- Students willappreciate the excitement of discovery that has accompanied important scientific developments.
- Students will demonstrate how scientific methodology can be used to analyze real-world science-related problems.
- Students will be able to evaluate scientific data and claims in order to make rational decisions on public-policy science issues that affect their community.
- Students will be able to express their thoughts (in oral, graphical, and written formats) on scientific topics clearly, including appropriate use of basic scientific vocabulary and effective interpretation of quantitative data.
- Students will be able to reflect rationally upon the interface between science and religion.
- Students will demonstrate sound scientific reasoning ability.

BIO 220A : Biological Diversity: Animals. (4:3:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Comparative organization and evolutionary significance of morphological, physiological, reproductive, and ecological differences in invertebrates and vertebrates. Laboratory included.

Course Outcomes

- Students will be able to discuss the broad patterns of the evolution of the clade Animalia, emphasizing the relationships among major sub-clades (phyla), the unique biological attributes that define these clades, and the novel changes in morphology over major transitions (unicellular to multicellular; acoelomate to pseudocoelomate to coelomate body plans, bilaterial vs radial symmetry, origins of exoskeletons, gill slits, notochord, crania & vertebral columns, etc.).
- Students will develop the skills necessary to understand the terminology of phylogenetic systematics and methods used to recover the "tree of life", the logic behind the hierarchy (i.e., the only possible outcome of the process of "descent with modification"), and critically apply evolutionary reasoning, including the use of phylogeny and tree-thinking, to formulate and test hypotheses that explain biological diversity.
- Students will have the intellectual tools to continue to explore related topics with confidence and understanding throughout their lives, and a deeper appreciation for the diversity of life on earth.

BIO 220B : Biological Diversity: Plants. (4:3:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Comparative organization and evolutionary significance of morphological, physiological, reproductive, and ecological differences in fungi, algae, and principal groups of land plants. Laboratory included.

Course Outcomes

- Students will be able to discuss differences between cyanobacteria, algae, bryophytes, non-seed vascular plants, gymnosperms, flowering plants, and fungi with repsect to their lifecycles, characteristic morphologies, and biological roles.
- Students will develop the skills necessary to understand and critically apply evolutionary logic including the use of phylogeny and tree-thinking to formulate and test hypotheses that explain biological diversity
- Students will be able to continue to explore related topics with confidence and understanding throughout their lives.

BIO 350 : Ecology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Distribution and abundance of organisms and their interactions with the physical and biotic components of the earth.

Course Outcomes

- Understand the major physical processes that form and characterize the biosphere, including global scale energy flow, the carbon cycle, climate, and soil formation.
- Understand the processes that drive major levels of organization of the biotic world, including energetics in the ecosystem, population dynamics, and species interactions.
- Understand the importance of writing as a way of synthesizing and solidifying critical thought.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Understand the importance of ecology to issues regarding human well-being
- See the connectivity and relevance of ecology to other fields of study

BIO 420 : Evolutionary Biology. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PWS 340

RECOMMENDED: Concurrent enrollment in Bio 421.

DESCRIPTION: Intensive examination of evolution as the conceptual cornerstone of biology.

Course Outcomes

- Students will be able to describe the history and development of evolutionary thought.
- Students will be able to list and describe the evidence for evolution and its required corollaries.
- Students will be able to describe the mechanisms by which evolution occurs. Provide detailed explanations of the the processes of evolution by mutation, migration, genetic drift, non-random mating, and natural selection.
- Students will be able to explain adaptation, providing examples from several different fields of biology (e.g., cell biology, physiology, conservation biology, bioinformatics, medicine, behavior, etc.).
- Students will be able to describe the history of life on earth. Identify major evolutionary transitions over time, and explain the tools and evidence that support current hypotheses of the history of life.

BIO 421 : Evolutionary Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240

DESCRIPTION: Hands-on applications and analytical tools of evolutionary biology; emphasizing inference methodology and evidence complementing the theoretical constructs introduced in Bio 520, including comparative anatomy, phylogenetic inference, population genetics, species concepts, and human evolution.

NOTE: Concurrent enrollment with Bio 420 is strongly recommended.

Course Outcomes

- Students will gain a better understanding of the basic principles of evolution within a population including selection, drift, and founder effects by using computer simulations.
- Students will have a deeper understanding of the LDS position on evolution.
- Students will learn the details of phylogenetic reconstruction, tree searching, DNA sequence alignment, and other bioinformatics tools for deciphering patterns of evolution.
- Students will learn the details of species concepts and the criteria used for identifying and diagnosing species.
- Students will gain hands-on experience with hominid fossils and gain an understanding of the evidence that elucidates the biological history of humans.

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.

DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the

various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes
- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

2. Complete one course from the following:

BIO 347 : Religion and the Environment. (3:3:3)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Introductory biology or instructor's consent.

DESCRIPTION: The role religion has played historically in defining how humans relate to nature and its creatures. How religion frames environmental values and ethics today, emphasizing LDS viewpoints.

Course Outcomes
- develop skill in writing about nature, religion, and the environment
- gain familiarity with the relationship between religion and environmental through reading primary literature
- come to appreciate approaches to faithful responses to caring for the Earth and its processes.

BIO 370 : Bioethics. (2:1:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Introductory biology course.

DESCRIPTION: In-depth lecture and small group discussion of varied bioethical issues. LDS Church positions emphasized when appropriate.

Course Outcomes
- Students will understand the ethical and philosophical underpinnings of bioethics and to develop ethical intuitions on bioethical issues.
- Students will learn the terminology, vocabulary, and objectives of bioethics.
- Students will understand the tools and approaches needed to make a bioethical decision and to communicate that decision in rationally informed ways.
- Students will understand the bioethical primary literature, to understand how to read case studies, and familiarity with the major issues being discussed in bioethics today.

BIO 470 : History and Philosophy of Biology. (3:1.5:1.5)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 350

DESCRIPTION: Development of fundamental generalizations of biology; nature of science; applications to major philosophical issues of current science.

Course Outcomes
- Students will demonstrate an understanding of the history of biology. This will include an understanding of the major figures and the historical development of modern biology. This will include having read original texts from the periods covered (Aristotle to Current Biology).
- Students will also have an understanding of principal philosophical issues confronting modern biology, including major research trends in philosophy of biology. The students will also have a grasp of what 'science' is, how it is practiced, and what expectations for knowledge can be justified using science.
- Students will have the ability to read and write about the primary literature both on the history, and the philosophy, of science. They will have a grasp of the terminology used in philosophy, and how philosophy of biology is currently practiced. Writing will be emphasized.

3. Complete the following:

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

Course Outcomes

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

Course Outcomes

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes

- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

Course Outcomes

- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates:

Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 352 or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.

NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes
- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

4. Complete one of the following options:
   a. Complete the following:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes
- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

Course Outcomes
- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MATH 112; or MATH 119

DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

Course Outcomes
- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)
- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous univariate random variable
- Understand the definition of a sampling distribution, identify the mean, variance, and shape of

the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for μ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for H0 : μ = μ0 from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment
- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

STAT 230 : Analysis of Variance. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

RECOMMENDED: Concurrent enrollment in MATH 112.

DESCRIPTION: Scientific method, statistical thinking, sources of variation, completely randomized design, ANOVA, power and sample size considerations, multiple testing, randomized complete blocks, factorial designs, interactions. Introduction to statistical software.

Course Outcomes
- Define the experimental unit, response variable, factor(s), and level(s) of a basic experiment
- Understand the role of randomization and replication in inferring causation
- Perform a completely randomized design and construct the ANOVA table in SAS and R
- Compute the minimum number of replicates in a completely randomized design to achieve a given level of power
- Compute pairwise tests of differences in means in SAS and R to understand a significant overall F-test
- Perform a randomized complete block design and construct the ANOVA table in SAS and R
- Perform a factorial design and construct the ANOVA table in SAS and R
- Explain a statistically significant interaction
- Describe the differences between a split plot and a two-way ANOVA

b. Complete the following:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes
- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Calculus or concurrent enrollment.

DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

Course Outcomes
- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

PHSCS 123 : Introduction to Waves, Optics, and Thermodynamics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 121 or equivalent. Calculus.
DESCRIPTION: Waves, thermal physics, optics, special relativity, and introduction to modern physics. Weekly lab.

Course Outcomes

- Solve problems and answer conceptual questions using the basics of fluid statics and dynamics, including Bernoulli's principle and Pascal's law.
- Answer conceptual questions and calculate changes in temperature, pressure, entropy and volume for quasistatic ideal gas processes and be able to determine work done and efficiency for gas engines, heat pumps, and refrigerators. Determine heat flow and temperatures in systems in steady state.
- Solve problems and answer conceptual questions involving waves, using concepts such as wave speed, wavelength, frequency, superposition, beats, and resonance. Solve wave interference problems.
- Find the location and magnification of images in single- and multiple-lens/mirror systems by calculation and by ray tracing, and be able to work general problems in optics using Snell's law and specular reflection.
- (Section 1) Solve problems and answer conceptual questions in basic modern physics including special relativity, and quantum mechanics and nuclear physics.
- (Section 2) Solve more advanced problems and answer conceptual questions in wave analysis, including calculating group and phases velocities, solving for Fourier coefficients of periodic functions, and frequencies of notes in the equal temperament musical scale. Solve problems in special relativity.

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MATH 112; or MATH 119
DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

Course Outcomes

- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)
- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous univariate random variable
- Understand the definition of a sampling distribution, identify the mean, variance, and shape of the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for μ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for H0 : μ = μ0 from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment
- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

c. Complete the following:

MATH 112 : Calculus 1. (4:5:0)
OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. : Honors Calculus 1.

Course Outcomes

PHSCS 105 : General Physics 1. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: High school algebra and trigonometry.
RECOMMENDED: Concurrent enrollment in Phscs 107.
DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes
There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 105 or equivalent.
RECOMMENDED: Concurrent enrollment in Phscs 108.
DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes
There are no course outcomes available

PHSCS 107 : General Physics Lab 1. (1:0:3)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Phscs 105 or concurrent enrollment.
DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 106 or concurrent enrollment
DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MATH 112; or MATH 119
DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

Course Outcomes
- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)
- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous univariate random variable
- Understand the definition of a sampling distribution, identify the mean, variance, and shape of the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for μ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for H0 : μ = μ0 from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment
- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

5. Complete a total of 12 hours of electives, a minimum of five hours from the organismal biology list (a), a minimum of five hours from the biological processes list (b), and as an option, up to two hours of approved mentoring credit (c).
   a. Organismal biology: complete a minimum of five hours from the following:
      BIO 352 : Introduction to Marine Biology. (3:3:0)

WHEN TAUGHT: Contact Department.
PREREQUISITE: BIO 220A
DESCRIPTION: Marine life, the sea as an environment, and research methods.

Course Outcomes
There are no course outcomes available

BIO 430 : Plant Classification and Identification. (4:3:3)
WHEN TAUGHT: Fall
PREREQUISITE: Bio 100 or Bio 130 or PDBio 120 or PWS 100 or instructor's consent.
DESCRIPTION: Principles of plant systematics, taxonomy, and classification, emphasizing family recognition by sight, terminology, and use of identification keys to the temperate flora.

Course Outcomes
- Students will apply correct vocabulary for describing plant parts and be able to deduce the meaning of new terms based on knowledge of common roots, prefixes, and suffixes.
- Students will recognize the major groups of vascular plants, be able to differentiate them by their principal characters, and understand their phylogenetic relationships.
- Students will identify by sight 40 families of flower plants as well as common families of ferns and gymnosperms, by recognizing differentiating features of each family.
- Students will gain proficiency in the use of keys and identification manuals for identifying any unknown plant to species.

BIO 441 : Entomology. (3:2:3)
WHEN TAUGHT: Fall
PREREQUISITE: Bio 220A or equivalent.
DESCRIPTION: External morphology, natural history, evolution, distribution, and phylogeny of insects. Insect collection required.

Course Outcomes
- Understand basic principles of morphology and systematics and apply these principles to your own knowledge of insects.
- Judge genetic relationships. Be able to recall current hypotheses of insect phylogeny at the ordinal level and have the tools needed to judge validity of new hypotheses of phylogeny that might be proposed. You will also study carefully the modifications associated with phylogenies that led to insect diversification and success.
- Understand details of insect morphology, and be well versed in both internal and external body structures.
- Recognize common insect families and be able to quickly identify them on sight.
- Gain or regain a sense of wonder for the natural world, especially as it relates to insects and other arthropods. Gain perspectives of the diversity and complexity in the insect world. Enhance your appreciation for the natural world we share with them.
- Learn life histories and specific collecting techniques for insects in their own habitats. You will learn how they fit in the natural world.
- Learn the protocols for detailed identificiations. Many insects will be totally new in appearance to you. You will use identification guides and illustrations to help you decide what the name of an insect is at the Order and Family levels.
- Use a variety of identification techniques to correctly identify insects and other arthropods. Throughout your life you will be asked by employers, friends, and family to answer the question, "What is this?" This course will give you these exact skills. A correct identification is a beginning step to learning more about a species and its relationships to the natural world and its pragmatic relationship to humans.

BIO 442 : Advanced Invertebrate Zoology. (5:6:0)
WHEN TAUGHT: Contact Department.
PREREQUISITE: BIO 220A
DESCRIPTION: Functional morphology, cladistics, ecology, behavior, and interrelationships of invertebrates.

Course Outcomes
There are no course outcomes available

BIO 443 : Ichthyology. (3:2:3)
WHEN TAUGHT: Fall Odd Yrs.
PREREQUISITE: BIO 220A
DESCRIPTION: Fish systematics, evolution, morphology, distribution, and natural history.

Course Outcomes
- Students will have a general understanding of fish respiration.
- Students will have a general understanding of fish body structure.
- Students will have a general understanding of fish food processing.
- Students will have a general understanding of fish behavior and communication.

BIO 445 : Herpetology. (4:3:2)
WHEN TAUGHT: Winter Even Yrs.
PREREQUISITE: BIO 220A
DESCRIPTION: Reptile and amphibian evolution, systematics, morphology, distribution, and natural

history. Lab emphasizes taxonomy, classification, and distribution of western U.S. species.

Course Outcomes
- Each student will gain a deeper understanding of some details of the origin of tetrapods, and the origin of the amniotes.
- Each student will gain a deeper understanding of the phylogenetic position of extinct and extant clades of amphibians & reptiles within the clade Vertebrate.
- Each student will acquire a detailed knowledge of the evolution and natural history (natural history, behavior, etc.) of the major clades of extant amphibians and reptiles .
- Through lab and field experiences, each student will acquire a detailed knowledge of diagnostic characters, taxonomy & distributions, and some aspects of ecology of native western species.
- Each student will acquire some knowledge of the conservation status of selected species in the US and abroad.

BIO 446 : (Bio - PWS) Ornithology. (3:2:3)

WHEN TAUGHT: Winter
PREREQUISITE: Bio 100 or Bio 130 or PDBio 120 or PWS 100 or equivalent or instructor's consent.
DESCRIPTION: Avian systematics, evolution, distribution, identification, and natural history.
NOTE: One three-day field trip required.

Course Outcomes
- Define ornithology and what it encompasses.
- Discuss the global diversity of birds in both form and function
- Articulate the current thinking regarding the evolution of birds.
- Identify 200 birds common to western North America.

BIO 447 : Mammalogy. (3:2:3)

WHEN TAUGHT: Fall
PREREQUISITE: BIO 220A; or PWS 344
DESCRIPTION: Mammalian diversity, evolution, distribution, and natural history. Two three-day field trips required.

Course Outcomes
- Be able to recognize the more common species of Utah mammals based on external and skull features
- Be able to recognize and identify most orders of mammals based on features of the skull
- Understand the evolutionary history of mammals and the modern diversity of mammalian orders
- Enhance skills directed toward understanding and interpreting original scientific literature dealing with mammalian biology

BIO 455 : Plant Ecology. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: BIO 220B
RECOMMENDED: Bio 350.
DESCRIPTION: Fundamental principles governing interactions among plants and their environments with respect to their success. Students will be able to apply their knowledge to land management, conservation and agriculture.

Course Outcomes
There are no course outcomes available

BIO 510 : Biological Systematics and Curation. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.
DESCRIPTION: Principles, methods, and tools of taxonomy and systematics as applied to species delimitation, specimen-based research, nomenclatural codes, and the curation of biological specimens.

Course Outcomes
- Students will be able to discuss species as the fundamental unit of biodiversity and the difference between species definitions and criteria used to delimit species.
- Students will be able to discuss basic philosophies of classification and the relationship between classification, phylogeny, and nomenclature.
- Students will gain proficiency with nomenclatural codes and their relationship to specimen-based research products such new species descriptions, monographs, floras, and faunas.
- Students will gain experience with a variety of specimen-based research tools.
- Students will understand responsibilities of biological collections management and curation.

BIO 511 : Lichenology. (3:2:3)

WHEN TAUGHT: Contact Department.
DESCRIPTION: Classification, morphology, and ecology on lichens. Field trip required.

Course Outcomes
- Research and characterize the nature of the lichen symbiosis.
- Develop a working knowledge of lichen biology.
- Demonstrate an understanding of the role of lichens as biomonitors of air quality.
- Develop basic skills for collecting, processing, and identifying lichens.
- Develop basic skills with:- Thin-layer chromatography – lichen secondary chemistry.- Molecular techniques – to characterize genetic patterns and relationships at the population level.
- Prepare research manuscripts for review and publication consideration.

- Present a research proposal for a project using lichens as air quality biomonitors.

BIO 512 : Angiosperm Phylogeny. (3:2:4)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Bio 430 or equivalent.

DESCRIPTION: Description, classification, phylogeny, and geographic distribution of flowering plant families.

Course Outcomes

- Students will be able to discuss the primary pattern of relationships among flowering plants as supported by contemporary research.â ¨â ¨
- Students will demonstrate proficiency in tree-thinking and the application of phylogenetic terminology in discussing angiosperm relationships.
- Students will demonstrate knowledge of world-wide flowering plant diversity, including examples of model organisms, convergence, and evolutionary novelties.
- Students will be able to discuss contemporary research in flowering plant diversity, including outstanding problems where additional research is needed.

BIO 541 : Aquatic Entomology. (4:2:4)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: Bio 441 or equivalent.

DESCRIPTION: Morphology, classification, biology, and functional ecology of aquatic insects. Field trips required.

Course Outcomes

- Develop an apprecitation for the diversity of the living aquatic insect world.
- Learn to become better stewards of the earth and its living inhabitants.
- Understanding of all aquatic biology.

MMBIO 465 : Virology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBio 261 or equivalent.

DESCRIPTION: Basic principles of virology, emphasizing selected molecular aspects of virus life cycles and disease processes.

Course Outcomes

- Be able to answer basic questions about Virology: Why are viruses organized as they are? How do viruses replicate? How do viruses cause disease? What are the interactions between viruses and the host immune system? How to prevent/treat/cure viral infections? How can viruses be used as tools to study biological processes and for gene transfer? How can an understanding of viruses help you in your future career? *Relates to Program Learning Outcome: “Exhibit mastery of four of the principal areas of the discipline”, one of which is Virology.
- Understand experimental tools used to study viruses (these are broadly applicable to molecular biology, cell biology, and microbiology) and be able to develop experiments and interpret data.*Relates to Program Learning Outcomes: “Devise experiments with appropriate hypotheses and controls” and “Interpret experiments from primary scientific literature”
- Write about a current, pressing issue in the field of Virology.*Relates to Program Learning Outcome: “Communicate scientific information”
- Understand how research of viruses “by study and also by faith” can lead to alleviation of human disease and suffering.*Relates to Program Learning Outcome: “Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological processes”

b. Biological processes: complete a minimum of five hours from the following:

BIO 352 : Introduction to Marine Biology. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: BIO 220A

DESCRIPTION: Marine life, the sea as an environment, and research methods.

Course Outcomes

There are no course outcomes available

BIO 370 : Bioethics. (2:1:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Introductory biology course.

DESCRIPTION: In-depth lecture and small group discussion of varied bioethical issues. LDS Church positions emphasized when appropriate.

Course Outcomes

- Students will understand the ethical and philosophical underpinnings of bioethics and to develop ethical intuitions on bioethical issues.
- Students will learn the terminology, vocabulary, and objectives of bioethics.
- Students will understand the tools and approaches needed to make a bioethical decision and to communicate that decision in rationally informed ways.
- Students will understand the bioethical primary literature, to understand how to read case studies, and familiarity with the major issues being discussed in bioethics today.

BIO 380 : Comparative Animal Physiology and Anatomy. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 220A or instructor's consent.

DESCRIPTION: Structure and function of animal organ systems; structural and physiological responses to demands of and changes in environment; evolutionary constraints on anatomy and physiology.

Course Outcomes

- Students will demonstrate a fundamental knowledge of comparative vertebrate animal physiology and anatomy.
- Students will develop critical thinking skills while learning concepts and understanding the tools used by comparative vertebrate animal physiologists and anatomists to study function and structure.
- Students will use physiological and anatomical knowledge to enhance their personal lives.
- Students will use their skills and knowledge in comparative vertebrate animal physiology and anatomy to secure employment or to advance in higher education in biology-related disciplines.
- Students will develop an understanding of physiologic isotopic techniques utilized to indicate energy sources, trophic levels, body water, and latitudinal and altitudinal animal migration reflected by stable isotopes of carbon, nitrogen, hydrogen and oxygen.

BIO 450 : Conservation Biology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 220A & BIO 350; or BIO 220B & BIO 350

DESCRIPTION: Scientific principles of conservation: applying population genetics, and phylogenetic and ecological theory to preservation of biological diversity; developing sustainable ecological systems compatible with human resource use.

Course Outcomes

- Apply an understanding of ecological processes to conservation of populations, species, and ecosystems.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Demonstrate the ability to apply the scientific method and analytical thinking to ecological and conservation issues.
- Demonstrate the ability to synthesize literature relevant to a topic in conservation bioloigy
- Demonstrate the ability to write a scientific term paper

BIO 452 : Introduction to Marine Sciences. (4:3:1)

WHEN TAUGHT: Contact Department. ; Spring Even Yrs.

PREREQUISITE: Instructor's consent.

DESCRIPTION: Principles of physical oceanography, biodiversity, and ecology of numerous ocean habitats. Extensive field trips.

Course Outcomes

There are no course outcomes available

BIO 453 : Development of Marine Animals. (3:0:6)

WHEN TAUGHT: Contact Department.

PREREQUISITE: BIO 352; Instructor's consent.

DESCRIPTION: Culturing, studying, and reporting on the development of eggs, embryos, and larvae of marine animals.

Course Outcomes

There are no course outcomes available

BIO 463 : Genetics of Human Disease. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 340

DESCRIPTION: Examining the application of genetics to understanding and treatment of human disease. Functional consequences of mutations; use of model organisms; linkage and association analysis of complex traits; pharmacogenetics; ethical considerations.

Course Outcomes

- Understand and explain the different types of genetic variants, how they can be typed and how they can be used to understand the genetic architecture of human disease.
- Understand linkage disequilibrium in the human genome and the role it plays in the search for genetic risk factors for human disease
- Understand and use basic statistics and software for analyzing the correlation between genetic markers and risk for disease.
- Understand and explain how model organisms contribute to our understanding of the genetics of human disease.
- Demonstrate the ability to obtain, aggregate and present information about the current knowledge of the genetics of a human disease.

BIO 465 : Bioinformatics and Proteomics. (3:2:1)

WHEN TAUGHT: Winter

PREREQUISITE: BIO 365

DESCRIPTION: 3-D protein structural comparisons, hidden Markov models for database comparisons, homology detection, multiple sequence analyses, and protein family comparisons. Exercises in computer programming in genomics.

Course Outcomes

- Students will learn and demonstrate mastery of advanced analytical bioinformatics techniques, including genome assembly, genome annotation, and protein analyses.
- Demonstrate ability to use and evaluate literature databases and primary literature directed to the bioinformatics community in terms of newly developed software, analytical algorithms, application to empirical data, etc.
- Apply and develop computational skills in secondary (i.e., helices, etc.) and tertiary (i.e., folding, etc.) prediction, and 3-dimensional (i.e., x-ray crystal structures, etc.) modeling of protein structures.
- Apply evolutionary concepts to modeling DNA/proteins to evaluate and/or predict function, utilizing 3D structures, physical and chemical amino acid properties, etc.
- Apply existing and develop new tools for genome assembly and annotation from next-generation DNA sequencing projects

BIO 470 : History and Philosophy of Biology. (3:1.5:1.5)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 350

DESCRIPTION: Development of fundamental generalizations of biology; nature of science; applications to major philosophical issues of current science.

Course Outcomes

- Students will demonstrate an understanding of the history of biology. This will include an understanding of the major figures and the historical development of modern biology. This will include having read original texts from the periods covered (Aristotle to Current Biology).
- Students will also have an understanding of principal philosophical issues confronting modern biology, including major research trends in philosophy of biology. The students will also have a grasp of what 'science' is, how it is practiced, and what expectations for knowledge can be justified using science.
- Students will have the ability to read and write about the primary literature both on the history, and the philosophy, of science. They will have a grasp of the terminology used in philosophy, and how philosophy of biology is currently practiced. Writing will be emphasized.

BIO 475 : Plant Developmental Biology. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: PWS 340

RECOMMENDED: Bio 220B.

DESCRIPTION: Developmental mechanisms controlling plant development, with particular emphasis on genetic and molecular regulation.

Course Outcomes

There are no course outcomes available

BIO 525 : Animal Disease, Biosecurity, and Zoonoses. (3:3.0:0)

WHEN TAUGHT: Winter

PREREQUISITE: Bio 380 or instructor's consent.

DESCRIPTION: Animal disease emphasizing prevention, organ systems affected, biosecurity, and zoonotic potential.

Course Outcomes

- Comparative pathophysiology will be taught using canine, feline, bovine, ovine, caprine, equine, lab animals, and wildlife examples
- Understand basic animal pathophysiology of disease on an organ system basis and preventive measures to maintain animal health
- Identify biosecurity practices to prevent animal disease
- Differentiate between zoonoses, sapronoses and anthroponoses and understand how to institute preventive measures and management practices to avert these health problems
- Design a herd health program with preventive measures that addresses nutrition, sanitation, housing, ventilation, lighting, and other components for a particular species the student wants to work with as a producer
- Understand how to institute good management procedures that can prevent the occurrence of animal disease
- Develop a basic knowledge of animal immunology as it pertains to disease induction and prevention, with natural and artificial immunity practices that should be implemented to enhance disease prevention, and nutritional practices to optimize animal immunity

BIO 550 : Physiological and Chemical Ecology. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Bio 350 or equivalent.

DESCRIPTION: Ecophysiological response of plants to their environment.

Course Outcomes

- Students will be able to apply sound reasoning using their biological literacy of the above disciplines in evaluating the experimental design and outcomes of peer-reviewed articles.
- Students will understand and be able to explain basic biological concepts in the fields of

physiological and chemical ecology.
- Students will learn how to effectively communicate the arguments and evidences presented in the scientific literature of these disciplines, and evaluate the contribution of the research to advances in the field of chemical ecology.

BIO 556 : Limnology. (3:2:4)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Bio 350, Chem 106; or equivalents.

DESCRIPTION: Lakes, reservoirs; their biota and physical/chemical properties.

Course Outcomes
- Understand the major physical processes that form and characterize lentic habitats.
- Understand the dominant chemical processes that occur in lake systems.
- Understand how organisms adapt to the above physical and chemical constraints.
- Gain teaching experience through preparing a Powerpoint presenting your study presentation to the class.
- Experience pursuing a focused research topic from the initial question to a competed report.

BIO 557 : Stream and Wetland Ecology. (4:3:4)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Bio 350, Chem 106; or equivalent.

DESCRIPTION: Stream and wetland ecology; their biota and their physical/chemical properties.

Course Outcomes
- Develop an understanding of streams and wetlands within the broader context of ecology and conservation.
- Become familiar with the major conservation issue in streams and wetlands and the underlying ecological concepts.
- Initial exposure to the current literature.
- Develop skills related to critical thinking. That is, learn how to: a) read critically and summarize information, b) draw conclusions and synthesize information to develop new questions and hypotheses, and c) design experiments or comparative studies. It is important to start early to learn how to think, read, and write critically.

BIO 560 : Population Genetics. (4:4:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Bio 420 or equivalent.

DESCRIPTION: Basic principles of population genetics applied to natural populations; drift, selection, and nonrandom mating; inferring population subdivision, migration, and gene flow.

Course Outcomes
- Students will gain a general introduction to the field a population genetics.
- Students will experience the broad application of population genetics to diverse fields from ecology to medicine.
- Students will manipulate and analyze population genetic data, especially molecular data.

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes
- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

MMBIO 363 : Microbial Ecology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 130; or MMBIO 151; or PDBIO 120

DESCRIPTION: Natural history of a microbe; its distribution and abundance. Critical influence of scale and perspective in determining underlying mechanisms.

Course Outcomes
There are no course outcomes available

MMBIO 461 : Advanced Bacterial Physiology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481 & MMBIO 151

DESCRIPTION: Principles of prokaryotic physiology, including cell structure and function, gene regulation, and biochemical processes; focusing on the unique aspects of prokaryotic biology.

Course Outcomes

- Students will demonstrate an advanced understanding of selected topics in microbial physiology (cell structure, growth, biosynthesis, transport, etc.) through their participation in classroom discussions, writing assignments and oral presentations.
- Students will demonstrate the ability to read, comprehend and communicate current research in microbial physiology by making Powerpoint presentations to the class.
- Students will write a scientific review article on a topic of their choice related to microbial physiology.

PDBIO 360 : Cell Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Fundamentals of cell structure and function with reference to analytical methods used by cell biologists. Practice in designing, executing, and interpreting relative experiments.

Course Outcomes

- Students will demonstrate knowledge of the molecular architecture of the nucleus, including the nuclear envelope, nucleoplasm and nucleolus, chromatin, and the nuclear pore.
- Students will demonstrate an understanding of protein transport, including nuclear import and export and vesicular transport through the secretory and sorting pathways.
- Students will demonstrate knowledge of the molecular and cellular structure and dynamics of cytoskeletal systems.
- Students will be able to apply the basic cell biological principles in outcomes 1-3 to more complicated cellular processes, including cell adhesion, cell migration, cell polarity, cell division, cancer, and development.
- Students will demonstrate the ability to generate hypothesis about how cell biological systems work at the molecular level and design experiments that test that hypothesis.
- Students will demonstrate competence in interpreting original raw data from cell biology experiments, including microscopy, protein biochemistry, molecular biology, and genetics strategies
- Students will demonstrate the ability to critically evaluate primary cell biology literature, including the ability to evaluate the design and interpretation of experimental data.

PDBIO 362 : Advanced Physiology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220

DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.

NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes

- Students will manifest an understanding of how structures at the molecular level lead to properties associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

PWS 440 : Plant Physiology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: GE Biological Science requirement; college chemistry

RECOMMENDED: Chem 285; or 351, 352.

DESCRIPTION: Photosynthesis, respiration, water relations, mineral nutrition, growth of flowering plants.

Course Outcomes

- Students will be fluent in understanding plant function at the molecular, biochemical and whole plant levels
- Students will understand the connections between plant function and ecosystem processes
- Student will practice applying the scientific method in order to develop critical thinking and problem solving skills
- Student will engage in learning activities that increase there writing and speaking proficiency

Note: Students cannot count both Bio 370 and 470 in this requirement.

c. Approved mentoring credit: as an option, complete up to two hours from the following:

BIO 392R : Preveterinary Preceptorship. (3:1:5)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Supervised on-the-job exposure to veterinary medicine under a clinical setting, supplemented with academic assignments.

Course Outcomes

- I. Skills student should master during the preveterinary medicine preceptorship experience:Husbandry: feeding, sanitation, handling, breed recognitionRestraint of animals for

examination, treatment and radiographyLogging medical data and recording information in patient chartsGrooming for medical reasonsObserve and recognize normal and abnormal body functions and vital signsConcepts of animal welfare and humane treatment of animalsIntroduce methods and explain necessity of animal population controlObtain knowledge of and competency with routine preventive medicine including vaccination protocols, parasite identification-treatment-prevention, routine physical examination, geriatric health care

- II. The student should observe and participate in these activities:Client-doctor relations and dialogue; demonstration of veterinary ethics and integrity; diagnostic thought process and rationalePatent examination; administration of medication and therapy; collection of body fluids and specimensMedical record information entryClinical diagnostic laboratory techniquesDeveloping and interpreting radiographsSurgical suite protocols:preparation of instrument packs, drapes, surgical gownsaseptic techniqueanesthesia administration and monitoringsurgical preparation of patientsurgery protocols and surgical assistanceintensive and post-operative nursing careEuthanasia
- III. Areas of hospital student should receive exposure to:Kennel and quarantine wardsTreatment areasSurgery and examination roomsOffice proceduresTelephone etiquetteLaboratory and pharmacyLibrary search and literature review of clinical case information and current treatments based on veterinary research

BIO 494R : Mentored Research. (1-6:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Supervisor's consent.

DESCRIPTION: Independent student research under faculty supervision.

Course Outcomes

- Students will demonstrate an understanding of the methods of scientific inquiry.
- Students will demonstrate an ability to design and implement a research project in a specialized area.
- Students will effectively interpret, analyze, and present results of experimentation to others.
- Students will show an appreciation for and understanding of the specialized field.

: Aquatic Biology.

Course Outcomes

: Bioinformatics.

Course Outcomes

: Ecology.

Course Outcomes

: Electron Microscopy.

Course Outcomes

: Entomology.

Course Outcomes

: Evolution.

Course Outcomes

: Marine Biology.

Course Outcomes

: Medicinal Botany.

Course Outcomes

: Plant Biochemistry.

Course Outcomes

: Fungal Biology.

Course Outcomes

BIO 559R : Advanced Topics in Ecology and Evolution. (1-6:ARR:ARR)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Instructor's consent.

DESCRIPTION: Current topics in ecology, evolution, and systematics.

Course Outcomes

- Students will demonstrate an understanding of the methods of scientific inquiry.
- Students will demonstrate an ability to design and implement a research project in ecology and evolution.

Students will effectively interpret, analyze, and present results of experimentation to others.
- Students will show an appreciation for and understanding of ecology and evolution.

: Advanced Ecology.

Course Outcomes

: Physiological Ecology.

Course Outcomes

: Tropical Biology.

Course Outcomes

: Biological Science Education.

Course Outcomes

: Field Biology.

Course Outcomes

LFSCI 399R : Academic Internship. (.5-6:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

DESCRIPTION: Approved experiential learning.

Course Outcomes
- 1. Demonstrate critical or analytical thinking skills by analyzing and interpreting experimental data.2. Exhibit proficient writing skills by producing a portfolio, research paper, scientific journal article, and/or a scientific poster. 3. Critically read scientific literature and evaluate the ability of an argument or evidence to support a conclusion.4. Function as a collaborative team member by participating in student mentored learning groups or research groups.

LFSCI 490R : Special Problems. (1-6:0.0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Life Sciences Student Services consent.

Course Outcomes
- 1. The student is expected to have this experience preapproved by Life Science Student Services.2. Develop a research or problem-solving component which is mutually agreed upon by Life Science Student Services and the student.3. Develop a portfolio during the experience. This portfolio should discuss topics including but not limited to: an abstract of the project, a description of methods and materials (include tables, graphs, pictures or other visuals as appropriate), results, summary, and significance of the laboratory experience. The portfolio must be a minimum of 5-6 pages in report form.

LFSCI 494R : Mentored Research. (1-6:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

Course Outcomes
- 1. Demonstrate critical or analytical thinking skills by analyzing and interpreting experimental data.2. Exhibit proficient writing skills by producing a portfolio, research paper, scientific journal article, and/or scientific poster.3. Critically read scientific literature and evaluate the ability of an argument or evidence to support a conclusion.4. Function as a collaborative team member by participating in student mentored learning groups or research groups.

LFSCI 499R : Senior Honors Thesis. (1-6:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

DESCRIPTION: Topic to be cleared with Honors Program Office and Life Sciences Student Services.

Course Outcomes
- 1. Develop a research problem and have the prospectus evaluated by the Honors Program and Life Science Student Services.2. Prepare a thesis following the Honors Program protocol.

6. Complete an exit interview.

Recommended Courses for Career Options

Botany

Students seeking career and graduate school opportunities in botanical fields should build their electives on a foundation of basic plant biology courses. Coupled with the broad integrative biology core, the following courses provide students with the greatest diversity of options for postgraduate work or training in plant biology:

Bio 430, 455, 475, 510, 511, 512.

PWS 282, 283, 355, 440, 515.

Students completing Bio 430 and PWS 330 and 355 often find summer employment opportunities with government land agencies.

Preveterinary Medicine

Beverly L. Roeder, Advisor
386 WIDB (801) 422-6873

Students interested in applying to veterinary medicine schools should take the following courses as part of the biology major:

BIO 270 : Animal Restraint. (1:0:2)

WHEN TAUGHT: Winter

DESCRIPTION: Restraint and first aid techniques for pet, laboratory, domestic, and wild animals.

Course Outcomes

- Know how to safely restrain domestic animals and wildlife species
- Understand basic animal restraint techniques for a number of domestic and wildlife species
- Understand why certain restraint techniques work with only certain animals and not others
- Develop a basic knowledge of animal chemical restraint methods and their indications
- Understand why the use of pharmaceutical agents by lay persons is not advocated without a veterinarian's prescription or special knowledge and training of non-veterinarian personnel, such as wildlife biologists

BIO 291R : Veterinary Medicine Seminar. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: Preview into veterinary medicine as a profession. Application procedure and preparation for veterinary school.

Course Outcomes

- Develop a working knowledge of the educational requirements and preveterinary medicine prerequisite coursework required by the majority of USA colleges of veterinary medicine (CVM)
- Learn how to navigate the application process for admission to colleges of veterinary medicine, understand the different sections of the online veterinary medicine college application service (VMCAS) form, and know what information is needed for supplemental application forms required by individual CVMs
- Knowledge of state contracts, the Western Interstate Commission for Higher Education (WICHE) Professional Student Exchange Program (PSEP), state residency requirements
- Understand the cost of a veterinary medicine education, and learn how to minimize educational debt with scholarships, grants, research stipends, and military or government programs
- Career alternatives, general or specialty practices in veterinary medicine
- Understand the issues concerning animal welfare, animal research, and responsibilities as a member of the veterinary profession
- Statistics with data on need (based on demographic or other data), employment placement, salary, employer requirements, market research information, and advanced degrees to enhance employment opportunities in veterinary medicine

BIO 392R : Preveterinary Preceptorship. (3:1:5)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Supervised on-the-job exposure to veterinary medicine under a clinical setting, supplemented with academic assignments.

Course Outcomes

- I. Skills student should master during the preveterinary medicine preceptorship experience:Husbandry: feeding, sanitation, handling, breed recognitionRestraint of animals for examination, treatment and radiographyLogging medical data and recording information in patient chartsGrooming for medical reasonsObserve and recognize normal and abnormal body functions and vital signsConcepts of animal welfare and humane treatment of animalsIntroduce methods and explain necessity of animal population controlObtain knowledge of and competency with routine preventive medicine including vaccination protocols, parasite identification-treatment-prevention, routine physical examination, geriatric health care
- II. The student should observe and participate in these activities:Client-doctor relations and dialogue; demonstration of veterinary ethics and integrity; diagnostic thought process and rationalePatent examination; administration of medication and therapy; collection of body fluids and specimensMedical record information entryClinical diagnostic laboratory techniquesDeveloping and interpreting radiographsSurgical suite protocols:preparation of instrument packs, drapes, surgical gownsaseptic techniqueanesthesia administration and monitoringsurgical preparation of patientsurgery protocols and surgical assistanceintensive and post-operative nursing careEuthanasia
- III. Areas of hospital student should receive exposure to:Kennel and quarantine wardsTreatment areasSurgery and examination roomsOffice proceduresTelephone etiquetteLaboratory and pharmacyLibrary search and literature review of clinical case information and current treatments based on veterinary research

BIO 525 : Animal Disease, Biosecurity, and Zoonoses. (3:3.0:0)

WHEN TAUGHT: Winter

PREREQUISITE: Bio 380 or instructor's consent.

DESCRIPTION: Animal disease emphasizing prevention, organ systems affected, biosecurity, and zoonotic potential.

Course Outcomes

- Comparative pathophysiology will be taught using canine, feline, bovine, ovine, caprine, equine, lab animals,

and wildlife examples
- Understand basic animal pathophysiology of disease on an organ system basis and preventive measures to maintain animal health
- Identify biosecurity practices to prevent animal disease
- Differentiate between zoonoses, sapronoses and anthroponoses and understand how to institute preventive measures and management practices to avert these health problems
- Design a herd health program with preventive measures that addresses nutrition, sanitation, housing, ventilation, lighting, and other components for a particular species the student wants to work with as a producer
- Understand how to institute good management procedures that can prevent the occurrence of animal disease
- Develop a basic knowledge of animal immunology as it pertains to disease induction and prevention, with natural and artificial immunity practices that should be implemented to enhance disease prevention, and nutritional practices to optimize animal immunity

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes
- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

Course Outcomes
- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 352 or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.

NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes
- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

(1 hour required)

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes

Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

ENGL 316 : Technical Communication. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: First-year writing, junior or senior status.
DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.
NOTE: Carries GE Advanced Written and Oral Communication credit.

Course Outcomes
- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes
- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

(or higher)

MMBIO 221 : General Microbiology. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Any biology course.
RECOMMENDED: Any chemistry course.
DESCRIPTION: Microbial world, emphasizing communicable diseases, their causes and control.
NOTE: Recommended for students seeking a liberal education in microbiology who do not have the prerequisites to take the more advanced courses.

Course Outcomes
- Explain and discuss the ways by which microbiologists study microorganisms.
- Discuss the principle infectious diseases that affect mankind, including how they are transmitted, treated, controlled and prevented.
- Differentiate between the types of microorganisms by identifying relevant structure and their function in the biosphere.
- Propose microbial solutions to global problems.
- Describe how the human body defends itself against infectious agents.

MMBIO 222 : General Microbiology Laboratory. (1:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: MMBio 221 or concurrent enrollment.

Course Outcomes

- Use the bright field microscope to view and interpret microbiological specimens
- Use proper aseptic techniques int he handling and transfer of microbiological specimens
- Use standard microbiological media to culture and identify common microbiological specimens
- Use standard microbiology laboratory equipment correctly
- Follow an experimental protocol, collect and organize data, present data in an appropriate form, assess the validity of the data, and draw appropriate comclusions based on the results
- Integrate information and skills gained int eh course to make informed judgements about the role of microorganisms in everyday life
- Use accepted safety protocols when handling microbiological specimens and chemicals

NDFS 330 : Comparative Animal Nutrition. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Comparative digestion, absorption, and utilization of nutrients and nutritional applications of domestic, pet, and wildlife species.

Course Outcomes

- Demonstrate an understanding of the diverse digestive systems in the animal kingdom.
- Demonstrate an understanding how changes in digestive systems affect both nutrient requirements and affect feeding types and systems.
- Apply the roles of nutrients in cellular metabolism.
- Explain how nutrient deficiencies affect body function and performance.
- Demonstrate knowledge of animal feed formulation.

PDBIO 484 : Human Embryology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PDBio 360 or equivalent.

RECOMMENDED: PDBio 325.

DESCRIPTION: Developmental milestones of prenatal life: etiology of congenital malformations, emphasizing molecular and cellular changes and their functional consequences.

Course Outcomes

- Students will identify the developmental trajectories of the various organ systems and why abnormalities at any step in the lineage of organogenesis may cause birth defects.
- Students will be able to communicate with health professionals effectively regarding embryonic events from conception to birth and the ramifications of each event in instances of health and disease.
- Students will demonstrate how signaling between participating cells leads to important events during the first, second, third, and fourth weeks of development.

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

TMA 150 : Public Speaking. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Principles and methods of public speaking; speaking experiences.

Course Outcomes

- Develop analytical listening and observation skills.
- Know how to speak publicly so your audience will really listen and understand.
- Construct and deliver effective extemporaneous public speeches.
- Manage speech anxiety and effective use nonverbal communication to inform, persuade, enlighten, and impact your audience.
- Be able to produce and employ effective visual aids in your presentations.

*Hours include courses that may fulfill university core requirements.

The Discipline

The conservation biology major is designed to provide students with a broad scientific background in preparation for a career in conservation fields. Graduates will be equipped to deal with the issues and problems of sustainable resource usage, conservation of endangered biota, long-term preservation of biodiversity, development and preservation of natural resources, and management and conservation of ecosystems. This major is recommended for those seeking graduate programs in a variety of areas of biology, especially conservation biology. The major also prepares students well for obtaining positions in Non-Government Organizations (NGOs) focusing on conservation biology.

Students majoring in conservation biology should consider completing a minor to strengthen their technical or applied sociological skills. Possible minors include anthropology, geography (geography; geographic information systems; urban, rural, and environmental planning), international development, management (global management), political science, recreation management and youth leadership (nonprofit management), sociology, women's studies.

Program Requirements | View MAP | View Program Outcomes

1. Complete the following:

BIO 130 : Biology. (4:3:1)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: General biology course with laboratory for biology majors. Introduction to disciplines in the life sciences including methods for scientific inquiry, biochemical dynamics, cell structure and function, evolutionary theory, bioenergetics, and ecological interactions.

Course Outcomes

- Students will demonstrate basic literacy in the language of science and an understanding of the foundational theories of biology (i.e., be able to formulate appropriate hypotheses and predictions to test specific biological phenomena and use appropriate vocabulary to do so) o Atomic Molecular Theoryo Cell Theoryo Theories of Photosynthesis, Fermentation, and Cellular Respirationo Cell Division and Meiotic Theorieso Chromosomal and Mendelian Theories of Inheritanceo Watson and Crick's Theory of DNA Structure and Replicationo Protein Synthesis Theoryo Darwin's Theory of Natural Selectiono Hardy-Weinberg Theoryo Ecosystem Theoryo Population Growth Theoryo Competitive Exclusion and Behavioral Theory
- Students will demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strengths and weaknesses of this process.
- Students willappreciate the excitement of discovery that has accompanied important scientific developments.
- Students will demonstrate how scientific methodology can be used to analyze real-world science-related problems.
- Students will be able to evaluate scientific data and claims in order to make rational decisions on public-policy science issues that affect their community.
- Students will be able to express their thoughts (in oral, graphical, and written formats) on scientific topics clearly, including appropriate use of basic scientific vocabulary and effective interpretation of quantitative data.
- Students will be able to reflect rationally upon the interface between science and religion.
- Students will demonstrate sound scientific reasoning ability.

BIO 220A : Biological Diversity: Animals. (4:3:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Comparative organization and evolutionary significance of morphological, physiological, reproductive, and ecological differences in invertebrates and vertebrates. Laboratory included.

Course Outcomes

- Students will be able to discuss the broad patterns of the evolution of the clade Animalia, emphasizing the relationships among major sub-clades (phyla), the unique biological attributes that define these clades, and the novel changes in morphology over major transitions (unicellular to multicellular; acoelomate to pseudocoelomate to coelomate body plans, bilaterial vs radial symmetry, origins of exoskeletons, gill slits, notochord, crania & vertebral columns, etc.).
- Students will develop the skills necessary to understand the terminology of phylogenetic systematics and methods used to recover the "tree of life", the logic behind the hierarchy (i.e., the only possible outcome of the process of "descent with modification"), and critically apply evolutionary reasoning, including the use of phylogeny and tree-thinking, to formulate and test hypotheses that explain biological diversity.

- Students will have the intellectual tools to continue to explore related topics with confidence and understanding throughout their lives, and a deeper appreciation for the diversity of life on earth.

BIO 220B : Biological Diversity: Plants. (4:3:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Comparative organization and evolutionary significance of morphological, physiological, reproductive, and ecological differences in fungi, algae, and principal groups of land plants. Laboratory included.

Course Outcomes

- Students will be able to discuss differences between cyanobacteria, algae, bryophytes, non-seed vascular plants, gymnosperms, flowering plants, and fungi with repsect to their lifecycles, characteristic morphologies, and biological roles.
- Students will develop the skills necessary to understand and critically apply evolutionary logic including the use of phylogeny and tree-thinking to formulate and test hypotheses that explain biological diversity
- Students will be able to continue to explore related topics with confidence and understanding throughout their lives.

BIO 347 : Religion and the Environment. (3:3:3)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Introductory biology or instructor's consent.

DESCRIPTION: The role religion has played historically in defining how humans relate to nature and its creatures. How religion frames environmental values and ethics today, emphasizing LDS viewpoints.

Course Outcomes

- develop skill in writing about nature, religion, and the environment
- gain familiarity with the relationship between religion and environmental through reading primary literature
- come to appreciate approaches to faithful responses to caring for the Earth and its processes.

BIO 350 : Ecology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Distribution and abundance of organisms and their interactions with the physical and biotic components of the earth.

Course Outcomes

- Understand the major physical processes that form and characterize the biosphere, including global scale energy flow, the carbon cycle, climate, and soil formation.
- Understand the processes that drive major levels of organization of the biotic world, including energetics in the ecosystem, population dynamics, and species interactions.
- Understand the importance of writing as a way of synthesizing and solidifying critical thought.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Understand the importance of ecology to issues regarding human well-being
- See the connectivity and relevance of ecology to other fields of study

BIO 420 : Evolutionary Biology. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PWS 340

RECOMMENDED: Concurrent enrollment in Bio 421.

DESCRIPTION: Intensive examination of evolution as the conceptual cornerstone of biology.

Course Outcomes

- Students will be able to describe the history and development of evolutionary thought.
- Students will be able to list and describe the evidence for evolution and its required corollaries.
- Students will be able to describe the mechanisms by which evolution occurs. Provide detailed explanations of the the processes of evolution by mutation, migration, genetic drift, non-random mating, and natural selection.
- Students will be able to explain adaptation, providing examples from several different fields of biology (e.g., cell biology, physiology, conservation biology, bioinformatics, medicine, behavior, etc.).
- Students will be able to describe the history of life on earth. Identify major evolutionary transitions over time, and explain the tools and evidence that support current hypotheses of the history of life.

BIO 421 : Evolutionary Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240

DESCRIPTION: Hands-on applications and analytical tools of evolutionary biology; emphasizing inference methodology and evidence complementing the theoretical constructs introduced in Bio 520, including comparative anatomy, phylogenetic inference, population genetics, species concepts, and human evolution.

NOTE: Concurrent enrollment with Bio 420 is strongly recommended.

Course Outcomes

- Students will gain a better understanding of the basic principles of evolution within a population including selection, drift, and founder effects by using computer simulations.
- Students will have a deeper understanding of the LDS position on evolution.

Students will learn the details of phylogenetic reconstruction, tree searching, DNA sequence alignment, and other bioinformatics tools for deciphering patterns of evolution.
- Students will learn the details of species concepts and the criteria used for identifying and diagnosing species.
- Students will gain hands-on experience with hominid fossils and gain an understanding of the evidence that elucidates the biological history of humans.

BIO 450 : Conservation Biology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 220A & BIO 350; or BIO 220B & BIO 350

DESCRIPTION: Scientific principles of conservation: applying population genetics, and phylogenetic and ecological theory to preservation of biological diversity; developing sustainable ecological systems compatible with human resource use.

Course Outcomes
- Apply an understanding of ecological processes to conservation of populations, species, and ecosystems.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Demonstrate the ability to apply the scientific method and analytical thinking to ecological and conservation issues.
- Demonstrate the ability to synthesize literature relevant to a topic in conservation biologigy
- Demonstrate the ability to write a scientific term paper

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes
- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.

DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes
- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes
- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MATH 112; or MATH 119

DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random

variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

Course Outcomes

- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)
- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous univariate random variable
- Understand the definition of a sampling distribution, identify the mean, variance, and shape of the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for μ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for H0 : μ = μ0 from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment
- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

2. Complete one of the following chemistry options:

Either

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

Course Outcomes

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

Course Outcomes

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision

allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 285 : Introductory Bio-organic Chemistry. (4:4:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

DESCRIPTION: Principles of organic chemistry and biochemistry relating to biomolecule structure and function.

Course Outcomes
- Students will understand the metabolism of carbohydrates, lipids, and proteins in humans. They will be able to describe in structures and words the metabolism of sugars through the pathways of glycolysis, the citric acid cycle, and the electron transport chain.
- Students will understand the structure and reactivity of organic functional groups, such as alcohols, aldehydes, carboxylic acids, and amides. For example, students will learn that aldehydes and ketones typically undergo addition reactions.
- Students will understand the structure and reactivity of the biomolecules that have those functional groups. For example, students will be able to demonstrate that carbohydrates are aldehydes and ketones that undergo addition reactions to form hemiacetals and polysaccharides with acetal linkages.

Or

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes
- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

Course Outcomes
- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

Course Outcomes
- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.
NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes
- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: CHEM 351; or CHEM 351M
DESCRIPTION: Continuation of Chem 351.

Course Outcomes
- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Chem 352 or concurrent enrollment (preferred).
DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.
NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes
- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

Note: Students considering graduate or professional school should choose the second option.

3. Complete at least five hours from the following tools courses:

BIO 555 : Evolutionary and Ecological Modeling. (2:2:0)
WHEN TAUGHT: Winter Even Yrs.
PREREQUISITE: Senior status in bioinformatics program or graduate status; Stat 511, 512, or equivalent; instructor's consent.
DESCRIPTION: Using models in ecology. Practical experience in analytical, simulation, and agent-based models.

Course Outcomes
There are no course outcomes available

GEOG 211 : Map Use and Interpretation. (4:4:0)
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Maps as tools for spatial analysis of problems in physical and cultural geography.

Course Outcomes
- Identify each component of the â Big Threeâ when using or observing geographic technologies. The Big Three includes 1) Geographic Information Systems, 2) Global Positioning Systems, and 3) Remote Sensing.
- Complete all typical map scale calculations related to land distance and area including unit conversions.
- Give and take coordinate references in UTM and lat / long and convert between the two. select a datum and coordinate system appropriate for a given job-related task. Explain the logic of and give / take a reference in the PLSS
- Configure a GPS receiver properly to use both with and without a map. Lay-in and follow the course in a GPS receiver.

Measure elevation, distance, direction, slope, and aspect from digital or paper topographic maps. Perform a simple statistical analysis of data on a USGS topographic map.
- When presented with a typical specimen, perform a simple interpretation of a thematic map (e.g. Choropleth, Isoline)

GEOG 212 : Introduction to Geographic Information Systems. (3:2:1)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Concepts in the use of small- and large-scale digital map data, emphasizing landscape interpretation and feature description.

Course Outcomes
- Understand basic spatial concepts and data models that form the foundation of GIS.
- Acquire geospatial data from common sources and manipuate them for a specific application.
- Analyze data using GIS to solve real world problems.
- Describe several applications in which GIS is used to solve geographic problems.
- Design and use maps to explore and communicate geospatial information.

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

Course Outcomes
- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MMBIO 241 : Molecular and Cellular Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBio 240 or concurrent enrollment.

DESCRIPTION: Molecular and cellular biology techniques laboratory.

Course Outcomes
- Practice ethics and integrity by working with groups and following lab rules.*Relates to Program Learning Outcome: A commitment to professional integrity and ethical behavior consistent with themission of the university.
- Learn the basics of experimental design, how to formulate a hypothesis, what controls to use, how to interpret experimental data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Practice scientific communication through written lab questions, exams and oral presentations.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Learn molecular biology laboratory techniques through practical laboratory exercises. Techniques include, spectrophotometry,isolation of DNA and protein, quantification of DNA and protein, techniques used to purify or detect specific proteins, such aschromatography, western blot and ELISA, DNA fingerprinting, polymerase chain reaction and enzyme assays.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology.

PWS 551 : Quantitative Ecology. (3:2:3)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: Bio 350 or equivalent; Stat 121 or 511 or concurrent enrollment.

DESCRIPTION: Quantitative methods for ecological sampling and data analysis.

Course Outcomes
- Demonstrate application of the scientific and analytical methods in ecological research.
- Learn how and when to use appropriate sampling and a data analysis techniques for ecological inquiry.
- Demonstrate ability to synthesize literature relevant to a research project.
- Demonstrate oral and written scientific communications skills.

STAT 230 : Analysis of Variance. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

RECOMMENDED: Concurrent enrollment in MATH 112.

DESCRIPTION: Scientific method, statistical thinking, sources of variation, completely randomized design, ANOVA, power and sample size considerations, multiple testing, randomized complete blocks, factorial designs, interactions. Introduction to statistical software.

Course Outcomes
- Define the experimental unit, response variable, factor(s), and level(s) of a basic experiment
- Understand the role of randomization and replication in inferring causation
- Perform a completely randomized design and construct the ANOVA table in SAS and R
- Compute the minimum number of replicates in a completely randomized design to achieve a given level of power
- Compute pairwise tests of differences in means in SAS and R to understand a significant overall F-test

- Perform a randomized complete block design and construct the ANOVA table in SAS and R
- Perform a factorial design and construct the ANOVA table in SAS and R
- Explain a statistically significant interaction
- Describe the differences between a split plot and a two-way ANOVA

STAT 234 : Methods of Survey Sampling. (3:3:2)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

DESCRIPTION: Sampling frames; questionnaire design; simple random, systematic, stratified, and cluster sampling methods; comparing domain means; contingency table analysis.

Course Outcomes

- Identify and sample using simple random sampling and various forms of stratified sampling, cluster sampling, and systematic sampling
- Accurately identify and perform variance calculations for basic designs
- Participate in a real project involving sampling methodologies and appropriate point estimate and variance calculations
- Create graphical representations of results
- Demonstrate effective written and oral communication skills as they present their findings

4. Complete at least six hours from the following management and policy elective courses:

ECON 440 : Natural Resources and Environmental Economics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ECON 380 & ECON 388

RECOMMENDED: Econ 382.

DESCRIPTION: Economic theory applied to allocation of natural resources and environmental amenities. Issues relating to externalities, common property resources, public goods, allocation of depletable natural resources over time, economic factors of environmental polarization, and others.

Course Outcomes

- Utilize economic principles and models to address private and public policy issues related to allocating natural resources and environmental amenities.Demonstrate an active understanding of the following elements of economic theory as it relates to natural resource and environmental economics:Welfare economics and concepts of Pareto optimality, efficiency, and equityThe role of property, property rights, and the bundle of rights conceptThe role of externalities, common property resources, and public goodsConcepts and measures of economic value including non-market valuation.Demonstrate a basic knowledge of the role of markets and market failure with regards to the allocation of natural resources and environmental amenities.Gain a basic understanding of the effects and relative merits of public environmental policy efforts, including cap-and-trade schemes, Pigovian taxes, regulation, and public ownership and/or management.Become knowledgeable about and be able to use economic principles and non-market valuation techniques to address a variety of continuing and contemporary natural resource and environmental issues. These issues may include, but are not exclusive to:Population growth and the environmentGlobal warmingWilderness protection and related public lands issuesAir pollution and public healthIntergenerational allocation of soil, forest, and other depleteable natural resourcesImpacts of environmental features on property values.

GEOG 303 : Biogeography. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Geog 101.

DESCRIPTION: Broad-scale distribution of plants and animals. Theoretical and practical applications to conservation and effects of global environmental change.

Course Outcomes

- Demonstrate an understanding of basic concepts and processes in biogeography
- Recognize and be able to explain patterns of plant and animal life at many different scales
- Explain how humans have affected the distribution and diversity of plants and animals, and apply concepts to decisions regarding human use of the environment
- Demonstrate a knowledge of prominent professional biogeographers and ecologists and their current research themes
- Plan for future changes in species distributions and diversity as a result of environmental and human-induced pressures

GEOG 306 : Public Land Conservation. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Environmental and social geography of public lands; analyzing historical, planning, management, and ecological issues.

Course Outcomes

There are no course outcomes available

GEOG 307 : Landscape Ecology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Geog 101.

RECOMMENDED: Geog 212, 213.

DESCRIPTION: Interaction between spatial patterns and spatial processes in an ecological context. Methods, theories, and practical applications of landscapes at various scales.

Course Outcomes

- Demonstrate an understanding of the basic concepts of landscape ecology
- Understand the relation between pattern and process in landscapes across multiple spatial and temporal scales
- Read, understand, and critique research articles in scholarly journals related to landscape ecology
- Understand and be able to use landscape metrics and associated methodologies and technologies to quantitatively analyze landscapes
- Identify and address a research question in landscape ecology, and effectively communicate the results orally and in writing
- Apply landscape ecology concepts to environmental planning and conservation biology

GEOG 310 : Introduction to Urban and Regional Planning. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Introduction to the profession and practice of urban and regional planning.

Course Outcomes

There are no course outcomes available

HIST 290 : Nature and History: The Earth's Environmental Past. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Human historical interactions with animals, plants, and landscapes. Global histories of climate, population, whaling, fossil fuels, the car, animal rights, suburban sprawl, eco-theology, environmentalism, ecotourism, etc.

Course Outcomes

- Students will become academically conversant with the major historical developments in our global relationship with nature.
- Students will be able to analyze and evaluate the content and meaning of primary sources, and through critical interpretation, draw reasonable conclusions.
- Students will be able to formulate historical questions and answer them by careful and systematic research in primary and secondary sources.
- Students will be able to write history that is coherent and persuasive by following discipline's norms for writing and careful documentation.

PWS 411 : Watershed Management. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: BIO 350; or PWS 350

DESCRIPTION: Processes and management of the hydrologic cycle of forests and rangelands.

Course Outcomes

- Students will understand the history and policy that drives water management in the western US.
- Students will understand ecological and hydrological processes and concepts and apply them to watershed management actions such as harvesting, grazing, and restoration.
- Students will be able to apply assessment and classification tools to watersheds and their components to determine how management actions affect hydrologic responses.

PWS 419 : Forest Management and Ecology. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Managing forests, emphasizing ecosystem managment.

NOTE: Field trips required.

Course Outcomes

- 1. Articulate their role as stewards over forested environments.
- 2. Appreciate the diversity of forests world-wide and their importance to human populations.
- 3. Apply knowledge of forest structure, function, and process in making management decisions
- 4. Be able to quantify forest structure and production
- 5. Recognize forest pests and diseases and know appropriate control techniques.
- 6. Relate forests to wildlife habitat
- 7. Identify 75 tree species located in Utah and on BYU campus.

5. Complete at least five hours from the following biology electives:

BIO 352 : Introduction to Marine Biology. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: BIO 220A

DESCRIPTION: Marine life, the sea as an environment, and research methods.

Course Outcomes

There are no course outcomes available

BIO 380 : Comparative Animal Physiology and Anatomy. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 220A or instructor's consent.

DESCRIPTION: Structure and function of animal organ systems; structural and physiological responses to demands of and changes in environment; evolutionary constraints on anatomy and physiology.

Course Outcomes

- Students will demonstrate a fundamental knowledge of comparative vertebrate animal physiology and anatomy.

- Students will develop critical thinking skills while learning concepts and understanding the tools used by comparative vertebrate animal physiologists and anatomists to study function and structure.
- Students will use physiological and anatomical knowledge to enhance their personal lives.
- Students will use their skills and knowledge in comparative vertebrate animal physiology and anatomy to secure employment or to advance in higher education in biology-related disciplines.
- Students will develop an understanding of physiologic isotopic techniques utilized to indicate energy sources, trophic levels, body water, and latitudinal and altitudinal animal migration reflected by stable isotopes of carbon, nitrogen, hydrogen and oxygen.

BIO 430 : Plant Classification and Identification. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 100 or Bio 130 or PDBio 120 or PWS 100 or instructor's consent.

DESCRIPTION: Principles of plant systematics, taxonomy, and classification, emphasizing family recognition by sight, terminology, and use of identification keys to the temperate flora.

Course Outcomes

- Students will apply correct vocabulary for describing plant parts and be able to deduce the meaning of new terms based on knowledge of common roots, prefixes, and suffixes.
- Students will recognize the major groups of vascular plants, be able to differentiate them by their principal characters, and understand their phylogenetic relationships.
- Students will identify by sight 40 families of flower plants as well as common families of ferns and gymnosperms, by recognizing differentiating features of each family.
- Students will gain proficiency in the use of keys and identification manuals for identifying any unknown plant to species.

BIO 441 : Entomology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 220A or equivalent.

DESCRIPTION: External morphology, natural history, evolution, distribution, and phylogeny of insects. Insect collection required.

Course Outcomes

- Understand basic principles of morphology and systematics and apply these principles to your own knowledge of insects.
- Judge genetic relationships. Be able to recall current hypotheses of insect phylogeny at the ordinal level and have the tools needed to judge validity of new hypotheses of phylogeny that might be proposed. You will also study carefully the modifications associated with phylogenies that led to insect diversification and success.
- Understand details of insect morphology, and be well versed in both internal and external body structures.
- Recognize common insect families and be able to quickly identify them on sight.
- Gain or regain a sense of wonder for the natural world, especially as it relates to insects and other arthropods. Gain perspectives of the diversity and complexity in the insect world. Enhance your appreciation for the natural world we share with them.
- Learn life histories and specific collecting techniques for insects in their own habitats. You will learn how they fit in the natural world.
- Learn the protocols for detailed identificiations. Many insects will be totally new in appearance to you. You will use identification guides and illustrations to help you decide what the name of an insect is at the Order and Family levels.
- Use a variety of identification techniques to correctly identify insects and other arthropods. Throughout your life you will be asked by employers, friends, and family to answer the question, "What is this?" This course will give you these exact skills. A correct identification is a beginning step to learning more about a species and its relationships to the natural world and its pragmatic relationship to humans.

BIO 442 : Advanced Invertebrate Zoology. (5:6:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: BIO 220A

DESCRIPTION: Functional morphology, cladistics, ecology, behavior, and interrelationships of invertebrates.

Course Outcomes

There are no course outcomes available

BIO 443 : Ichthyology. (3:2:3)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: BIO 220A

DESCRIPTION: Fish systematics, evolution, morphology, distribution, and natural history.

Course Outcomes

- Students will have a general understanding of fish respiration.
- Students will have a general understanding of fish body structure.
- Students will have a general understanding of fish food processing.
- Students will have a general understanding of fish behavior and communication.

BIO 445 : Herpetology. (4:3:2)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: BIO 220A

DESCRIPTION: Reptile and amphibian evolution, systematics, morphology, distribution, and natural history. Lab emphasizes taxonomy, classification, and distribution of western U.S. species.

Course Outcomes

- Each student will gain a deeper understanding of some details of the origin of tetrapods, and the origin of the amniotes.
- Each student will gain a deeper understanding of the phylogenetic position of extinct and extant clades of amphibians & reptiles within the clade Vertebrate.
- Each student will acquire a detailed knowledge of the evolution and natural history (natural history, behavior, etc.) of the major clades of extant amphibians and reptiles .
- Through lab and field experiences, each student will acquire a detailed knowledge of diagnostic characters, taxonomy & distributions, and some aspects of ecology of native western species.
- Each student will acquire some knowledge of the conservation status of selected species in the US and abroad.

BIO 446 : (Bio - PWS) Ornithology. (3:2:3)

WHEN TAUGHT: Winter
PREREQUISITE: Bio 100 or Bio 130 or PDBio 120 or PWS 100 or equivalent or instructor's consent.
DESCRIPTION: Avian systematics, evolution, distribution, identification, and natural history.
NOTE: One three-day field trip required.

Course Outcomes

- Define ornithology and what it encompasses.
- Discuss the global diversity of birds in both form and function
- Articulate the current thinking regarding the evolution of birds.
- Identify 200 birds common to western North America.

BIO 447 : Mammalogy. (3:2:3)

WHEN TAUGHT: Fall
PREREQUISITE: BIO 220A; or PWS 344
DESCRIPTION: Mammalian diversity, evolution, distribution, and natural history. Two three-day field trips required.

Course Outcomes

- Be able to recognize the more common species of Utah mammals based on external and skull features
- Be able to recognize and identify most orders of mammals based on features of the skull
- Understand the evolutionary history of mammals and the modern diversity of mammalian orders
- Enhance skills directed toward understanding and interpreting original scientific literature dealing with mammalian biology

BIO 452 : Introduction to Marine Sciences. (4:3:1)

WHEN TAUGHT: Contact Department. ; Spring Even Yrs.
PREREQUISITE: Instructor's consent.
DESCRIPTION: Principles of physical oceanography, biodiversity, and ecology of numerous ocean habitats. Extensive field trips.

Course Outcomes
There are no course outcomes available

BIO 453 : Development of Marine Animals. (3:0:6)

WHEN TAUGHT: Contact Department.
PREREQUISITE: BIO 352; Instructor's consent.
DESCRIPTION: Culturing, studying, and reporting on the development of eggs, embryos, and larvae of marine animals.

Course Outcomes
There are no course outcomes available

BIO 494R : Mentored Research. (1-6:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Supervisor's consent.
DESCRIPTION: Independent student research under faculty supervision.

Course Outcomes

- Students will demonstrate an understanding of the methods of scientific inquiry.
- Students will demonstrate an ability to design and implement a research project in a specialized area.
- Students will effectively interpret, analyze, and present results of experimentation to others.
- Students will show an appreciation for and understanding of the specialized field.

: Aquatic Biology.

Course Outcomes

: Bioinformatics.

Course Outcomes

: Ecology.

Course Outcomes

: Electron Microscopy.

Course Outcomes

: Entomology.

Course Outcomes

: Evolution.

Course Outcomes

: Marine Biology.

Course Outcomes

: Plant Biology.

Course Outcomes

: Systematics.

Course Outcomes

: Veterinary Science.

Course Outcomes

: Medicinal Botany.

Course Outcomes

: Plant Biochemistry.

Course Outcomes

: Fungal Biology.

Course Outcomes

Or

LFSCI 494R : Mentored Research. (1-6:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

Course Outcomes

- 1. Demonstrate critical or analytical thinking skills by analyzing and interpreting experimental data.2. Exhibit proficient writing skills by producing a portfolio, research paper, scientific journal article, and/or scientific poster.3. Critically read scientific literature and evaluate the ability of an argument or evidence to support a conclusion.4. Function as a collaborative team member by participating in student mentored learning groups or research groups.

(3 hours maximum)

BIO 510 : Biological Systematics and Curation. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Principles, methods, and tools of taxonomy and systematics as applied to species delimitation, specimen-based research, nomenclatural codes, and the curation of biological specimens.

Course Outcomes

- Students will be able to discuss species as the fundamental unit of biodiversity and the difference between species definitions and criteria used to delimit species.
- Students will be able to discuss basic philosophies of classification and the relationship between classification, phylogeny, and nomenclature.
- Students will gain proficiency with nomenclatural codes and their relationship to specimen-based research products such new species descriptions, monographs, floras, and faunas.
- Students will gain experience with a variety of specimen-based research tools.
- Students will understand responsibilities of biological collections management and curation.

BIO 511 : Lichenology. (3:2:3)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Classification, morphology, and ecology on lichens. Field trip required.

Course Outcomes

- Research and characterize the nature of the lichen symbiosis.
- Develop a working knowledge of lichen biology.
- Demonstrate an understanding of the role of lichens as biomonitors of air quality.
- Develop basic skills for collecting, processing, and identifying lichens.
- Develop basic skills with:- Thin-layer chromatography – lichen secondary chemistry.- Molecular techniques – to characterize genetic patterns and relationships at the population level.
- Prepare research manuscripts for review and publication consideration.
- Present a research proposal for a project using lichens as air quality biomonitors.

BIO 512 : Angiosperm Phylogeny. (3:2:4)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Bio 430 or equivalent.

DESCRIPTION: Description, classification, phylogeny, and geographic distribution of flowering plant families.

Course Outcomes

- Students will be able to discuss the primary pattern of relationships among flowering plants as supported by contemporary research.â ¨â ¨
- Students will demonstrate proficiency in tree-thinking and the application of phylogenetic terminology in discussing angiosperm relationships.
- Students will demonstrate knowledge of world-wide flowering plant diversity, including examples of model organisms, convergence, and evolutionary novelties.
- Students will be able to discuss contemporary research in flowering plant diversity, including outstanding problems where additional research is needed.

BIO 541 : Aquatic Entomology. (4:2:4)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: Bio 441 or equivalent.

DESCRIPTION: Morphology, classification, biology, and functional ecology of aquatic insects. Field trips required.

Course Outcomes

- Develop an appreciation for the diversity of the living aquatic insect world.
- Learn to become better stewards of the earth and its living inhabitants.
- Understanding of all aquatic biology.

BIO 556 : Limnology. (3:2:4)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Bio 350, Chem 106; or equivalents.

DESCRIPTION: Lakes, reservoirs; their biota and physical/chemical properties.

Course Outcomes

- Understand the major physical processes that form and characterize lentic habitats.
- Understand the dominant chemical processes that occur in lake systems.
- Understand how organisms adapt to the above physical and chemical constraints.
- Gain teaching experience through preparing a Powerpoint presenting your study presentation to the class.
- Experience pursuing a focused research topic from the initial question to a competed report.

BIO 557 : Stream and Wetland Ecology. (4:3:4)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Bio 350, Chem 106; or equivalent.

DESCRIPTION: Stream and wetland ecology; their biota and their physical/chemical properties.

Course Outcomes

- Develop an understanding of streams and wetlands within the broader context of ecology and conservation.
- Become familiar with the major conservation issue in streams and wetlands and the underlying ecological concepts.
- Initial exposure to the current literature.
- Develop skills related to critical thinking. That is, learn how to: a) read critically and summarize information, b) draw conclusions and synthesize information to develop new questions and hypotheses, and c) design experiments or comparative studies. It is important to start early to learn how to think, read, and write critically.

BIO 559R : Advanced Topics in Ecology and Evolution. (1-6:ARR:ARR)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Instructor's consent.

DESCRIPTION: Current topics in ecology, evolution, and systematics.

Course Outcomes

- Students will demonstrate an understanding of the methods of scientific inquiry.
- Students will demonstrate an ability to design and implement a research project in ecology and evolution.
- Students will effectively interpret, analyze, and present results of experimentation to others.
- Students will show an appreciation for and understanding of ecology and evolution.

: Advanced Ecology.

Course Outcomes

: Advanced Systematics.

Course Outcomes

: Evolutionary Biology.

Course Outcomes

: Biogeography.

Course Outcomes

: Physiological Ecology.

Course Outcomes

: Tropical Biology.

Course Outcomes

: Biological Science Education.

Course Outcomes

: Field Biology.

Course Outcomes

BIO 560 : Population Genetics. (4:4:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Bio 420 or equivalent.

DESCRIPTION: Basic principles of population genetics applied to natural populations; drift, selection, and nonrandom mating; inferring population subdivision, migration, and gene flow.

Course Outcomes

- Students will gain a general introduction to the field a population genetics.
- Students will experience the broad application of population genetics to diverse fields from ecology to medicine.
- Students will manipulate and analyze population genetic data, especially molecular data.

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes

- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

PWS 282 : Introduction to Soil Science. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 283 or concurrent enrollment.

DESCRIPTION: Physical, chemical and microbiological properties of soils that affect plant growth in natural, agricultural, and urban environments.

Course Outcomes

- Enhance critically thinking skills as they apply to soil resource management and conservation
- Demonstrate a fundamental knowledge of soil chemistry, genesis, microbiology, physics, taxonomy, and nutrient and water relations
- Create a conceptual framework to help manage soil resources (i.e., animal habitat, plant nutrient fertility, salinity, soil and water quality, and wind and water erosion) in agricultural, urban, and ecological settings
- Understand the historical and current problems, and cultural concerns facing soils as a natural resource essential to human life

PWS 440 : Plant Physiology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: GE Biological Science requirement; college chemistry

RECOMMENDED: Chem 285; or 351, 352.

DESCRIPTION: Photosynthesis, respiration, water relations, mineral nutrition, growth of flowering plants.

Course Outcomes

- Students will be fluent in understanding plant function at the molecular, biochemical and whole plant levels
- Students will understand the connections between plant function and ecosystem processes
- Student will practice applying the scientific method in order to develop critical thinking and problem solving skills
- Student will engage in learning activities that increase there writing and speaking proficiency

6. Complete an exit interview.

*Hours include courses that may fulfill university core requirements.

Undergraduate Courses

100-Level Courses

BIO 100 : Principles of Biology. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Introductory course for general education students.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
There are no course outcomes available

BIO 130 : Biology. (4:3:1)

WHEN TAUGHT: Fall; Winter
DESCRIPTION: General biology course with laboratory for biology majors. Introduction to disciplines in the life sciences including methods for scientific inquiry, biochemical dynamics, cell structure and function, evolutionary theory, bioenergetics, and ecological interactions.

Course Outcomes

- Students will demonstrate basic literacy in the language of science and an understanding of the foundational theories of biology (i.e., be able to formulate appropriate hypotheses and predictions to test specific biological phenomena and use appropriate vocabulary to do so) o Atomic Molecular Theoryo Cell Theoryo Theories of Photosynthesis, Fermentation, and Cellular Respirationo Cell Division and Meiotic Theorieso Chromosomal and Mendelian Theories of Inheritanceo Watson and Crick's Theory of DNA Structure and Replicationo Protein Synthesis Theoryo Darwin's Theory of Natural Selectiono Hardy-Weinberg Theoryo Ecosystem Theoryo Population Growth Theoryo Competitive Exclusion and Behavioral Theory
- Students will demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strengths and weaknesses of this process.
- Students willappreciate the excitement of discovery that has accompanied important scientific developments.
- Students will demonstrate how scientific methodology can be used to analyze real-world science-related problems.
- Students will be able to evaluate scientific data and claims in order to make rational decisions on public-policy science issues that affect their community.
- Students will be able to express their thoughts (in oral, graphical, and written formats) on scientific topics clearly, including appropriate use of basic scientific vocabulary and effective interpretation of quantitative data.
- Students will be able to reflect rationally upon the interface between science and religion.
- Students will demonstrate sound scientific reasoning ability.

BIO 165 : Introduction to Bioinformatics. (3:3:0)

WHEN TAUGHT: Winter
DESCRIPTION: Introduction to basic concepts in bioinformatics. Standard bioinformatic applications.

Course Outcomes
There are no course outcomes available

BIO 175 : Principles of Biology Laboratory. (1:0:2)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Elementary education or early childhood education pre-major or major status; concurrent enrollment in Bio 100.

Course Outcomes
There are no course outcomes available

200-Level Courses

BIO 220A : Biological Diversity: Animals. (4:3:3)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Comparative organization and evolutionary significance of morphological, physiological, reproductive, and ecological differences in invertebrates and vertebrates. Laboratory included.

Course Outcomes
- Students will be able to discuss the broad patterns of the evolution of the clade Animalia, emphasizing the relationships among major sub-clades (phyla), the unique biological attributes that define these clades, and the novel changes in morphology over major transitions (unicellular to multicellular; acoelomate to pseudocoelomate to coelomate body plans, bilaterial vs radial symmetry, origins of exoskeletons, gill slits, notochord, crania & vertebral columns, etc.).
- Students will develop the skills necessary to understand the terminology of phylogenetic systematics and methods used to recover the “tree of life”, the logic behind the hierarchy (i.e., the only possible outcome of the process of “descent with modification”), and critically apply evolutionary reasoning, including the use of phylogeny and tree-thinking, to formulate and test hypotheses that explain biological diversity.
- Students will have the intellectual tools to continue to explore related topics with confidence and understanding throughout their lives, and a deeper appreciation for the diversity of life on earth.

BIO 220B : Biological Diversity: Plants. (4:3:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Comparative organization and evolutionary significance of morphological, physiological, reproductive, and ecological differences in fungi, algae, and principal groups of land plants. Laboratory included.

Course Outcomes
- Students will be able to discuss differences between cyanobacteria, algae, bryophytes, non-seed vascular plants, gymnosperms, flowering plants, and fungi with repsect to their lifecycles, characteristic morphologies, and biological roles.
- Students will develop the skills necessary to understand and critically apply evolutionary logic including the use of phylogeny and tree-thinking to formulate and test hypotheses that explain biological diversity
- Students will be able to continue to explore related topics with confidence and understanding throughout their lives.

BIO 235 : Field Botany. (3:3:6)

WHEN TAUGHT: Fall; Spring

DESCRIPTION: Recognition, characteristics, and uses of common trees and shrubs.

Course Outcomes
- Students will demonstrate a fundamental knowledge of biology
- Students will develop the discovery skills and tools used by biologists
- Students will use biological knowledge to enhance their personal lives
- Students will use their skills and knowledge in biology to secure employment or to advance in higher education in biology-related disciplines

BIO 270 : Animal Restraint. (1:0:2)

WHEN TAUGHT: Winter

DESCRIPTION: Restraint and first aid techniques for pet, laboratory, domestic, and wild animals.

Course Outcomes
- Know how to safely restrain domestic animals and wildlife species
- Understand basic animal restraint techniques for a number of domestic and wildlife species
- Understand why certain restraint techniques work with only certain animals and not others
- Develop a basic knowledge of animal chemical restraint methods and their indications
- Understand why the use of pharmaceutical agents by lay persons is not advocated without a veterinarian's prescription or special knowledge and training of non-veterinarian personnel, such as wildlife biologists

BIO 276 : Exploration of Teaching in Biological Sciences. (3:ARR:ARR)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 220A & BIO 220B & CHEM 105; major GPA of 2.85 or higher, FBI fingerprint and background clearance; previous application required.

DESCRIPTION: Field-based initial teaching experience directed at helping prospective teachers experience demands and opportunities associated with teaching secondary students.

Course Outcomes
There are no course outcomes available

BIO 291R : Veterinary Medicine Seminar. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: Preview into veterinary medicine as a profession. Application procedure and preparation for veterinary school.

Course Outcomes
- Develop a working knowledge of the educational requirements and preveterinary medicine prerequisite coursework required by the majority of USA colleges of veterinary medicine (CVM)
- Learn how to navigate the application process for admission to colleges of veterinary medicine, understand the different sections of the online veterinary medicine college application service (VMCAS) form, and know what information is needed for supplemental application forms required by individual CVMs
- Knowledge of state contracts, the Western Interstate Commission for Higher Education (WICHE) Professional Student Exchange Program (PSEP), state residency requirements
- Understand the cost of a veterinary medicine education, and learn how to minimize educational debt with scholarships, grants, research stipends, and military or government programs
- Career alternatives, general or specialty practices in veterinary medicine
- Understand the issues concerning animal welfare, animal research, and responsibilities as a member of the

veterinary profession
- Statistics with data on need (based on demographic or other data), employment placement, salary, employer requirements, market research information, and advanced degrees to enhance employment opportunities in veterinary medicine

300-Level Courses

BIO 347 : Religion and the Environment. (3:3:3)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Introductory biology or instructor's consent.

DESCRIPTION: The role religion has played historically in defining how humans relate to nature and its creatures. How religion frames environmental values and ethics today, emphasizing LDS viewpoints.

Course Outcomes
- develop skill in writing about nature, religion, and the environment
- gain familiarity with the relationship between religion and environmental through reading primary literature
- come to appreciate approaches to faithful responses to caring for the Earth and its processes.

BIO 350 : Ecology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Distribution and abundance of organisms and their interactions with the physical and biotic components of the earth.

Course Outcomes
- Understand the major physical processes that form and characterize the biosphere, including global scale energy flow, the carbon cycle, climate, and soil formation.
- Understand the processes that drive major levels of organization of the biotic world, including energetics in the ecosystem, population dynamics, and species interactions.
- Understand the importance of writing as a way of synthesizing and solidifying critical thought.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Understand the importance of ecology to issues regarding human well-being
- See the connectivity and relevance of ecology to other fields of study

BIO 352 : Introduction to Marine Biology. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: BIO 220A

DESCRIPTION: Marine life, the sea as an environment, and research methods.

Course Outcomes
There are no course outcomes available

BIO 365 : Computational Biology. (3:2:1)

WHEN TAUGHT: Fall

PREREQUISITE: C S 240

DESCRIPTION: Computational analysis of DNA data; introduction to bioinformatics databasing using Perl and SQL; configuration of UNIX workstations for bioinformatics analyses.

Course Outcomes
- To provide practical experience in using computational approaches to address biological problems.
- Describe general areas of computational problems in biology (alignment, estimation, tree searches, molecular modeling, gene prediction) and learn about existing computational approaches to these general problems.
- Learn basic computational tools for statistical inference (Bayesian, Maximum likelihood, Markov Chain Monte Carlo, Hidden Markov Chain)
- Apply programming skills to alignment problems through the development of novel tools and software for alignment
- Apply programming skills to tree searching problems through the development of novel tools software
- Apply programming tools to gene prediction problems through the development of novel tools and software
- Develop ability to use existing and write new database code to access and manipulate genetic data

BIO 370 : Bioethics. (2:1:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Introductory biology course.

DESCRIPTION: In-depth lecture and small group discussion of varied bioethical issues. LDS Church positions emphasized when appropriate.

Course Outcomes
- Students will understand the ethical and philosophical underpinnings of bioethics and to develop ethical intuitions on bioethical issues.
- Students will learn the terminology, vocabulary, and objectives of bioethics.
- Students will understand the tools and approaches needed to make a bioethical decision and to communicate that decision in rationally informed ways.
- Students will understand the bioethical primary literature, to understand how to read case studies, and familiarity with the major issues being discussed in bioethics today.

BIO 377 : Teaching Methods and Instruction in Biology. (3:ARR:ARR)

WHEN Fall

TAUGHT:

PREREQUISITE: BIO 276; concurrent enrollment in Bio 378, 379, Sc Ed 380; major GPA of 2.85 or higher.

DESCRIPTION: Developing meaningful and engaging instruction for secondary students in biological sciences; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

Course Outcomes

- Students will demonstrate an understanding of key learning theories by explaining how students learn.
- Students will demonstrate proper pedagogical practices in a biological teaching setting.
- Students will develop effective unit and lesson plans to promote science learning.

BIO 378 : Practicum in Biology Teaching. (1:0:3)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Bio 377, 379, Sc Ed 380.

DESCRIPTION: Implementing meaningful and engaging instruction for secondary students in biology; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

Course Outcomes

- Students will be able to identify best practices in teaching.
- Students will show active involvement with mentor teacher in creating and teaching lessons, grading papers, or any other classroom work.
- Students will be able to identify practices that they can incorporate into their own teaching.

BIO 379 : Classroom Management and Laboratory Safety. (1:1:0)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Bio 377, 378, Sc Ed 380.

DESCRIPTION: Current theory, research, and application in classroom management; creating positive teacher-student and peer relationships; developing optimal learning environments.

Course Outcomes

- Students will integrate current theory, research, and application in classroom management to create an optimal learning environment.
- Students will demonstrate appropriate and effective classroom management strategies.
- Students will demonstrate an understanding of proper laboratory safety protocols.

BIO 380 : Comparative Animal Physiology and Anatomy. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 220A or instructor's consent.

DESCRIPTION: Structure and function of animal organ systems; structural and physiological responses to demands of and changes in environment; evolutionary constraints on anatomy and physiology.

Course Outcomes

- Students will demonstrate a fundamental knowledge of comparative vertebrate animal physiology and anatomy.
- Students will develop critical thinking skills while learning concepts and understanding the tools used by comparative vertebrate animal physiologists and anatomists to study function and structure.
- Students will use physiological and anatomical knowledge to enhance their personal lives.
- Students will use their skills and knowledge in comparative vertebrate animal physiology and anatomy to secure employment or to advance in higher education in biology-related disciplines.
- Students will develop an understanding of physiologic isotopic techniques utilized to indicate energy sources, trophic levels, body water, and latitudinal and altitudinal animal migration reflected by stable isotopes of carbon, nitrogen, hydrogen and oxygen.

BIO 392R : Preveterinary Preceptorship. (3:1:5)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Supervised on-the-job exposure to veterinary medicine under a clinical setting, supplemented with academic assignments.

Course Outcomes

- I. Skills student should master during the preveterinary medicine preceptorship experience:Husbandry: feeding, sanitation, handling, breed recognitionRestraint of animals for examination, treatment and radiographyLogging medical data and recording information in patient chartsGrooming for medical reasonsObserve and recognize normal and abnormal body functions and vital signsConcepts of animal welfare and humane treatment of animalsIntroduce methods and explain necessity of animal population controlObtain knowledge of and competency with routine preventive medicine including vaccination protocols, parasite identification-treatment-prevention, routine physical examination, geriatric health care
- II. The student should observe and participate in these activities:Client-doctor relations and dialogue; demonstration of veterinary ethics and integrity; diagnostic thought process and rationalePatent examination; administration of medication and therapy; collection of body fluids and specimensMedical record information entryClinical diagnostic laboratory techniquesDeveloping and interpreting radiographsSurgical suite protocols:preparation of instrument packs, drapes, surgical gownsaseptic techniqueanesthesia administration and monitoringsurgical preparation of patientsurgery protocols and surgical assistanceintensive and post-operative nursing careEuthanasia
- III. Areas of hospital student should receive exposure to:Kennel and quarantine wardsTreatment areasSurgery and examination roomsOffice proceduresTelephone etiquetteLaboratory and pharmacyLibrary search and literature review of clinical case information and current treatments based on veterinary research

400-Level Courses

BIO 420 : Evolutionary Biology. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PWS 340

RECOMMENDED: Concurrent enrollment in Bio 421.

DESCRIPTION: Intensive examination of evolution as the conceptual cornerstone of biology.

Course Outcomes

- Students will be able to describe the history and development of evolutionary thought.
- Students will be able to list and describe the evidence for evolution and its required corollaries.
- Students will be able to describe the mechanisms by which evolution occurs. Provide detailed explanations of the the processes of evolution by mutation, migration, genetic drift, non-random mating, and natural selection.
- Students will be able to explain adaptation, providing examples from several different fields of biology (e.g., cell biology, physiology, conservation biology, bioinformatics, medicine, behavior, etc.).
- Students will be able to describe the history of life on earth. Identify major evolutionary transitions over time, and explain the tools and evidence that support current hypotheses of the history of life.

BIO 421 : Evolutionary Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240

DESCRIPTION: Hands-on applications and analytical tools of evolutionary biology; emphasizing inference methodology and evidence complementing the theoretical constructs introduced in Bio 520, including comparative anatomy, phylogenetic inference, population genetics, species concepts, and human evolution.

NOTE: Concurrent enrollment with Bio 420 is strongly recommended.

Course Outcomes

- Students will gain a better understanding of the basic principles of evolution within a population including selection, drift, and founder effects by using computer simulations.
- Students will have a deeper understanding of the LDS position on evolution.
- Students will learn the details of phylogenetic reconstruction, tree searching, DNA sequence alignment, and other bioinformatics tools for deciphering patterns of evolution.
- Students will learn the details of species concepts and the criteria used for identifying and diagnosing species.
- Students will gain hands-on experience with hominid fossils and gain an understanding of the evidence that elucidates the biological history of humans.

BIO 430 : Plant Classification and Identification. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 100 or Bio 130 or PDBio 120 or PWS 100 or instructor's consent.

DESCRIPTION: Principles of plant systematics, taxonomy, and classification, emphasizing family recognition by sight, terminology, and use of identification keys to the temperate flora.

Course Outcomes

- Students will apply correct vocabulary for describing plant parts and be able to deduce the meaning of new terms based on knowledge of common roots, prefixes, and suffixes.
- Students will recognize the major groups of vascular plants, be able to differentiate them by their principal characters, and understand their phylogenetic relationships.
- Students will identify by sight 40 families of flower plants as well as common families of ferns and gymnosperms, by recognizing differentiating features of each family.
- Students will gain proficiency in the use of keys and identification manuals for identifying any unknown plant to species.

BIO 441 : Entomology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 220A or equivalent.

DESCRIPTION: External morphology, natural history, evolution, distribution, and phylogeny of insects. Insect collection required.

Course Outcomes

- Understand basic principles of morphology and systematics and apply these principles to your own knowledge of insects.
- Judge genetic relationships. Be able to recall current hypotheses of insect phylogeny at the ordinal level and have the tools needed to judge validity of new hypotheses of phylogeny that might be proposed. You will also study carefully the modifications associated with phylogenies that led to insect diversification and success.
- Understand details of insect morphology, and be well versed in both internal and external body structures.
- Recognize common insect families and be able to quickly identify them on sight.
- Gain or regain a sense of wonder for the natural world, especially as it relates to insects and other arthropods. Gain perspectives of the diversity and complexity in the insect world. Enhance your appreciation for the natural world we share with them.
- Learn life histories and specific collecting techniques for insects in their own habitats. You will learn how they fit in the natural world.
- Learn the protocols for detailed identificiations. Many insects will be totally new in appearance to you. You will use identification guides and illustrations to help you decide what the name of an insect is at the Order and Family levels.
- Use a variety of identification techniques to correctly identify insects and other arthropods. Throughout your life you will be asked by employers, friends, and family to answer the question, "What is this?" This course will give you these exact skills. A correct identification is a beginning step to learning more about a species and its relationships to the natural world and its pragmatic relationship to humans.

BIO 442 : Advanced Invertebrate Zoology. (5:6:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: BIO 220A

DESCRIPTION: Functional morphology, cladistics, ecology, behavior, and interrelationships of invertebrates.

Course Outcomes
There are no course outcomes available

BIO 443 : Ichthyology. (3:2:3)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: BIO 220A

DESCRIPTION: Fish systematics, evolution, morphology, distribution, and natural history.

Course Outcomes
- Students will have a general understanding of fish respiration.
- Students will have a general understanding of fish body structure.
- Students will have a general understanding of fish food processing.
- Students will have a general understanding of fish behavior and communication.

BIO 445 : Herpetology. (4:3:2)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: BIO 220A

DESCRIPTION: Reptile and amphibian evolution, systematics, morphology, distribution, and natural history. Lab emphasizes taxonomy, classification, and distribution of western U.S. species.

Course Outcomes
- Each student will gain a deeper understanding of some details of the origin of tetrapods, and the origin of the amniotes.
- Each student will gain a deeper understanding of the phylogenetic position of extinct and extant clades of amphibians & reptiles within the clade Vertebrate.
- Each student will acquire a detailed knowledge of the evolution and natural history (natural history, behavior, etc.) of the major clades of extant amphibians and reptiles .
- Through lab and field experiences, each student will acquire a detailed knowledge of diagnostic characters, taxonomy & distributions, and some aspects of ecology of native western species.
- Each student will acquire some knowledge of the conservation status of selected species in the US and abroad.

BIO 446 : (Bio - PWS) Ornithology. (3:2:3)

WHEN TAUGHT: Winter

PREREQUISITE: Bio 100 or Bio 130 or PDBio 120 or PWS 100 or equivalent or instructor's consent.

DESCRIPTION: Avian systematics, evolution, distribution, identification, and natural history.

NOTE: One three-day field trip required.

Course Outcomes
- Define ornithology and what it encompasses.
- Discuss the global diversity of birds in both form and function
- Articulate the current thinking regarding the evolution of birds.
- Identify 200 birds common to western North America.

BIO 447 : Mammalogy. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 220A; or PWS 344

DESCRIPTION: Mammalian diversity, evolution, distribution, and natural history. Two three-day field trips required.

Course Outcomes
- Be able to recognize the more common species of Utah mammals based on external and skull features
- Be able to recognize and identify most orders of mammals based on features of the skull
- Understand the evolutionary history of mammals and the modern diversity of mammalian orders
- Enhance skills directed toward understanding and interpreting original scientific literature dealing with mammalian biology

BIO 450 : Conservation Biology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 220A & BIO 350; or BIO 220B & BIO 350

DESCRIPTION: Scientific principles of conservation: applying population genetics, and phylogenetic and ecological theory to preservation of biological diversity; developing sustainable ecological systems compatible with human resource use.

Course Outcomes
- Apply an understanding of ecological processes to conservation of populations, species, and ecosystems.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Demonstrate the ability to apply the scientific method and analytical thinking to ecological and conservation issues.
- Demonstrate the ability to synthesize literature relevant to a topic in conservation bioloigy
- Demonstrate the ability to write a scientific term paper

BIO 452 : Introduction to Marine Sciences. (4:3:1)

WHEN TAUGHT: Contact Department. ; Spring Even Yrs.

PREREQUISITE: Instructor's consent.

DESCRIPTION: Principles of physical oceanography, biodiversity, and ecology of numerous ocean habitats. Extensive field trips.

Course Outcomes
There are no course outcomes available

BIO 453 : Development of Marine Animals. (3:0:6)

WHEN TAUGHT: Contact Department.

PREREQUISITE: BIO 352; Instructor's consent.

DESCRIPTION: Culturing, studying, and reporting on the development of eggs, embryos, and larvae of marine animals.

Course Outcomes
There are no course outcomes available

BIO 455 : Plant Ecology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: BIO 220B

RECOMMENDED: Bio 350.

DESCRIPTION: Fundamental principles governing interactions among plants and their environments with respect to their success. Students will be able to apply their knowledge to land management, conservation and agriculture.

Course Outcomes
There are no course outcomes available

BIO 463 : Genetics of Human Disease. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 340

DESCRIPTION: Examining the application of genetics to understanding and treatment of human disease. Functional consequences of mutations; use of model organisms; linkage and association analysis of complex traits; pharmacogenetics; ethical considerations.

Course Outcomes
- Understand and explain the different types of genetic variants, how they can be typed and how they can be used to understand the genetic architecture of human disease.
- Understand linkage disequilibrium in the human genome and the role it plays in the search for genetic risk factors for human disease
- Understand and use basic statistics and software for analyzing the correlation between genetic markers and risk for disease.
- Understand and explain how model organisms contribute to our understanding of the genetics of human disease.
- Demonstrate the ability to obtain, aggregate and present information about the current knowledge of the genetics of a human disease.

BIO 465 : Bioinformatics and Proteomics. (3:2:1)

WHEN TAUGHT: Winter

PREREQUISITE: BIO 365

DESCRIPTION: 3-D protein structural comparisons, hidden Markov models for database comparisons, homology detection, multiple sequence analyses, and protein family comparisons. Exercises in computer programming in genomics.

Course Outcomes
- Students will learn and demonstrate mastery of advanced analytical bioinformatics techniques, including genome assembly, genome annotation, and protein analyses.
- Demonstrate ability to use and evaluate literature databases and primary literature directed to the bioinformatics community in terms of newly developed software, analytical algorithms, application to empirical data, etc.
- Apply and develop computational skills in secondary (i.e., helices, etc.) and tertiary (i.e., folding, etc.) prediction, and 3-dimensional (i.e., x-ray crystal structures, etc.) modeling of protein structures.
- Apply evolutionary concepts to modeling DNA/proteins to evaluate and/or predict function, utilizing 3D structures, physical and chemical amino acid properties, etc.
- Apply existing and develop new tools for genome assembly and annotation from next-generation DNA sequencing projects

BIO 468 : (Bio-MMBio-PWS) Genomics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PWS 340

DESCRIPTION: Current analysis of genes and genomes; computational and statistical approaches for analyzing genomic data, including genome sequencing and annotation, gene expression and the transcriptome, proteomics and functional genomics, and genetic variation and SNPs.

Course Outcomes
- Students will complete a series of exercises with data representing genomic experiments (analysis and interpret).
- Students will describe how genomes are sequenced.
- Students will understand techniques and concepts to assess genomic features such as methylation, gene expression, etc.

BIO 470 : History and Philosophy of Biology. (3:1.5:1.5)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 350

DESCRIPTION: Development of fundamental generalizations of biology; nature of science; applications to major philosophical issues of current science.

Course Outcomes

- Students will demonstrate an understanding of the history of biology. This will include an understanding of the major figures and the historical development of modern biology. This will include having read original texts from the periods covered (Aristotle to Current Biology).
- Students will also have an understanding of principal philosophical issues confronting modern biology, including major research trends in philosophy of biology. The students will also have a grasp of what 'science' is, how it is practiced, and what expectations for knowledge can be justified using science.
- Students will have the ability to read and write about the primary literature both on the history, and the philosophy, of science. They will have a grasp of the terminology used in philosophy, and how philosophy of biology is currently practiced. Writing will be emphasized.

BIO 475 : Plant Developmental Biology. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.
PREREQUISITE: PWS 340
RECOMMENDED: Bio 220B.
DESCRIPTION: Developmental mechanisms controlling plant development, with particular emphasis on genetic and molecular regulation.

Course Outcomes
There are no course outcomes available

BIO 476 : Biology Student Teaching. (12:0:0)

WHEN TAUGHT: Winter
PREREQUISITE: Completion of all course work or departmental approval; major GPA of 2.85; at least a C in Sc Ed 377.
DESCRIPTION: Field-based, semester-long experience in teaching secondary students; demonstrating proficiency in all program standards. Seminar (Sc Ed 490R) required.

Course Outcomes

- Students will integrate all ten principles of the Interstate New Teacher Assessment and Support Consortium (INTASC) in the design of an instructional unit.
- Students will demonstrate the ten goals and standards of the Interstate New Teacher Assessment and Support consortium.
- Students will demonstrate increased competence and confidence in their teaching abilities.
- Students will demonstrate appropriate classroom management techniques in a public school setting.

BIO 494R : Mentored Research. (1-6:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Supervisor's consent.
DESCRIPTION: Independent student research under faculty supervision.

Course Outcomes

- Students will demonstrate an understanding of the methods of scientific inquiry.
- Students will demonstrate an ability to design and implement a research project in a specialized area.
- Students will effectively interpret, analyze, and present results of experimentation to others.
- Students will show an appreciation for and understanding of the specialized field.

: Aquatic Biology.

Course Outcomes

: Bioinformatics.

Course Outcomes

: Ecology.

Course Outcomes

: Electron Microscopy.

Course Outcomes

: Entomology.

Course Outcomes

: Evolution.

Course Outcomes

: Marine Biology.

Course Outcomes

: Plant Biology.

Course Outcomes

: Systematics.

Course Outcomes

: Veterinary Science.

Course Outcomes

: Medicinal Botany.

Course Outcomes

: Plant Biochemistry.

Course Outcomes

: Fungal Biology.

Course Outcomes

500-Level Graduate Courses (available to advanced undergraduates)

BIO 503 : Research Orientation. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: Introduction to graduate school and research techniques.

Course Outcomes

- Create personalized literature databases and use these to correctly cite and format bibliographic information.
- Generate an effective CV that targets their next level of employment.
- Optimize opportunities available to them at scientific meetings to establish collaborative networks with other students, postdocs and faculty.
- Prepare an effective poster and oral presentation.
- Prepare and submit a competitive grant proposal.
- Prepare publication quality illustrations, figures, charts & graphs and eventually a manuscript for publication.
- Communicate their ideas effectively and appropriately through electronic media.
- Devise an active learning lesson plan for effectively teaching a biological principle.

BIO 510 : Biological Systematics and Curation. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

DESCRIPTION: Principles, methods, and tools of taxonomy and systematics as applied to species delimitation, specimen-based research, nomenclatural codes, and the curation of biological specimens.

Course Outcomes

- Students will be able to discuss species as the fundamental unit of biodiversity and the difference between species definitions and criteria used to delimit species.
- Students will be able to discuss basic philosophies of classification and the relationship between classification, phylogeny, and nomenclature.
- Students will gain proficiency with nomenclatural codes and their relationship to specimen-based research products such new species descriptions, monographs, floras, and faunas.
- Students will gain experience with a variety of specimen-based research tools.
- Students will understand responsibilities of biological collections management and curation.

BIO 511 : Lichenology. (3:2:3)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Classification, morphology, and ecology on lichens. Field trip required.

Course Outcomes

- Research and characterize the nature of the lichen symbiosis.
- Develop a working knowledge of lichen biology.
- Demonstrate an understanding of the role of lichens as biomonitors of air quality.
- Develop basic skills for collecting, processing, and identifying lichens.
- Develop basic skills with:- Thin-layer chromatography – lichen secondary chemistry.- Molecular techniques – to characterize genetic patterns and relationships at the population level.
- Prepare research manuscripts for review and publication consideration.
- Present a research proposal for a project using lichens as air quality biomonitors.

BIO 512 : Angiosperm Phylogeny. (3:2:4)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Bio 430 or equivalent.

DESCRIPTION: Description, classification, phylogeny, and geographic distribution of flowering plant families.

Course Outcomes

- Students will be able to discuss the primary pattern of relationships among flowering plants as supported by contemporary research.â ¨â ¨
- Students will demonstrate proficiency in tree-thinking and the application of phylogenetic terminology in discussing angiosperm relationships.
- Students will demonstrate knowledge of world-wide flowering plant diversity, including examples of model organisms, convergence, and evolutionary novelties.
- Students will be able to discuss contemporary research in flowering plant diversity, including outstanding problems where additional research is needed.

BIO 525 : Animal Disease, Biosecurity, and Zoonoses. (3:3.0:0)

WHEN TAUGHT: Winter

PREREQUISITE: Bio 380 or instructor's consent.

DESCRIPTION: Animal disease emphasizing prevention, organ systems affected, biosecurity, and zoonotic potential.

Course Outcomes

- Comparative pathophysiology will be taught using canine, feline, bovine, ovine, caprine, equine, lab animals, and wildlife examples
- Understand basic animal pathophysiology of disease on an organ system basis and preventive measures to

maintain animal health
- Identify biosecurity practices to prevent animal disease
- Differentiate between zoonoses, sapronoses and anthroponoses and understand how to institute preventive measures and management practices to avert these health problems
- Design a herd health program with preventive measures that addresses nutrition, sanitation, housing, ventilation, lighting, and other components for a particular species the student wants to work with as a producer
- Understand how to institute good management procedures that can prevent the occurrence of animal disease
- Develop a basic knowledge of animal immunology as it pertains to disease induction and prevention, with natural and artificial immunity practices that should be implemented to enhance disease prevention, and nutritional practices to optimize animal immunity

BIO 541 : Aquatic Entomology. (4:2:4)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: Bio 441 or equivalent.

DESCRIPTION: Morphology, classification, biology, and functional ecology of aquatic insects. Field trips required.

Course Outcomes
- Develop an appreciation for the diversity of the living aquatic insect world.
- Learn to become better stewards of the earth and its living inhabitants.
- Understanding of all aquatic biology.

BIO 550 : Physiological and Chemical Ecology. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Bio 350 or equivalent.

DESCRIPTION: Ecophysiological response of plants to their environment.

Course Outcomes
- Students will be able to apply sound reasoning using their biological literacy of the above disciplines in evaluating the experimental design and outcomes of peer-reviewed articles.
- Students will understand and be able to explain basic biological concepts in the fields of physiological and chemical ecology.
- Students will learn how to effectively communicate the arguments and evidences presented in the scientific literature of these disciplines, and evaluate the contribution of the research to advances in the field of chemical ecology.

BIO 555 : Evolutionary and Ecological Modeling. (2:2:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: Senior status in bioinformatics program or graduate status; Stat 511, 512, or equivalent; instructor's consent.

DESCRIPTION: Using models in ecology. Practical experience in analytical, simulation, and agent-based models.

Course Outcomes
There are no course outcomes available

BIO 556 : Limnology. (3:2:4)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Bio 350, Chem 106; or equivalents.

DESCRIPTION: Lakes, reservoirs; their biota and physical/chemical properties.

Course Outcomes
- Understand the major physical processes that form and characterize lentic habitats.
- Understand the dominant chemical processes that occur in lake systems.
- Understand how organisms adapt to the above physical and chemical constraints.
- Gain teaching experience through preparing a Powerpoint presenting your study presentation to the class.
- Experience pursuing a focused research topic from the initial question to a competed report.

BIO 557 : Stream and Wetland Ecology. (4:3:4)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Bio 350, Chem 106; or equivalent.

DESCRIPTION: Stream and wetland ecology; their biota and their physical/chemical properties.

Course Outcomes
- Develop an understanding of streams and wetlands within the broader context of ecology and conservation.
- Become familiar with the major conservation issue in streams and wetlands and the underlying ecological concepts.
- Initial exposure to the current literature.
- Develop skills related to critical thinking. That is, learn how to: a) read critically and summarize information, b) draw conclusions and synthesize information to develop new questions and hypotheses, and c) design experiments or comparative studies. It is important to start early to learn how to think, read, and write critically.

BIO 559R : Advanced Topics in Ecology and Evolution. (1-6:ARR:ARR)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Instructor's consent.

DESCRIPTION: Current topics in ecology, evolution, and systematics.

Course Outcomes
- Students will demonstrate an understanding of the methods of scientific inquiry.
- Students will demonstrate an ability to design and implement a research project in ecology and evolution.

Students will effectively interpret, analyze, and present results of experimentation to others.
- Students will show an appreciation for and understanding of ecology and evolution.

: Advanced Ecology.

Course Outcomes

: Advanced Systematics.

Course Outcomes

: Evolutionary Biology.

Course Outcomes

: Biogeography.

Course Outcomes

: Physiological Ecology.

Course Outcomes

: Tropical Biology.

Course Outcomes

: Biological Science Education.

Course Outcomes

: Field Biology.

Course Outcomes

BIO 560 : Population Genetics. (4:4:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Bio 420 or equivalent.

DESCRIPTION: Basic principles of population genetics applied to natural populations; drift, selection, and nonrandom mating; inferring population subdivision, migration, and gene flow.

Course Outcomes
- Students will gain a general introduction to the field a population genetics.
- Students will experience the broad application of population genetics to diverse fields from ecology to medicine.
- Students will manipulate and analyze population genetic data, especially molecular data.

BIO 580 : Scanning Electron Microscopy. (3:2:4)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Instructor's consent.

DESCRIPTION: Theoretical and practical scanning electron microscopy of biological, physical science, and engineering samples, emphasizing practical applications.

Course Outcomes
- Students will be able to prepare specimens for the ESEM.
- Students will be able to collect publishable data from the ESEM.
- Students will make a presentation of the research they conducted on the ESEM.

BIO 581 : Transmission Electron Microscopy. (3:2:4)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Instructor's consent.

DESCRIPTION: Theoretical and practical transmission electron microscopy of biological, physical science, and engineering samples, emphasizing practical applications.

Course Outcomes
- Students will be able to perform routine biological specimen preparation.
- Students will be able to operate the Transmission Electron Microscope to acquire images.
- Students will be able to appropriately interpret and present TEM data.
- Students will understand the reasons for various techniques that are used, the major components of the microscope, and the several applications of the technology.

BIO 589R : Advanced Science In-Service. (1-5:ARR:ARR)

WHEN TAUGHT: Summer

DESCRIPTION: In-service course for science teachers. Topics vary.

Course Outcomes
There are no course outcomes available

: Ecology Science In-Service.

Course Outcomes

: Genetics Science In-Service.

Course Outcomes

: Evolution Science In-Service.

Course Outcomes

: Botany Science In-Service.

Course Outcomes

: Meterology Science In-Service.

Admission to Degree Program

Please see Life Sciences Student Services for specific details on enrolling in each major.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

Undergraduate Programs and Degrees

BS in Athletic Training (Program Outcomes)
BS in Exercise and Wellness (Program Outcomes)
BS in Exercise Science (Program Outcomes)

Students should see Life Sciences Student Services for help or information concerning the undergraduate programs.

BS in Athletic Training (64 hours*)

Show All Course Descriptions
Hide All Course Descriptions

The Discipline

The study of athletic training appeals to those who would like to work in a field that combines an athletic setting with health and medical care. A student in athletic training will learn to apply knowledge of human anatomy, exercise physiology, conditioning, nutrition, and therapy in the prevention, diagnosis, immediate care, and rehabilitation of athletic injuries.

Students must graduate from an accredited athletic training program and pass the Board of Certification (BOC) examination to certify as an athletic trainer.

Career Opportunities

Career possibilities include working with athletic teams at all levels of competition or in a sports medicine clinical setting or other allied health facilities or in a corporate/industrial setting. BOC certification is required and an advanced degree is recommended.

Program Requirements | View MAP | View Program Outcomes

1. The Exercise Sciences Department requires a minimum of 45 major hours to be taken in residence at BYU for this degree program. These hours may also go toward BYU's 30-hour residency requirement for graduation.
2. Complete application into the athletic training program during semester of enrollment in ExSc 320. See the program director or ExSc 320 instructor for an application packet.
   - Have a physical examination and provide an immunization record to verify technical standards.
   - Submit one letter of recommendation.
   - Interview with the athletic training staff.
   - Complete 30 hours of clinical observation or experience in a college or high school athletic training setting and complete observation objectives.
3. Complete the senior exit interview.
4. Maintain CPR/AED certification for the professional rescuer.
5. Meet the technical standards associated with the athletic training education program.
6. Complete the following:

EXSC 302 : Philosophical and Ethical Issues in Exercise Sciences. (1:1:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Philosophical and ethical issues common to exercise sciences majors. Concept of mind, body, spirit.

Course Outcomes

- Learn contemporary tenets of philosophy that will serve as a basis for understanding important ideas in our own cultural tradition as well as that of others.
- Comprehend philosophical worldviews to facilitate respectful relationships with others.
- Pursue truth, think clearly and communicate effectively one's own beliefs and values; deepen one's understanding of the nature of being.
- Comprehend and apply the truths of the gospel of Jesus Christ. Reflect devout love of God and a loving, genuine concern for the welfare of others in the learning environment.
- Acquire/reinforce a profound respect for the divine nature of one's own life, a reverence for one's value, the purpose of one's life and a desire to live a healthy lifestyle.
- Articulate one's valuing of the entire self, bodymindspirit, with particular focus on the meaning and importance of the physical body.
- Strengthen the formulation of own personal and professional philosophy establishing clear standards of integrity. Improve the communication of one's beliefs, written and verbal.
- Analyze contemporary issues from an ethical standpoint. Demonstrate own professional ethical behavior, think critically and take an informed position on an issue.

EXSC 320 : Basic Athletic Training. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 220; Some majors require concurrent enrollment in ExSc 321. Check MAP requirements for major.

DESCRIPTION: Recognition, evaluation, and care of athletic injuries. Techniques in taping, preventing, and rehabilitating injuries.

Course Outcomes

- Review general responsibilities, roles, and tasks of athletic trainers, physical therapists, and otherallied health professionals involved in sports medicine.
- Learn assessment, first aid, and treatments for common musculoskeletal injuries.
- Examine methods of injury prevention including conditioning principles, environmental hazards,and protective equipment.
- Learn and utilize resources available to sports medicine professionals.
- Apply knowledge to practical situations.

EXSC 321 : Basic Athletic Training Lab. (.5:0:.5)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Concurrent enrollment in ExSc 320.
NOTE: Fee.

Course Outcomes

- Demonstrate competency and proficiency in taping the ankle, foot, lower leg, knee, thigh/hip,shoulder, elbow, wrist, thumb, and finger joints.
- Demonstrate competency and proficiency in wrapping the ankle, foot, lower leg, thigh/hip,shoulder, elbow, wrist, thumb, and finger joints.
- Demonstrate competency and profiency in wound care management.
- Demonstrate competency and profiency in injury evaluation.
- Demonstrate competency and profiency in injury treatment management.
- Demonstrate competency and profiency in spineboarding and splinting.

EXSC 362 : Kinesiology and Biomechanics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Math 110 or higher.
RECOMMENDED: Phscs 105 or 121; PDBio 220.

Course Outcomes

- Demonstrate application of physical laws to human performance.
- Calculate kinematics of human motion.
- Show comprehension of projectile motion equations.
- Determine changes of motion due to forces.
- Demonstrate understanding of how fluids generate force.

EXSC 390 : Advanced Musculoskeletal Human Anatomy (includes lab). (4:3:2)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: PDBIO 220; Majors Only
RECOMMENDED: ExSc 362 or equivalent.
DESCRIPTION: Advanced examination of structure and function of skeletal, articular, muscular, and peripheral nervous systems with clinical applications; cadaver lab included.

Course Outcomes

- Upon completion of this class students will be able to accomplish the following:Be familiar with the anatomical terms and their meanings for the human skeletal, peripheral nervous, articular, and muscular systems in relation to movement and orthopaedics.
- Identify and discuss the structures, functions and inter-relationships of the human skeletal, peripheral nervous, articular, and muscular systems with respect to movement.

EXSC 414 : Advanced Athletic Training Lab. (1:0:2)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Athletic training major status.
DESCRIPTION: Advanced athletic training skills, including taping, bracing and splinting, custom-fitted equipment, massage and stretching techniques, and emergency splinting and transport.

Course Outcomes

- At the end of this course, the student will demonstrate competency in each of the following CAATE competencies:Select and fit appropriate standard protective equipment on the patient for safe participation in sport and/or physical activity. This includes but is not limited to: Shoulder Pads, Helmet/Headgear, Footwear, Mouthguard, Prophylactic Knee Brace, Prophylactic Ankle Brace, Other Equipment (as appropriate)
- Select, fabricate, and apply appropriate preventive taping and wrapping procedures, splints, braces, and other special protective devices. Procedures and devices should be consistent with sound anatomical and biomechanical principles.
- Obtain, interpret, and make decisions regarding environmental data. This includes, but is not limited to the ability to:RM-P6.2. Formulate and implement a comprehensive, proactive emergency action plan specific to lightening safety
- Apply commonly used special tests and instruments (e.g., otoscope, stethoscope, ophthalmoscope, peak flowmeter, chemical “dipsticks” [or similar devices]) and document the results for the assessment of: Vital signs including respiration (including asthma), pulse and circulation, and blood pressure
- Implement appropriate emergency treatment strategies, including but not limited to:AC-P3c Establish and maintain an airway in a patient wearing shoulder pads, headgear or other protective equipment and/or with a suspected spine injury
- Instruct the patient in proper techniques of commonly prescribed therapeutic exercises.
- Develop risk management plans, including facility design, for safe and efficient health care facilities.
- Develop a risk management plan that addresses issues of liability reduction; security, fire, and facility hazards; electrical and equipment safety; and emergency preparedness.
- Develop policy and write procedures to guide the intended operation of athletic training services within a health care facility.

EXSC 415 : Therapeutic Modalities. (3:2:2)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Athletic training major status.

DESCRIPTION: Hydrotherapy, massage, traction, radiant energy, heat, cold, and electrotherapy.

Course Outcomes

- The student will demonstratethe ability to properly select the appropriateparameters, prepare, and apply a(n):a.cold whirlpool treatmentb.controlled cold therapy unitc.ice bagd.vapo-coolant spraye.ice immersionf.ice massageg.contrast bathh.cryokinetics
- The student will demonstratethe ability to properly select appropriateparameters, prepare, and apply a(n):a.moist heat packb.paraffin treatmentc.warm whirlpool treatmentd.fluidotherapye.diathermyf.infrared
- The student will demonstratethe ability to properly select appropriateparameters, prepare, and apply a(n):a.sensory-level pain control treatmentb.noxious-level pain control treatmentc.motor-level pain control treatmentd.muscle re-education treatmente.muscle pumping treatmentf.acute edema treatmentg.chronic edema treatmenth.muscle spasm treatmenti.muscle splinting treatmentj.muscle atrophy retardation treatmentk.iontophoresis treatmentl.MENS treatment
- The student will demonstrate proficiency in thesetup and application of the following types ofelectrical stimulation units:a.Monophasic stimulator (e.g., high voltstimulation)b.Biphasic stimulator (e.g., TENS, NMES)c.Direct current (e.g., iontophoresis)d.Alternating current (e.g., interferential,NMES)
- The student will demonstrate theability to properly select appropriateparameters, prepare, and apply a:a.thermal direct/indirect ultrasound treatmentb.non-thermal direct/indirect ultrasoundtreatmentc.combination electric-stimulation/ultrasoundtreatmentd.phonophoresis treatment
- The student will demonstrate theability to properly select appropriateparameters, prepare, and apply:a.mechanical tractionb.manual tractionc.positional traction
- The student willdemonstrate the ability to properly selectappropriate parameters, prepare, and applyintermittent compression.
- The student will demonstrate theability to prepare and apply a massagetreatment.The student will demonstrate the ability toproperly perform massage strokes.a.effleurageb.petrissagec.frictiond.tapotemente.vibration

EXSC 416 : Injury Evaluation: Lower Extremities. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Athletic training major status.

DESCRIPTION: Basic principles of injury evaluation; evaluation techniques specific to lower-extremity injuries.

Course Outcomes

- Instruct the patient how to properly perform fitness tests to assess his or her physical status and readiness for physical activity. Interpret the results of these tests according to requirements established by appropriate governing agencies and/or a physician. These tests should assess: Muscular Endurance, Agility, Speed.
- Develop a fitness program appropriate to the patient's needs and selected activity or activities that meet the requirements established by the appropriate governing agency and/or physician for enhancing: Cardiovascular Endurance, Speed
- Perform inspection/observation of the clinical signs associated with common injuries including deformity, posturing and guarding, edema/swelling, hemarthrosis, and discoloration.Palpate the bones and soft tissues to determine normal or pathological characteristics.Measure the active and passive joint range of motion using commonly accepted techniques, including the use of a goniometer and inclinometer.Grade the resisted joint range of motion/manual muscle testing and break tests.Apply appropriate stress tests for ligamentous or capsular stability, soft tissue and muscle, and fractures.Apply appropriate special tests for injuries to the specific areas of the body as listed above.Assess neurological status, including cranial nerve function, myotomes, dermatomes and reflexes, and circulatory status. Document the results of the assessment including the diagnosis.
- Obtain a medical history of the patient that includes a previous history and a history of the present condition. Perform a visual observation of the clinical signs associated with common injuries and/or illnesses including deformity, edema/swelling, discoloration, and skin abnormalities.Palpate the bones and soft tissues, including the abdomen, to determine normal or pathological characteristics.

EXSC 417 : Injury Evaluation: Upper Extremities and Trunk. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 416

DESCRIPTION: Injury evaluation techniques specific to the upper extremities and trunk.

Course Outcomes

- Upon completion of this course, the student will understand and be able to explain and/ordemonstrate by performance on an exam:1. Mechanisms of common injuries in various sports.
- Basic principles of evaluation and diagnostic terminology.
- Signs and symptoms of upper extremity injuries.
- Specific steps in injury evaluation.
- Evaluation techniques, including special tests, used to identify and assess degree ofdisability of the upper extremity.
- Proficiency in performing manual muscle testing of the upper extremity.
- Proficiency in performing girth and goniometric measurements of the upperextremity.
- Basic on-the-field/off-the-field injury management.

EXSC 418 : Rehabilitation of Orthopedic Injuries. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 415

DESCRIPTION: Basic principles, techniques, and progression of orthopedic/musculoskeletal rehabilitation.

Course Outcomes

- 1. Understand tissue healing and how therapeutic exercise affects tissue healing.
- 2. Understand the concept of functional progression and how it guides individual rehabilitation protocols. Rehabilitation is not a recipe that fits all people.
- 3. Apply and understand therapeutic exercise, range of motion, and manual therapy techniques to

enhance the goals within a rehabilitation plan for athletic injury.
- 4. Synthesize the different goals of rehabilitation to be combined for any injury and condition to return the patient to full activity.

EXSC 419 : Medical Issues in Athletic Training. (1:1:0)

WHEN TAUGHT: Winter

PREREQUISITE: ExSc 417 or concurrent enrollment.

DESCRIPTION: Discussion of current medical issues in athletic training with guest lectures by medical specialists.

Course Outcomes
- Advanced seminar type class for exposure to a variety of medical conditions, given from MD's point of view.
- Learn a medical doctor's approach to illnesses which athletes commonly experience.
- Integrate the athletic trainer's responsibility as it pertains to a team approach with the physician.

EXSC 423 : Administration of Athletic Training Programs. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 415

DESCRIPTION: Management and administration of athletic training facilities and staff members.

Course Outcomes
- Explain the importance of planning, coordinating, and supervising in the administration of an athletic training room/program.
- Explain various budgeting systems and develop budgets for high school and collegiate athletic training programs.
- Design athletic training facilities to meet specific needs.
- Explain the significance of state regulation for the athletic training profession and its relationship to 3rd party reimbursement.
- Explain the impact that insurance and 3rd party reimbursement has on athletic training.
- Be able to develop emergency plans for athletic training settings.
- Explain the elements of negligence and to understand legal issues facing athletic trainers, as well as the role of risk management.
- Explain how to efficiently and effectively organize pre-participation exams.
- Explain key concepts in personnel management, including communication, motivation, evaluations, etc.
- Explain the role of technology and information management in athletic training settings.
- Develop and incorporate individual leadership skills; as well as increase personal awareness, gain self-confidence, and foster cohesive and caring relationships.

EXSC 460 : Orthopaedic Impairments and Therapeutic Exercise. (3:3:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 220 & EXSC 390

DESCRIPTION: Fundamentals of body mechanics and therapeutic exercise, coupled with kinesiological principles for detection and correction of basic neuromusculoskeletal anomalies.

Course Outcomes
- Upon completion of this class students will be able to accomplish the following:Demonstrate an understanding of basic orthopedic terminology dealing with posture, movement and pathology.
- Demonstrate an understanding of traditional, osteokinematic and arthrokinematic movement
- Demonstrate an understanding of therapeutic exercise particularly active-resistive exercise and manual muscle testing and manual passive exercise and stretching.
- Be able to perform a postural evaluation, both grossly and at individual joints
- Demonstrate an understanding of the etiology, clinical significance and treatment of congenital and acquired orthopedic impairments of the upper and lower extremities and trunk.
- Where applicable, be able to write a therapeutic exercise program for the orthopedic impairments discussed in class.
- Demonstrate an understanding of normal and pathologic gait.

EXSC 463 : Exercise Physiology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: PDBIO 305; or PDBIO 362

RECOMMENDED: Concurrent enrollment in ExSc 464.

DESCRIPTION: The function of the physiological systems and their responses to acute and chronic exercise.

Course Outcomes
- Describe the substrates used, amount and rate of ATP resynthesized, metabolic end products, and control of anaerobic and aerobic metabolic pathways.
- Describe the responses to acute bouts of exercise and the mechanisms of the observed response, and the physiological adaptations which occur as a result of physical conditioning.
- Describe the physiological rationale for applying the eight principles of physical conditioning to improve health, fitness, and performance.
- Describe the depolarization of skeletal muscle beginning at the spinal cord and ending with the contraction of the muscle fiber.
- Describe the transportation and diffusion of O2and CO2 through the pulmonary and systemic circuits at rest and during exercise.
- Describe the anatomical, physiological, and functional differences between the three types of huma skeletal muscle fibers.
- Describe the interaction of the nervous, muscle, cardiovascular, pulmonary, and metabolic systems at rest and during exercise.
- Describe the normal anatomy and physiology of the heart, blood, and blood vessels; describe the normal function of the cardiovascular system at rest and during exercise.
- Describe how the human body functions and maintain homeostasis during the increased metabolic demands of exercise.
- Describe the function of sympathetic, parasympathetic, and somatic motor neurons, including

differences in structure, neurotransmitters, receptors and efferent organs.

EXSC 464 : Exercise Physiology Lab. (.5:0:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: ExSc 463 or concurrent enrollment.

DESCRIPTION: Introduction of laboratory and field methods; applying principles of exercise physiology to assessing physical fitness and physiological responses to exercise.

Course Outcomes

- The purpose of this class is to apply knowledge of exercise physiology to the assessment of the fivecomponents of health related physical fitness. The labs are the means to review and apply the physiologyof exercise and to develop and practice fundamental skills related to the assessment of physical fitness.

EXSC 468 : Problems in Exercise Prescription. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 463

DESCRIPTION: Applying scientific principles to problems in conditioning.

Course Outcomes

- At the conclusion of the course, the student will be able to write prescriptions of activity forindividuals of selected levels of age and fitness for the following:A. Endurance1. Speed/Explosive endurance2. Anaerobic endurance3. Aerobic endurance B. Strength1. Beginners2. Athletes3. Body builders C. Nutrition D. Weight Control1. Weight loss2. Weight gain E. Flexibility F. Plyometricssion of the course, the student will be able to write prescriptions of activity forindividuals of selected levels of age and fitness for the followingAt the conclusion of the course, the student will be able to write prescriptions of activity forindividuals of selected levels of age and fitness for the following

EXSC 501 : Sports Medicine Pathology and Pharmacology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ExSc 320, PDBio 305; or equivalents.

DESCRIPTION: Sports medicine pathologies and related pharmacology for a variety of sports medicine/allied health care professions.

NOTE: Meets required NATA athletic training educational competencies.

Course Outcomes

- After completing this course, the student will:1. Synthesize basic knowledge of human anatomy and physiology to develop knowledge of the causes, pathophysiology, and clinical features of the various conditions affecting the body. Considering you have completed a physiology course you will be required to recall that information
- 6. Understand basic pharmacokinetics and pharmacodynamics principles.
- 8. Describe proper maintenance and documentation of records for the administration of prescription and nonprescription drugs.
- 7. Understand advantages and disadvantages of common routes used to administer medications.
- 2. Analyze relationships between inflammation, repair, regeneration, and healing as they relate to pharmacological intervention.
- 9. Utilize reference sources for pharmacological information.
- 5. Synthesize patient information for prescription and nonprescription agents associated with the treatment and relief of symptoms from illness and injuries.
- 4. Understand clinical use of various prescription and nonprescription agents associated with the treatment and relief of symptoms from illnesses and injuries.
- 3. Evaluate clinico-pathological signs and symptoms for specific medical conditions that assist the sport medicine/allied health care clinician in correlating findings in determining the course of action for illness and disease.
- 11. Identify sources of current banned-drug lists published by various associations.
- 10. Describe basic concepts of organizing and coordinating a drug testing and screening program.

NDFS 310 : Nutrition and Metabolism in Sports and Exercise. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: NDFS 100 & PDBIO 305

DESCRIPTION: Scientific basis for the role of nutrition in human performance. Critical evaluation of popular practices; making optimal food choices for physical activity.

NOTE: This course was formerly named Sports Nutrition.

Course Outcomes

- Students will apply their current understanding of nutrition to aspects of physical performance. Describe the factors (exercise intensity, duration, substrate availability and endocrine) that affect energy utilization.
- Search, interpret, and summarize original scientific information. Evaluate nutritional claims for scientific accuracy.
- Apply evidence-based nutrition recommendations for sports and exercise in real or hypthetical situations.

PDBIO 220 : Human Anatomy (with lab). (3:2:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Structure and function of the human body. Lab included.

Course Outcomes

- Students will demonstrate an understanding of the basic microscopic underpinnings of tissue structures and be able to name them.

- Students will demonstrate a greater understanding and appreciation for the human body, it's overall design and connections to other living organisms, and what a marvelous creation it is.
- Students will be able to list the name, location, and function of each of the body's organs and organ systems.

PDBIO 305 : Human Physiology (with lab). (4:4:2)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Chem 101 or equivalent.
RECOMMENDED: A general biology course.
DESCRIPTION: Function of body organ systems.
NOTE: Not acceptable for physiology and developmental biology, biophysics, or neuroscience majors. Designed for students with basic chemistry / no molecular biology. Students with chemistry/molecular biology should take PDBio 362.

Course Outcomes

- Students will demonstrate the proper use of physiology terminology.
- Student will demonstrate a well-integrated and comprehensive understanding of the human body in health and disease.
- Students will use knowledge of cells and organ systems to solve problems related to the function of the human body.
- Students will demonstrate the necessary knowledge and skills in physiology that are required for their majors and future aspirations for graduate and professional school.
- Students will develop and demonstrate in their daily lives a deeper appreciation and respect for the human body.
- Students will demonstrate the knowledge to make informed personal (medical,ethical,and political)decisions regarding physiological concepts.

PSYCH 111 : Introduction to Psychological Science. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Basic course in modern scientific psychology.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

- Objective: Apply psychological principles to personal and social issues and problems.Measurement:Examinations, quizzes, comprehensive final examination that includes questions common to all Psychology 111 sections, response papers to essays written by practicing research psychologists or term paper.
- Objective: Demonstrate a broad knowledge of the basic theoretical perspectives that guide psychological inquiry.Measurement: Examinations, quizzes, comprehensive final examination that includes questions common to all Pyychology 111 sections.
- Objective: Understand the basic research methods used in psychology, including classical and current experiments.Measurement: Examinations, quizzes, comprehensive final examination that includes questions common to all Psychology 111 sections, response papers to essays written by practicing research psychologists or term paper, participation as a subject in actual psychological research.

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: MATH 110 or equivalent.
DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

7. Complete the following (to be taken last semester prior to graduation):

EXSC 498 : Capstone Experience in Athletic Training. (2:2:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Senior standing in athletic training education program.
DESCRIPTION: Synthesizing and integrating student classroom and clinical experiences in preparation for BOC examination resulting in certification of allied health professionals.
NOTE: Course should be taken last semester prior to graduation.

Course Outcomes

- Explain, describe and complete the BOC exam registration process.

- Design and follow athletic training content exam preparation schedule.
- Understand the possibilities of practice in AT.
- Explain the significance of BOC certification and state regulation for the athletic training profession.
- Define deficiencies in you athletic training education knowledge and skills.
- Develop and implement emergency plans in the practice of athletic training.
- Explain legal issues facing athletic trainers.
- Explain the role of technology and information management in athletic training settings.
- Understand the requirements to maintain BOC certification.
- BOC Exam Preparation= Professional Practice Preparation
- Have completed all NATA Education Council competencies.

8. Complete the following:

EXSC 394 : Athletic Training Clinical Education 1. (2:1:5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Athletic training major status.

DESCRIPTION: Classroom and field experience. Orientation to athletic training program and clinical expectations. Modules include emergency care, taping skills, and basic modalities.

Course Outcomes

- After completing this course, the student will be able to understand the administrative roles and policies of various health care organizations including:a. CAATEb. NATAc. BOC
- Demonstrate the skills necessary for accurate record keeping including SOAP notes and correct documentation of HOPS
- Understand purchasing policies for supplies
- Correctly devise and implement emergency action plans
- Demonstrate the necessary skills for care of emergency conditions
- Demonstrate care and necessary skills for treating open wounds
- 1. Demonstrate correct use, including indications and contraindications for therapeutic modalities including:a. Hot Packsb. Ultrasoundc. Cryotherapyd. Electrical stimulation
- 1. Demonstrate correct evaluation techniques of lower extremities including:a. Footb. Anklec. Lower Legd. Kneee. Hip

EXSC 395 : Athletic Training Clinical Education 2. (2:1:5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 394

DESCRIPTION: Classroom and field experience. Modules include taping skills, assessment, and modalities.

Course Outcomes

- Demonstrate rehabilitation skills, including aquatic therapy, joint mobilizations, proprioception, neuromuscular control, and agility exercises.
- Demonstrate competency and clinical proficiency in taping and bracing.
- Demonstrate the skills necessary to properly evaluate and care for upper extremity injuries including shoulder, elbow, forearm, wrist, hand, head and face, and thorax and abdomen.
- Demonstrate the use of the following rehabilitation tools: Alter G machine and Rebounder

EXSC 494 : Athletic Training Clinical Education 3. (2:1:5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 395

DESCRIPTION: Classroom and field experience. Modules include injury assessment and management, rehabilitation skills, and knowledge of general medical conditions.

Course Outcomes

- After completing this course, the student will be able to:1. Understand and apply administrative policies and procedures.
- Demonstrate general medical assessment skills.
- Understand how to care for and prevent various general medical (respiratory, cardiac,gastric, genitourinary) pathologies.

EXSC 495 : Athletic Training Clinical Education 4. (2:1:5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 494

DESCRIPTION: Classroom and field experience. Modules include injury assessment and management, rehabilitation skills, nutrition, and dermatology.

Course Outcomes

- After completing this course, the student will:1. Demonstrate understanding of pharmacology, pharmacological processes, and the university'smedication policies and procedures.
- Demonstrate knowledge of basic nutrition guidelines for athletes.
- Demonstrate knowledge of eating disorders and disordered eating and possess the ability tointervene with athletes who suffer from such disorders.
- Demonstrate the skills necessary to properly evaluate, care for, rehabilitate, and prevent upper and lower extremity injuries.
- Demonstrate the skills necessary to properly evaluate, care for, and prevent various generalmedical (common syndromes and diseases, dermatology) pathologies. Full evaluation and treatment from on-the-field to return-to-play.

Note: These courses must be completed over a two-calendar-year period. The athletic training clinical education courses listed above require field experience hours as part of the athletic training curriculum.

Recommended Courses

HLTH 320 : Advanced First Aid and Safety. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: In-depth coverage of first aid procedures for injuries and sudden illness. Leads to first aid and CPR certifications.

Course Outcomes

- Demonstrate the skills involving cardiopulmonary rescuitation (CPR), automated external defibrillation (AED), bandaging, and splinting.
- Identify the importance of first aid and emergency care
- Recognize specific emergency problems (i.e., heart attack, fracture, open wound, burn insect sting) through their signs and symptoms.
- Identify the decisions involved during an emergency.
- Describe proper first aid and emergency care procedures for specific emergency problems.

STDEV 170 : Introduction to Health Professions. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Overview of health professions: medical, dental, and other specialties. Primary focus on guest lectures from various practitioners and clinicians.

Course Outcomes

- 1. Students will gain a basic understanding of a significant number of health professions.
- 2. Students will increase knowledge of health professions through class presentations with health care professionals.
- 3. Students will learn more about health care provision through service learning in preparation for service-oriented health professions.
- 4. Students will increase awareness of the requirements to enter various health professions and where to find additional information about their preferred health care field.

*Hours include courses that may fulfill university core requirements.

BS in Exercise and Wellness (60.5 hours*)

Show All Course Descriptions
Hide All Course Descriptions

The Discipline

Exercise and Wellness is a departure from the typical U.S. medical model in that the focus is on helping individuals achieve optimal health and fitness rather than on discovering and treating disease. Recent research findings, along with rising health-care costs, have spurred an interest in keeping people healthy to improve their quality of life and also to avoid unnecessary medical expenses.

Depending on electives completed, there are several excellent career and graduate school options to pursue. Earning a master's degree in exercise science, for example, can give the added knowledge and experience needed to direct a private, commercial, corporate, or clinical health/fitness program. Other graduate school opportunities include a master's in public health (MPH), business administration (MBA), recreational therapy (MS), or nutritional science (MS), to name a few.

Career Opportunities

Exercise and wellness professionals find employment primarily in commercial or community fitness centers but may also work in hospital wellness programs or corporate health-promotion programs. Job responsibilities typically involve teaching clients how to achieve optimal wellness through effective exercise, wholesome nutrition, and successful stress-management strategies.

Exercise and wellness professionals may function at a staff or management level. Staff personnel often conduct one-on-one counseling sessions on a variety of health-related subjects as well as perform fitness testing and exercise prescription. They also may conduct workshops, conferences, or seminars on exercise, nutrition, stress management, weight control, and many other topics.

Program directors typically possess a master's degree with several years of experience working in a health promotion/wellness environment. As a program director, additional responsibilities typically include financial budgeting, marketing, program administration and evaluation, and personnel hiring and training.

Students pursuing a degree in exercise and wellness are usually more successful in their profession if they gain expertise in the following areas: counseling, public speaking, behavior change, business, first aid, gerontology, or aerobic dance teaching. It is also strongly recommended that students obtain a health/fitness certification through a reputable certifying organization.

Survey data indicate that personal trainers earn $51,000 annually in the U.S. Throughout the U.S. salaries range from $37,000 to $63,000. Health promotion program directors' salaries are similar to those of personal trainers, with more earning potential for individuals with graduate degrees and/or experience.

Program Requirements | View MAP | View Program Outcomes

1. Complete the senior exit interview.
2. Complete the following prerequisites to the exercise and wellness core:

HLTH 320 : Advanced First Aid and Safety. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: In-depth coverage of first aid procedures for injuries and sudden illness. Leads to first aid and CPR certifications.

Course Outcomes

- Demonstrate the skills involving cardiopulmonary rescuitation (CPR), automated external defibrillation (AED), bandaging, and splinting.
- Identify the importance of first aid and emergency care
- Recognize specific emergency problems (i.e., heart attack, fracture, open wound, burn insect sting) through their signs and symptoms.
- Identify the decisions involved during an emergency.
- Describe proper first aid and emergency care procedures for specific emergency problems.

NDFS 100 : Essentials of Human Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Food-oriented study of nutritional facts and principles as a basis for dietary choices; consequences of choices; scientifically examining controversial topics.

Course Outcomes

- Apply the scientific method to identify and interpret credible nutrition information.
- Identify, interpret, and apply nutrition information.
- Identify functions of nutrients and their major food sources.

PDBIO 220 : Human Anatomy (with lab). (3:2:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Structure and function of the human body. Lab included.

Course Outcomes

- Students will demonstrate an understanding of the basic microscopic underpinnings of tissue structures and be able to name them.
- Students will demonstrate a greater understanding and appreciation for the human body, it's overall design and connections to other living organisms, and what a marvelous creation it is.
- Students will be able to list the name, location, and function of each of the body's organs and organ systems.

PDBIO 305 : Human Physiology (with lab). (4:4:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

RECOMMENDED: A general biology course.

DESCRIPTION: Function of body organ systems.

NOTE: Not acceptable for physiology and developmental biology, biophysics, or neuroscience majors. Designed for students with basic chemistry / no molecular biology. Students with chemistry/molecular biology should take PDBio 362.

Course Outcomes

- Students will demonstrate the proper use of physiology terminology.
- Student will demonstrate a well-integrated and comprehensive understanding of the human body in health and disease.
- Students will use knowledge of cells and organ systems to solve problems related to the function of the human body.
- Students will demonstrate the necessary knowledge and skills in physiology that are required for their majors and future aspirations for graduate and professional school.
- Students will develop and demonstrate in their daily lives a deeper appreciation and respect for the human body.
- Students will demonstrate the knowledge to make informed personal (medical,ethical,and political)decisions regarding physiological concepts.

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

TMA 150 : Public Speaking. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Principles and methods of public speaking; speaking experiences.

Course Outcomes

- Develop analytical listening and observation skills.
- Know how to speak publicly so your audience will really listen and understand.
- Construct and deliver effective extemporaneous public speeches.
- Manage speech anxiety and effective use nonverbal communication to inform, persuade, enlighten, and impact your audience.
- Be able to produce and employ effective visual aids in your presentations.

3. Complete the following required core:

EXSC 302 : Philosophical and Ethical Issues in Exercise Sciences. (1:1:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Philosophical and ethical issues common to exercise sciences majors. Concept of mind, body, spirit.

Course Outcomes

Learn contemporary tenets of philosophy that will serve as a basis for understanding important ideas in our own cultural tradition as well as that of others.
- Comprehend philosophical worldviews to facilitate respectful relationships with others.
- Pursue truth, think clearly and communicate effectively one's own beliefs and values; deepen one's understanding of the nature of being.
- Comprehend and apply the truths of the gospel of Jesus Christ. Reflect devout love of God and a loving, genuine concern for the welfare of others in the learning environment.
- Acquire/reinforce a profound respect for the divine nature of one's own life, a reverence for one's value, the purpose of one's life and a desire to live a healthy lifestyle.
- Articulate one's valuing of the entire self, bodymindspirit, with particular focus on the meaning and importance of the physical body.
- Strengthen the formulation of own personal and professional philosophy establishing clear standards of integrity. Improve the communication of one's beliefs, written and verbal.
- Analyze contemporary issues from an ethical standpoint. Demonstrate own professional ethical behavior, think critically and take an informed position on an issue.

EXSC 387 : Lifestyle and Chronic Disease Prevention. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Current scientific evidence demonstrating how lifestyle affects disease processes. Healthy lifestyle concepts specifically needed by wellness professionals, health educators, and health promotion practitioners; influence of unhealthy lifestyle as basis for chronic diseases, i.e., cardiovascular disease, cancer, and diabetes.

Course Outcomes
- Develop an awareness of what constitutes a healthy lifestyle
- Understand the use and interpretation of statistical techniques used in scientific papers on health and lifestyle
- Become familiar with the scientific literature that supports healthy living
- Gain knowledge needed to help others adopt and maintain a healthy lifestyle

EXSC 410 : Stress Management. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Practical experience in learning to understand and manage stress.

Course Outcomes
- Master the basic understanding of the physiological mechanisms responsible for the fight-or-flight response and subsequent manifestations of various symptoms of target organ dysfunctions. Be able to apply this understanding to stress management and disease prevention.
- Understand and discuss the holistic nature (mind-body-spirit) of stress management and comprehend the mind-body connection of the stress and disease process.
- Be able to recognize potential stressors and develop strategies to prevent (or reduce the magnitude) these stressors from eliciting a stress response.
- Be able to develop strategies to reduce daily stressors.
- Understand the principles behind the various relaxation techniques and be able to apply these techniques to managing stress.

EXSC 463 : Exercise Physiology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: PDBIO 305; or PDBIO 362

RECOMMENDED: Concurrent enrollment in ExSc 464.

DESCRIPTION: The function of the physiological systems and their responses to acute and chronic exercise.

Course Outcomes
- Describe the substrates used, amount and rate of ATP resynthesized, metabolic end products, and control of anaerobic and aerobic metabolic pathways.
- Describe the responses to acute bouts of exercise and the mechanisms of the observed response, and the physiological adaptations which occur as a result of physical conditioning.
- Describe the physiological rationale for applying the eight principles of physical conditioning to improve health, fitness, and performance.
- Describe the depolarization of skeletal muscle beginning at the spinal cord and ending with the contraction of the muscle fiber.
- Describe the transportation and diffusion of O2and CO2 through the pulmonary and systemic circuits at rest and during exercise.
- Describe the anatomical, physiological, and functional differences between the three types of huma skeletal muscle fibers.
- Describe the interaction of the nervous, muscle, cardiovascular, pulmonary, and metabolic systems at rest and during exercise.
- Describe the normal anatomy and physiology of the heart, blood, and blood vessels; describe the normal function of the cardiovascular system at rest and during exercise.
- Describe how the human body functions and maintain homeostasis during the increased metabolic demands of exercise.
- Describe the function of sympathetic, parasympathetic, and somatic motor neurons, including differences in structure, neurotransmitters, receptors and efferent organs.

EXSC 464 : Exercise Physiology Lab. (.5:0:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: ExSc 463 or concurrent enrollment.

DESCRIPTION: Introduction of laboratory and field methods; applying principles of exercise physiology to assessing physical fitness and physiological responses to exercise.

Course Outcomes
- The purpose of this class is to apply knowledge of exercise physiology to the assessment of the

fivecomponents of health related physical fitness. The labs are the means to review and apply the physiologyof exercise and to develop and practice fundamental skills related to the assessment of physical fitness.

EXSC 480 : Obesity and Weight Management. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ExSc 463 or concurrent enrollment.

DESCRIPTION: Review of the scientific literature surrounding obesity and weight management, primarily the causes and consequences of this growing epidemic.

Course Outcomes

- Demonstrate an understanding of the historical framework and prevalence of overweight/obesity in adults and children.
- Understand the etiology and health risks related to overweight/obesity.
- Describe the economic costs and social consequences associated with overweight/obesity.
- Demonstrate an understanding of the principles of energy balance.
- Understand methods of assessing overweight/obesity, body composition, diet, and physical activity.
- Demonstrate an understanding of various methods of treating overweight/obesity including: diet, physical activity, behavioral, pharmacological, and surgical interventions.
- Demonstrate an understanding of pediatric, family and public interventions to prevent or attenuate the rise in obesity.
- Have a personal experience applying weight management strategies.
- These learning objectives will be achieved through class lectures, student projects, scientific readings, and in-class activities. Students will be evaluated through written exams, quizzes and projects.

4. Complete four hours from the following:

EXSC 399R : Exercise and Wellness Internship. (.5-9:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Internship coordinator's consent.

DESCRIPTION: On-the-job experience for exercise and wellness majors.

Course Outcomes

- Gain work-related experience through one or more internship experiences
- Apply, in a work-related setting, the skills and abilities attained through required course work in the Exercise and Wellness major

5. Complete 25 hours from the following:

- Complete a minimum of 18 hours from the following:

EXSC 320 : Basic Athletic Training. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 220; Some majors require concurrent enrollment in ExSc 321. Check MAP requirements for major.

DESCRIPTION: Recognition, evaluation, and care of athletic injuries. Techniques in taping, preventing, and rehabilitating injuries.

Course Outcomes

- Review general responsibilities, roles, and tasks of athletic trainers, physical therapists, and otherallied health professionals involved in sports medicine.
- Learn assessment, first aid, and treatments for common musculoskeletal injuries.
- Examine methods of injury prevention including conditioning principles, environmental hazards,and protective equipment.
- Learn and utilize resources available to sports medicine professionals.
- Apply knowledge to practical situations.

EXSC 321 : Basic Athletic Training Lab. (.5:0:.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Concurrent enrollment in ExSc 320.

NOTE: Fee.

Course Outcomes

- Demonstrate competency and proficiency in taping the ankle, foot, lower leg, knee, thigh/hip,shoulder, elbow, wrist, thumb, and finger joints.
- Demonstrate competency and proficiency in wrapping the ankle, foot, lower leg, thigh/hip,shoulder, elbow, wrist, thumb, and finger joints.
- Demonstrate competency and profiency in wound care management.
- Demonstrate competency and profiency in injury evaluation.
- Demonstrate competency and profiency in injury treatment management.
- Demonstrate competency and profiency in spineboarding and splinting.

EXSC 362 : Kinesiology and Biomechanics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Math 110 or higher.

RECOMMENDED: Phscs 105 or 121; PDBio 220.

Course Outcomes

- Demonstrate application of physical laws to human performance.
- Calculate kinematics of human motion.

- Show comprehension of projectile motion equations.
- Determine changes of motion due to forces.
- Demonstrate understanding of how fluids generate force.

EXSC 365 : Scientific Bases of Sport: Kinesiology. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Kinesiology and biomechanics for physical education/coaching minor.

Course Outcomes

- Students will demonstrate how to apply physical laws to human performance. Included physical laws deal with: Linear motion, projectile motion, forces, impulse and momentum, fluid mechanics, and tissue mechanics.

EXSC 385 : Personal Training Strategies. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: The art and science of personal fitness training for healthy adults, utilizing safe and effective techniques to develop and maintain optimal functional fitness (proper posture, balance, joint mobility, and stability), and optimal physical fitness (cardiorespiratory endurance, flexibility, muscular strength, and power).

Course Outcomes

- Explain and apply the essential concepts and principles of human movement science, anatomy, exercise physiology; biomechanics, motor learning; functional fitness assessment; stability training, mobility training, core training, balance training, reactive training, resistance training, cardiorespiratory training; exercise programming; nutrition and weight management; safety and injury prevention in an understandable and accurate way
- Prepare to certify as a Certified Personal Trainer (CPT) through the National Academy of Sports Medicine (NASM)

EXSC 390 : Advanced Musculoskeletal Human Anatomy (includes lab). (4:3:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 220; Majors Only

RECOMMENDED: ExSc 362 or equivalent.

DESCRIPTION: Advanced examination of structure and function of skeletal, articular, muscular, and peripheral nervous systems with clinical applications; cadaver lab included.

Course Outcomes

- Upon completion of this class students will be able to accomplish the following:Be familiar with the anatomical terms and their meanings for the human skeletal, peripheral nervous, articular, and muscular systems in relation to movement and orthopaedics.
- Identify and discuss the structures, functions and inter-relationships of the human skeletal, peripheral nervous, articular, and muscular systems with respect to movement.

EXSC 455 : Worksite Health Promotion. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 387 & EXSC 463

DESCRIPTION: Managing, designing, marketing, implementing, assessing, and administering health promotion programs in a worksite setting.

Course Outcomes

- Be able to demonstrate an understanding of the health promotion concept, historical background of worksite health promotion programs, and the rationale for companies to provide a health promotion program. This objective will be accomplished through class lecture/discussion and students will be evaluated through quizzes and exams.
- Better understand each of the following components in the design and execution of a worksite health promotion program: determining needs and interests of employers and employees, writing vision/mission/goal statements best practices, creating a company culture of wellness, launching a program, incentives/rewards, and company wellness policies. This will be accomplished through lectures and a semester project.
- Increase their understanding of effective health assessments and how to interpret the assessments. This will be accomplished through lectures and evaluated through quizzes and exams.
- Increase their understanding of how to effectively evaluate programs. This will be accomplished through lectures and evaluated through quizzes and exams.
- Be able to demonstrate the essential elements of common worksite health promotion programs, such as, physical activity, nutrition, weight management, medical self-care, stress management, substance abuse/tobacco control, and back care programs. This will be accomplished through lectures and class presentations.
- Gain practical experience and learning from experts in the field. This will be accomplished through the following: 1) each student will critique an existing worksite wellness program and present their findings to the class, 2) approximately 5 class periods will be devoted to studying transcripts of various interviews with experts in the field, and 3) 5 class periods will include visiting lecturers who are currently working in the field.
- Develop a worksite health promotion program through a semester class project.
- Have the opportunity to work in conjunction with a team to develop a health display to be presented to the class.

EXSC 468 : Problems in Exercise Prescription. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 463

DESCRIPTION: Applying scientific principles to problems in conditioning.

Course Outcomes
- At the conclusion of the course, the student will be able to write prescriptions of activity forindividuals of selected levels of age and fitness for the following:A. Endurance1. Speed/Explosive endurance2. Anaerobic endurance3. Aerobic endurance B. Strength1. Beginners2. Athletes3. Body builders C. Nutrition D. Weight Control1. Weight loss2. Weight gain E. Flexibility F. Plyometricssion of the course, the student will be able to write prescriptions of activity forindividuals of selected levels of age and fitness for the followingAt the conclusion of the course, the student will be able to write prescriptions of activity forindividuals of selected levels of age and fitness for the following

EXSC 485 : Exercise and Wellness Certification Preparation. (3:3:0)

PREREQUISITE: Senior status.

DESCRIPTION: Review of exercise and wellness certification competencies and curriculum with preparation for professional certification.

Course Outcomes
- Explain and apply the essential concepts and principles of pathophysiology; exercise physiology; health appraisal and fitness testing; exercise programming; nutrition and weight management; anatomy and biomechanics; human behavior and psychology; human development and aging; and safety and injury prevention in an understandable and accurate way
- Prepare to certify as a Health and Fitness Specialist (HFS) through the American College of Sports Medicine (ACSM)

HLTH 335 : Health Behavior Change. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: Hlth 330.

DESCRIPTION: Understanding health behavior change theories for individuals and populations. Practical application of related models and theories.

Course Outcomes
- Evaluate the ability of selected socio-behavioral theories and models for furthering understanding of important public health problems and issues, with particular reference to health promotion and disease prevention.
- Identify prominent features and constructs in commonly used theories and models of health behavior change.
- Identify the important role of culture in the context of behavior change.

HLTH 345 : Principles of Epidemiology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: Stat 121.

DESCRIPTION: Applying analytical tools to study acute and chronic disease to facilitate investigation and control of epidemics.

Course Outcomes
- Investigate disease outbreaks.
- Describe basic concepts, definitions, and history of Epidemiology.
- Describe patterns of disease occurrence.
- Interpret Epidemiologic studies.
- Evaluate treatment effectiveness.
- Measure disease frequency and association.
- Distinguish between statistical association and cause-effect relationships.
- Know basic design strategies in Epidemiology.

HLTH 460 : Substance Abuse and Addictive Behavior. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Physiological, psychological, sociological, and legal implications of drug use and addictive behaviors, emphasizing nature, cause, treatment, and prevention.

Course Outcomes
- Explain substance use and abuse from a multidisciplinary perspective.
- List and describe specific social policies that reduce alcohol, tobacco, and other drug use.
- Explain the major social determinants and predictors of substance use in the United States.
- Explain the biological basis of drug addiction.
- Describe the health problems and risk associated with specific drugs.
- Describe the marketing, public relations, and political activities of the tobacco and alcohol industries.
- Provide the descriptive epidemiology of substance abuse in the United States.

NDFS 201 : Society, Nutrition, and Chronic Disease. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 100

DESCRIPTION: Behavioral, dietary, and environmental factors that influence nutrition and risks for chronic disease.

Course Outcomes
- Explain or describe how behavioral, dietary, and environmental factors influence nutrition and chronic disease risks.
- Find scientific research articles and identify their key characteristics. Identify consistencies or

inconsistencies in studies of diet and chronic disease risks.
- Apply information about behavioral, dietary, and environmental factors to reduce chronic disease risks.

NDFS 310 : Nutrition and Metabolism in Sports and Exercise. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: NDFS 100 & PDBIO 305

DESCRIPTION: Scientific basis for the role of nutrition in human performance. Critical evaluation of popular practices; making optimal food choices for physical activity.

NOTE: This course was formerly named Sports Nutrition.

Course Outcomes
- Students will apply their current understanding of nutrition to aspects of physical performance. Describe the factors (exercise intensity, duration, substrate availability and endocrine) that affect energy utilization.
- Search, interpret, and summarize original scientific information. Evaluate nutritional claims for scientific accuracy.
- Apply evidence-based nutrition recommendations for sports and exercise in real or hypthetical situations.

PDBIO 365 : Pathophysiology. (4:4:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 305; or PDBIO 362

DESCRIPTION: Variations in physiological mechanisms that account for development of common disturbances in normal control and activities of body's organs and organ systems.

Course Outcomes
- Students will exhibit an integrative understanding of the biochemistry, molecular biology, genetics, cell biology, microbiology, environmental biology, and physiology related to the prevention, development, and treatment of common diseases.
- Students will demonstrate through case study analysis a command of problem solving skills related to the diagnosis and treatment of pathophysiological conditions.
- Pupils will manifest a command of the physiology and pathophysiological vocabulary necessary to effectively communicate with other biomedical professionals and the general public.
- Students will be able to articulate the ethical issues related to the treatment and prevention of pathophysiological conditions.
- Students will manifest an increase in their respect for the human body and adopt a life style consistent with this respect.

- Complete up to 7 hours from the following:

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.

DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

Course Outcomes
- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.
- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

BUS M 201 : Financial Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Acc 200 or equivalent.

DESCRIPTION: Financial statement analysis, financial planning, sources of financing, working capital management, risk and return, and valuation.

Course Outcomes
- Use fundamental analysis to conduct a firm performance evaluation.
- Construct a financial forecast for a term.
- Employ time value of money to solve common financial problems.
- Make corporate investment decisions using capital budgeting.
- Be able to value firms, bonds, and stocks.
- Understand how entrepreneurial and corporate finance differ.

BUS M 241 : Marketing Management. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Marketing's role in society and the firm, marketing opportunities, the consumer market, and management of marketing mix.

Course Outcomes

- Understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers.
- Describe how specific firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Design a marketing plan for a new venture by applying the appropriate tools and approaches studied

BUS M 371R : Entrepreneurship Lecture Series. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Lectures by successful entrepreneurs on subjects significant to entrepreneur-type opportunities.

Course Outcomes

- Recognize and resolve ethical challenges and choices in specific organizational contexts.
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life

BUS M 372 : Basic Entrepreneurship Skills. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Practical aspects of business formation and growth; key skills and principles needed to successfully start up and grow a business.

NOTE: For non-Marriott School of Management students.

Course Outcomes

- Participate effectively on an entrepreneurial founding team and help create a start-up business.
- Formulate strategies to overcome common start-up business challenges.
- Write self-reflective papers on a variety of business topics, articles, and books in order to help them discover their entrepreneurial spirit.
- Understand and apply entrepreneurial terminology, global enterprise issues, and ethical decision-making to business cases.

CHEM 101 : Introductory General Chemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 97 or equivalent.

DESCRIPTION: Atomic and molecular structure, periodic relationships, states of matter, chemical reactions and stoichiometry, acids and bases.

NOTE: Primarily for nonscience majors who require a broad introduction to general chemistry.

Course Outcomes

- Students will be able to view the world around them in chemical terms. Students will use the concepts of atoms, molecules, and their properties to understand a variety of phenomena.
- Students will be able to make qualitative and/or quantitative predictions regarding a number of chemical concepts including chemical reactions and stoichiometry, calorimetry, osmosis, gases, acid/base chemistry, chemical equilibria, and radioactivity.

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 285 : Introductory Bio-organic Chemistry. (4:4:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.
DESCRIPTION: Principles of organic chemistry and biochemistry relating to biomolecule structure and function.

Course Outcomes
- Students will understand the metabolism of carbohydrates, lipids, and proteins in humans. They will be able to describe in structures and words the metabolism of sugars through the pathways of glycolysis, the citric acid cycle, and the electron transport chain.
- Students will understand the structure and reactivity of organic functional groups, such as alcohols, aldehydes, carboxylic acids, and amides. For example, students will learn that aldehydes and ketones typically undergo addition reactions.
- Students will understand the structure and reactivity of the biomolecules that have those functional groups. For example, students will be able to demonstrate that carbohydrates are aldehydes and ketones that undergo addition reactions to form hemiacetals and polysaccharides with acetal linkages.

DANCE 336 : Methods of Teaching Aerobic Dance. (2:2:2)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: DANCE 342 & DANCE 343; or EXSC 362 & DANCE 343
RECOMMENDED: NDFS 100.

Course Outcomes
- 1. Students will identify scientific fitness principles regarding cardiovascular endurance, strength, flexibility and lean/fat body ratio.
- 2. Students will analyze important characteristics of teaching anatomically sound warm-up and cool down sessions and choreographing and teaching aerobic workouts based on sound physiological principles.
- 3. Students will evaluate and administrate physical fitness assessments.

EXSC 349 : Body, Mind, Spirit. (3:3:0)
OFFERED: Independent Study only. Honors also.
DESCRIPTION: Sacredness of the body and its meaningfulness to the whole being. Comparative approach utilizing ideas from the restored gospel and Western and Eastern philosophy (nature of being).

Course Outcomes
There are no course outcomes available

: Honors Body, Mind, Spirit.

Course Outcomes

HLTH 383 : Mind/Body Health. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Theories and research on the effect of emotions and attitudes on health: how negative emotions increase disease susceptibility and positive emotions encourage immune strength, health, and healing. Behavioral medicine and complementary and alternative health practices also presented.

Course Outcomes
- Identify and understand the connection between mental processes/beliefs and how they contribute to chronic and infectious disease.(Learning activities: lecture, class discussion, group presentations, videos)
- Identify and evaluate the behavioral, social, and cultural thought processes that contribute to disease.(Learning activities: lecture, class discussion, research study reviews, exams)

HLTH 438 : Social Marketing. (3:3:0)
WHEN TAUGHT: Spring
RECOMMENDED: Hlth 330, 332, 437.
DESCRIPTION: Social marketing, including formative research, audience analysis, segmentation, marketing mix, strategies, pretesting; application to health promotion and public health.

Course Outcomes
- Be able to develop a social marketing plan.

HLTH 450 : Women's Health Issues. (3:3:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Overview of selected health topics affecting women's health status. Primary emphasis on steps to enhance personal health and fulfill divine roles from childhood through adulthood.

Course Outcomes
- Identify and understand the determinants of women's health issues.(Learning activities: lecture, class discussion, videos, out of class activites, guest lecturers)
- Identify and report on specific chronic and infectious diseases that affect women.(Learning activities: lecture, class discussion, book review, guest lecture)
- Identify ways to improve women's health using a variety of assessment sources.(Learning activities: lecture, class discussion, review of CDC and other health statistics, interviews, guest lecture)

MMBIO 221 : General Microbiology. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Any biology course.
RECOMMENDED: Any chemistry course.
DESCRIPTION: Microbial world, emphasizing communicable diseases, their causes and control.
NOTE: Recommended for students seeking a liberal education in microbiology who do not have the prerequisites to take the more advanced courses.

Course Outcomes
- Explain and discuss the ways by which microbiologists study microorganisms.
- Discuss the principle infectious diseases that affect mankind, including how they are transmitted, treated, controlled and prevented.
- Differentiate between the types of microorganisms by identifying relevant structure and their function in the biosphere.
- Propose microbial solutions to global problems.
- Describe how the human body defends itself against infectious agents.

NDFS 200 : Nutrient Metabolism. (3:3:0)

WHEN TAUGHT: Fall; Spring
PREREQUISITE: NDFS 100; Organic chemistry or concurrent enrollment.
DESCRIPTION: Chemical structures of nutrients, their food sources, requirements, digestion, absorption, transport, metabolism, functions, storage and excretion; metabolic consequences of nutrient deficiencies, interactions, imbalances, and toxicities.

Course Outcomes
- Identify chemical structures of amino acids, lipids, carbohydrates, and vitamins.
- List functions, food sources, and consequences of deficiencies and toxicities for each of the essential nutrients.
- Explain the metabolic and physiological basis for the consequences of dietary practices that affect nutrient levels, and relate the consequences to the roles of essential nutrients in metabolic processes.
- Analyze diets and alter food intake to reach predetermined targets for consumption of specific dietary components or to achieve an overall dietary pattern.
- Find answers to questions and summarize results from original research reported in published peer-reviewed scientific journals.

ORG B 320 : Organizational Effectiveness. (3:Arr:0)

OFFERED: Independent Study also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Theories and concepts for creating effective organizations, e.g., individual, group, and organizational processes and human resource functions, including selection, compensation, and performance management.
NOTE: Taught online.

Course Outcomes
There are no course outcomes available

STDEV 170 : Introduction to Health Professions. (1:1:0)

WHEN TAUGHT: Fall; Winter
DESCRIPTION: Overview of health professions: medical, dental, and other specialties. Primary focus on guest lectures from various practitioners and clinicians.

Course Outcomes
- 1. Students will gain a basic understanding of a significant number of health professions.
- 2. Students will increase knowledge of health professions through class presentations with health care professionals.
- 3. Students will learn more about health care provision through service learning in preparation for service-oriented health professions.
- 4. Students will increase awareness of the requirements to enter various health professions and where to find additional information about their preferred health care field.

STDEV 317 : Career Strategies for Employment and Internships. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Preparing for employment and internship opportunities. Practical strategies to facilitate internship and/or career preparation: resumes, cover letters, networking, interviewing, and Internet research.

Course Outcomes
There are no course outcomes available

Note: Other elective courses may be taken with approval from the exercise and wellness major advisor.

*Hours include courses that may fulfill university core requirements.

BS in Exercise Science (59.5 hours*)

Show All Course Descriptions
Hide All Course Descriptions

The Discipline

The exercise science program is designed to prepare students for entry into graduate school in one of the disciplines related to exercise science or one of the health care professional schools.

Students majoring in exercise science explore how the body functions during physical activity and exercise. Principles and concepts taught in human anatomy and physiology, exercise physiology, biomechanics, motor learning, chemistry, physics, and nutrition are mastered to help understand how the body responds to acute bouts of exercise and how it adapts to chronic physical activity and exercise. The impact that physical activity and exercise have on one's capacity to do work, physical performance, as well as its impact on health and disease makes study of this discipline rewarding.

Career Opportunities

The exercise science degree provides excellent preparation for students interested in graduate work in exercise physiology (MS, PhD) or those desiring to pursue training in medicine, physical therapy, cardiac rehabilitation, podiatry, chiropractic, and other health care professions. Graduates with this major may also find opportunities in community, corporate, or hospital wellness centers and health promotion programs.

The major is designed to prepare students to enter graduate programs in several health-related professions; specifically exercise science master's and doctoral programs. Those who complete graduate work in exercise science are most likely to be employed as a professor/researcher in a university setting. In addition to graduate studies in exercise science, students are also prepared to attend medical school, dental school, osteopathy school, physician assistant and nursing programs, and chiropractic school.

Salary varies tremendously with the terminal degree sought, the choice of career specialty, and geographic location of employment or practice. Earnings for those with certain medical and dental specialties are potentially lucrative.

Program Requirements | View MAP | View Program Outcomes

1. Complete senior exit interview.
2. Complete the following:

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.
DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.
NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: CHEM 105; or CHEM 111
DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.
NOTE: Three lectures and one recitation section per week.

Course Outcomes

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105

including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

Course Outcomes
- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.

DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes
- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

NDFS 100 : Essentials of Human Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Food-oriented study of nutritional facts and principles as a basis for dietary choices; consequences of choices; scientifically examining controversial topics.

Course Outcomes
- Apply the scientific method to identify and interpret credible nutrition information.
- Identify, interpret, and apply nutrition information.
- Identify functions of nutrients and their major food sources.

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes
There are no course outcomes available

PDBIO 220 : Human Anatomy (with lab). (3:2:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Structure and function of the human body. Lab included.

Course Outcomes
- Students will demonstrate an understanding of the basic microscopic underpinnings of tissue structures and be able to name them.
- Students will demonstrate a greater understanding and appreciation for the human body, it's overall design and connections to other living organisms, and what a marvelous creation it is.
- Students will be able to list the name, location, and function of each of the body's organs and organ systems.

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: High school algebra and trigonometry.

RECOMMENDED: Concurrent enrollment in Phscs 107.

DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes

There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 105 or equivalent.
RECOMMENDED: Concurrent enrollment in Phscs 108.
DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes
There are no course outcomes available

PHSCS 107 : General Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Phscs 105 or concurrent enrollment.
DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 106 or concurrent enrollment
DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

3. Complete one of the following options:

Either

PDBIO 305 : Human Physiology (with lab). (4:4:2)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Chem 101 or equivalent.
RECOMMENDED: A general biology course.
DESCRIPTION: Function of body organ systems.
NOTE: Not acceptable for physiology and developmental biology, biophysics, or neuroscience majors. Designed for students with basic chemistry / no molecular biology. Students with chemistry/molecular biology should take PDBio 362.

Course Outcomes
- Students will demonstrate the proper use of physiology terminology.
- Student will demonstrate a well-integrated and comprehensive understanding of the human body in health and disease.
- Students will use knowledge of cells and organ systems to solve problems related to the function of the human body.
- Students will demonstrate the necessary knowledge and skills in physiology that are required for their majors and future aspirations for graduate and professional school.
- Students will develop and demonstrate in their daily lives a deeper appreciation and respect for the human body.
- Students will demonstrate the knowledge to make informed personal (medical,ethical,and political)decisions regarding physiological concepts.

Or

PDBIO 362 : Advanced Physiology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220
DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.
NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes
- Students will manifest an understanding of how structures at the molecular level lead to properties associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

PDBIO 363 : Advanced Physiology Laboratory. (1:.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: PDBio 362 or concurrent enrollment; or instructor's consent.

DESCRIPTION: Experiments and exercises in advanced physiology emphasizing human physiology. Computer simulations of muscle function, endocrine disease, and human physiology. Emphasizes problem solving and calculations.

Course Outcomes
- Students will demonstrate the skills required to properly interpret data from scientific experimentation to discover how physiological systems function.
- Students will manifest an understanding of basic physiological principles by modeling how human cells, organs, and organ systems function.
- Students will describe how interactions between human organ systems work to maintain homeostasis.

4. Complete the following major courses:

EXSC 302 : Philosophical and Ethical Issues in Exercise Sciences. (1:1:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Philosophical and ethical issues common to exercise sciences majors. Concept of mind, body, spirit.

Course Outcomes
- Learn contemporary tenets of philosophy that will serve as a basis for understanding important ideas in our own cultural tradition as well as that of others.
- Comprehend philosophical worldviews to facilitate respectful relationships with others.
- Pursue truth, think clearly and communicate effectively one's own beliefs and values; deepen one's understanding of the nature of being.
- Comprehend and apply the truths of the gospel of Jesus Christ. Reflect devout love of God and a loving, genuine concern for the welfare of others in the learning environment.
- Acquire/reinforce a profound respect for the divine nature of one's own life, a reverence for one's value, the purpose of one's life and a desire to live a healthy lifestyle.
- Articulate one's valuing of the entire self, bodymindspirit, with particular focus on the meaning and importance of the physical body.
- Strengthen the formulation of own personal and professional philosophy establishing clear standards of integrity. Improve the communication of one's beliefs, written and verbal.
- Analyze contemporary issues from an ethical standpoint. Demonstrate own professional ethical behavior, think critically and take an informed position on an issue.

EXSC 320 : Basic Athletic Training. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 220; Some majors require concurrent enrollment in ExSc 321. Check MAP requirements for major.

DESCRIPTION: Recognition, evaluation, and care of athletic injuries. Techniques in taping, preventing, and rehabilitating injuries.

Course Outcomes
- Review general responsibilities, roles, and tasks of athletic trainers, physical therapists, and otherallied health professionals involved in sports medicine.
- Learn assessment, first aid, and treatments for common musculoskeletal injuries.
- Examine methods of injury prevention including conditioning principles, environmental hazards,and protective equipment.
- Learn and utilize resources available to sports medicine professionals.
- Apply knowledge to practical situations.

EXSC 362 : Kinesiology and Biomechanics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Math 110 or higher.

RECOMMENDED: Phscs 105 or 121; PDBio 220.

Course Outcomes
- Demonstrate application of physical laws to human performance.
- Calculate kinematics of human motion.
- Show comprehension of projectile motion equations.
- Determine changes of motion due to forces.
- Demonstrate understanding of how fluids generate force.

EXSC 387 : Lifestyle and Chronic Disease Prevention. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Current scientific evidence demonstrating how lifestyle affects disease processes. Healthy lifestyle concepts specifically needed by wellness professionals, health educators, and health promotion practitioners; influence of unhealthy lifestyle as basis for chronic diseases, i.e., cardiovascular disease, cancer, and diabetes.

Course Outcomes
- Develop an awareness of what constitutes a healthy lifestyle
- Understand the use and interpretation of statistical techniques used in scientific papers on health and lifestyle
- Become familiar with the scientific literature that supports healthy living
- Gain knowledge needed to help others adopt and maintain a healthy lifestyle

EXSC 390 : Advanced Musculoskeletal Human Anatomy (includes lab). (4:3:2)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: PDBIO 220; Majors Only
RECOMMENDED: ExSc 362 or equivalent.
DESCRIPTION: Advanced examination of structure and function of skeletal, articular, muscular, and peripheral nervous systems with clinical applications; cadaver lab included.

Course Outcomes
- Upon completion of this class students will be able to accomplish the following:Be familiar with the anatomical terms and their meanings for the human skeletal, peripheral nervous, articular, and muscular systems in relation to movement and orthopaedics.
- Identify and discuss the structures, functions and inter-relationships of the human skeletal, peripheral nervous, articular, and muscular systems with respect to movement.

EXSC 460 : Orthopaedic Impairments and Therapeutic Exercise. (3:3:2)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: PDBIO 220 & EXSC 390
DESCRIPTION: Fundamentals of body mechanics and therapeutic exercise, coupled with kinesiological principles for detection and correction of basic neuromusculoskeletal anomalies.

Course Outcomes
- Upon completion of this class students will be able to accomplish the following:Demonstrate an understanding of basic orthopedic terminology dealing with posture, movement and pathology.
- Demonstrate an understanding of traditional, osteokinematic and arthrokinematic movement
- Demonstrate an understanding of therapeutic exercise particularly active-resistive exercise and manual muscle testing and manual passive exercise and stretching.
- Be able to perform a postural evaluation, both grossly and at individual joints
- Demonstrate an understanding of the etiology, clinical significance and treatment of congenital and acquired orthopedic impairments of the upper and lower extremities and trunk.
- Where applicable, be able to write a therapeutic exercise program for the orthopedic impairments discussed in class.
- Demonstrate an understanding of normal and pathologic gait.

EXSC 463 : Exercise Physiology. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: PDBIO 305; or PDBIO 362
RECOMMENDED: Concurrent enrollment in ExSc 464.
DESCRIPTION: The function of the physiological systems and their responses to acute and chronic exercise.

Course Outcomes
- Describe the substrates used, amount and rate of ATP resynthesized, metabolic end products, and control of anaerobic and aerobic metabolic pathways.
- Describe the responses to acute bouts of exercise and the mechanisms of the observed response, and the physiological adaptations which occur as a result of physical conditioning.
- Describe the physiological rationale for applying the eight principles of physical conditioning to improve health, fitness, and performance.
- Describe the depolarization of skeletal muscle beginning at the spinal cord and ending with the contraction of the muscle fiber.
- Describe the transportation and diffusion of O2and CO2 through the pulmonary and systemic circuits at rest and during exercise.
- Describe the anatomical, physiological, and functional differences between the three types of huma skeletal muscle fibers.
- Describe the interaction of the nervous, muscle, cardiovascular, pulmonary, and metabolic systems at rest and during exercise.
- Describe the normal anatomy and physiology of the heart, blood, and blood vessels; describe the normal function of the cardiovascular system at rest and during exercise.
- Describe how the human body functions and maintain homeostasis during the increased metabolic demands of exercise.
- Describe the function of sympathetic, parasympathetic, and somatic motor neurons, including differences in structure, neurotransmitters, receptors and efferent organs.

EXSC 464 : Exercise Physiology Lab. (.5:0:1)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: ExSc 463 or concurrent enrollment.
DESCRIPTION: Introduction of laboratory and field methods; applying principles of exercise physiology to assessing physical fitness and physiological responses to exercise.

Course Outcomes
- The purpose of this class is to apply knowledge of exercise physiology to the assessment of the fivecomponents of health related physical fitness. The labs are the means to review and apply the physiologyof exercise and to develop and practice fundamental skills related to the assessment of physical fitness.

5. Complete 8 hours from the following:

CHEM 285 : Introductory Bio-organic Chemistry. (4:4:1)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Chem 101 or equivalent.
DESCRIPTION: Principles of organic chemistry and biochemistry relating to biomolecule structure and function.

Course Outcomes
- Students will understand the metabolism of carbohydrates, lipids, and proteins in humans. They will be

able to describe in structures and words the metabolism of sugars through the pathways of glycolysis, the citric acid cycle, and the electron transport chain.
- Students will understand the structure and reactivity of organic functional groups, such as alcohols, aldehydes, carboxylic acids, and amides. For example, students will learn that aldehydes and ketones typically undergo addition reactions.
- Students will understand the structure and reactivity of the biomolecules that have those functional groups. For example, students will be able to demonstrate that carbohydrates are aldehydes and ketones that undergo addition reactions to form hemiacetals and polysaccharides with acetal linkages.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes
- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

Course Outcomes
- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 352 or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.

NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes
- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes
- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic

strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

EXSC 321 : Basic Athletic Training Lab. (.5:0:.5)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Concurrent enrollment in ExSc 320.
NOTE: Fee.

Course Outcomes
- Demonstrate competency and proficiency in taping the ankle, foot, lower leg, knee, thigh/hip,shoulder, elbow, wrist, thumb, and finger joints.
- Demonstrate competency and proficiency in wrapping the ankle, foot, lower leg, thigh/hip,shoulder, elbow, wrist, thumb, and finger joints.
- Demonstrate competency and profiency in wound care management.
- Demonstrate competency and profiency in injury evaluation.
- Demonstrate competency and profiency in injury treatment management.
- Demonstrate competency and profiency in spineboarding and splinting.

EXSC 455 : Worksite Health Promotion. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: EXSC 387 & EXSC 463
DESCRIPTION: Managing, designing, marketing, implementing, assessing, and administering health promotion programs in a worksite setting.

Course Outcomes
- Be able to demonstrate an understanding of the health promotion concept, historical background of worksite health promotion programs, and the rationale for companies to provide a health promotion program. This objective will be accomplished through class lecture/discussion and students will be evaluated through quizzes and exams.
- Better understand each of the following components in the design and execution of a worksite health promotion program: determining needs and interests of employers and employees, writing vision/mission/goal statements best practices, creating a company culture of wellness, launching a program, incentives/rewards, and company wellness policies. This will be accomplished through lectures and a semester project.
- Increase their understanding of effective health assessments and how to interpret the assessments. This will be accomplished through lectures and evaluated through quizzes and exams.
- Increase their understanding of how to effectively evaluate programs. This will be accomplished through lectures and evaluated through quizzes and exams.
- Be able to demonstrate the essential elements of common worksite health promotion programs, such as, physical activity, nutrition, weight management, medical self-care, stress management, substance abuse/tobacco control, and back care programs. This will be accomplished through lectures and class presentations.
- Gain practical experience and learning from experts in the field. This will be accomplished through the following: 1) each student will critique an existing worksite wellness program and present their findings to the class, 2) approximately 5 class periods will be devoted to studying transcripts of various interviews with experts in the field, and 3) 5 class periods will include visiting lecturers who are currently working in the field.
- Develop a worksite health promotion program through a semester class project.
- Have the opportunity to work in conjunction with a team to develop a health display to be presented to the class.

EXSC 468 : Problems in Exercise Prescription. (2:2:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: EXSC 463
DESCRIPTION: Applying scientific principles to problems in conditioning.

Course Outcomes
- At the conclusion of the course, the student will be able to write prescriptions of activity forindividuals of selected levels of age and fitness for the following:A. Endurance1. Speed/Explosive endurance2. Anaerobic endurance3. Aerobic endurance B. Strength1. Beginners2. Athletes3. Body builders C. Nutrition D. Weight Control1. Weight loss2. Weight gain E. Flexibility F. Plyometricssion of the course, the student will be able to write prescriptions of activity forindividuals of selected levels of age and fitness for the followingAt the conclusion of the course, the student will be able to write prescriptions of activity forindividuals of selected levels of age and fitness for the following

EXSC 470 : Functional Neuroanatomy. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: PDBIO 220 & EXSC 390
DESCRIPTION: Function, assessment, and rehabilitation of sensory and motor systems.

Course Outcomes
- 1. Describe the functional unit of the nervous system?2. Describe the pathways of three different messenging neurons.3. Explain glia?4. List the 4 regions of the nervous system.5. List the structures make-up the brain stem?6. Identify and label the circle of willis and associated arterial supply7. Explain the composition of white vs. gray matter.8. Describe and identify spinal cord anatomy and explain the DRG (dorsal root ganglion) and ventral rami?9. Describe and draw the gray and white matter in the spinal cord.10. List and identify the cranial nerves attach to the Pons?11. List and identify all cranial nerves and explain which are sensory, motor or mixed. 12. Describe the function of the

cerebellum. (see syllabus for expanded list)
- Upon completion of this class students will be able to accomplish the following:Be familiar with the neuroanatomical terms and their meanings for the central nervous system and peripheral nervous system in relation to systems and function.Be familiar with terminology of specific diseases and dysfunctions in relation to signs/symptoms and classic descriptionsBe familiar with the terminology of electrophysiologic testing of the peripheral nervous system as it relates to normal and abnormal function.
- Students will be able to identify and discuss the structures, pathways and functions of independent somatosensory and motor tracts as they relate to motor function, coordination, movement and sensory integration.

EXSC 497R : Undergraduate Research and Study. (.5-4:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Individual research and study in any area of exercise science.

Course Outcomes
- To provide the undergraduate student with a mentored learning experience specifically in exercise science related research

HLTH 310 : Chronic Diseases: Prevention and Control. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Pathogenesis, epidemiology of major chronic diseases, health costs to society, at-risk populations, population-based prevention, and related best-practice interventions.

Course Outcomes
There are no course outcomes available

HLTH 320 : Advanced First Aid and Safety. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: In-depth coverage of first aid procedures for injuries and sudden illness. Leads to first aid and CPR certifications.

Course Outcomes
- Demonstrate the skills involving cardiopulmonary rescuitation (CPR), automated external defibrillation (AED), bandaging, and splinting.
- Identify the importance of first aid and emergency care
- Recognize specific emergency problems (i.e., heart attack, fracture, open wound, burn insect sting) through their signs and symptoms.
- Identify the decisions involved during an emergency.
- Describe proper first aid and emergency care procedures for specific emergency problems.

HLTH 335 : Health Behavior Change. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: HIth 330.

DESCRIPTION: Understanding health behavior change theories for individuals and populations. Practical application of related models and theories.

Course Outcomes
- Evaluate the ability of selected socio-behavioral theories and models for furthering understanding of important public health problems and issues, with particular reference to health promotion and disease prevention.
- Identify prominent features and constructs in commonly used theories and models of health behavior change.
- Identify the important role of culture in the context of behavior change.

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes
- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

MATH 119 : Introduction to Calculus. (4:4:1)

OFFERED: Independent Study only.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 and Math 111; or equivalent.
DESCRIPTION: Introduction to plane analytic geometry and calculus.

Course Outcomes
- This course is designed to provide beginning undergraduate students a first exposure to Calculus concepts, theorems, and techniques. In general, theorems will not be proved. An understanding of the theorems and their applications to solve calculus problems will be taught. Students will be expected to develop effective problem solving skills based on their understanding of the theory and not just memorize a set of routines to solve problems. For a more detailed course description, visit the Math 119 Wiki page.

MMBIO 221 : General Microbiology. (3:3:0)
OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Any biology course.
RECOMMENDED: Any chemistry course.
DESCRIPTION: Microbial world, emphasizing communicable diseases, their causes and control.
NOTE: Recommended for students seeking a liberal education in microbiology who do not have the prerequisites to take the more advanced courses.

Course Outcomes
- Explain and discuss the ways by which microbiologists study microorganisms.
- Discuss the principle infectious diseases that affect mankind, including how they are transmitted, treated, controlled and prevented.
- Differentiate between the types of microorganisms by identifying relevant structure and their function in the biosphere.
- Propose microbial solutions to global problems.
- Describe how the human body defends itself against infectious agents.

MMBIO 222 : General Microbiology Laboratory. (1:0:2)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: MMBio 221 or concurrent enrollment.

Course Outcomes
- Use the bright field microscope to view and interpret microbiological specimens
- Use proper aseptic techniques int he handling and transfer of microbiological specimens
- Use standard microbiological media to culture and identify common microbiological specimens
- Use standard microbiology laboratory equipment correctly
- Follow an experimental protocol, collect and organize data, present data in an appropriate form, assess the validity of the data, and draw appropriate comclusions based on the results
- Integrate information and skills gained int eh course to make informed judgements about the role of microorganisms in everyday life
- Use accepted safety protocols when handling microbiological specimens and chemicals

MMBIO 241 : Molecular and Cellular Biology Laboratory. (1:0:3)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBio 240 or concurrent enrollment.
DESCRIPTION: Molecular and cellular biology techniques laboratory.

Course Outcomes
- Practice ethics and integrity by working with groups and following lab rules.*Relates to Program Learning Outcome: A commitment to professional integrity and ethical behavior consistent with themission of the university.
- Learn the basics of experimental design, how to formulate a hypothesis, what controls to use, how to interpret experimental data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Practice scientific communication through written lab questions, exams and oral presentations.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Learn molecular biology laboratory techniques through practical laboratory exercises. Techniques include, spectrophotometry,isolation of DNA and protein, quantification of DNA and protein, techniques used to purify or detect specific proteins, such aschromatography, western blot and ELISA, DNA fingerprinting, polymerase chain reaction and enzyme assays.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology.

NDFS 200 : Nutrient Metabolism. (3:3:0)
WHEN TAUGHT: Fall; Spring
PREREQUISITE: NDFS 100; Organic chemistry or concurrent enrollment.
DESCRIPTION: Chemical structures of nutrients, their food sources, requirements, digestion, absorption, transport, metabolism, functions, storage and excretion; metabolic consequences of nutrient deficiencies, interactions, imbalances, and toxicities.

Course Outcomes
- Identify chemical structures of amino acids, lipids, carbohydrates, and vitamins.
- List functions, food sources, and consequences of deficiencies and toxicities for each of the essential nutrients.
- Explain the metabolic and physiological basis for the consequences of dietary practices that affect nutrient levels, and relate the consequences to the roles of essential nutrients in metabolic processes.
- Analyze diets and alter food intake to reach predetermined targets for consumption of specific dietary components or to achieve an overall dietary pattern.
- Find answers to questions and summarize results from original research reported in published peer-reviewed scientific journals.

NDFS 201 : Society, Nutrition, and Chronic Disease. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 100

DESCRIPTION: Behavioral, dietary, and environmental factors that influence nutrition and risks for chronic disease.

Course Outcomes

- Explain or describe how behavioral, dietary, and environmental factors influence nutrition and chronic disease risks.
- Find scientific research articles and identify their key characteristics. Identify consistencies or inconsistencies in studies of diet and chronic disease risks.
- Apply information about behavioral, dietary, and environmental factors to reduce chronic disease risks.

NDFS 305 : Nutritional Implications of Disease. (4:4:0)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 200 & PDBIO 305

DESCRIPTION: Nutritional assessment and medical nutrition therapy across disease states.

NOTE: For nutritional science majors.

Course Outcomes

- Know the basic techniques and parameters used in nutritional assessment
- Identify the consequences of malnutrition and the inflammatory response as they relate to disease progression, disease treatment, cost, and quality of life
- Identify the pathophysiology, risk factors, nutritional assessment, and appropriate nutritional intervention of the following diseases: obesity, heart disease, pressure sores, cancer, diabetes, GI disorders, pulmonary diseases, kidney diseases, dialysis, osteoporosis, and nutritional anemias
- Identify the metabolic differences between starvation and metabolic stress including causes, consequences, and nutritional intervention
- Identify the basic principles of nutritional support including supplementation, tube feedings, and intravenous feedings
- Identify the major nutritional concerns in geriatric populations
- Identify the concept of evidence based practice and know how to find and interpret evidence based practice statements on the role of nutrition in the prevention and treatment of various conditions

NDFS 310 : Nutrition and Metabolism in Sports and Exercise. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: NDFS 100 & PDBIO 305

DESCRIPTION: Scientific basis for the role of nutrition in human performance. Critical evaluation of popular practices; making optimal food choices for physical activity.

NOTE: This course was formerly named Sports Nutrition.

Course Outcomes

- Students will apply their current understanding of nutrition to aspects of physical performance. Describe the factors (exercise intensity, duration, substrate availability and endocrine) that affect energy utilization.
- Search, interpret, and summarize original scientific information. Evaluate nutritional claims for scientific accuracy.
- Apply evidence-based nutrition recommendations for sports and exercise in real or hypthetical situations.

PDBIO 320 : Dissection Techniques in Human Anatomy. (1:0:3)

WHEN TAUGHT: Contact Department.

PREREQUISITE: PDBIO 220

DESCRIPTION: Techniques of human cadaver dissection.

Course Outcomes

- Students will demonstrate they understand the composition of the human body through successfully completing various dissection assignments on human cadavers.
- Students will manifest an increases preparation at both a spiritual and secular level, for professional training in the field of human health.

PDBIO 325 : Tissue Biology (with lab). (3:2:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120 & PDBIO 220

DESCRIPTION: Human anatomy and histology; function of cells in tissue; early stages of embryology.

NOTE: Course should be taken during a student's second or third year and before courses in physiology and developmental biology.

Course Outcomes

- Students will be able to communicate with health professionals effectively regarding tissue/organ anatomy and physiology in instances of health and disease.
- Students will demonstrate how the relationship between cell organization and cell function correlates with normal and pathological organ behavior.
- Students will be able to describe anatomical and physiological characteristics of epithelial, connective, nervous, and muscular tissue.

PDBIO 360 : Cell Biology. (3:3:1)

WHEN Fall; Winter; Spring

TAUGHT:
PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481
DESCRIPTION: Fundamentals of cell structure and function with reference to analytical methods used by cell biologists. Practice in designing, executing, and interpreting relative experiments.

Course Outcomes
- Students will demonstrate knowledge of the molecular architecture of the nucleus, including the nuclear envelope, nucleoplasm and nucleolus, chromatin, and the nuclear pore.
- Students will demonstrate an understanding of protein transport, including nuclear import and export and vesicular transport through the secretory and sorting pathways.
- Students will demonstrate knowledge of the molecular and cellular structure and dynamics of cytoskeletal systems.
- Students will be able to apply the basic cell biological principles in outcomes 1-3 to more complicated cellular processes, including cell adhesion, cell migration, cell polarity, cell division, cancer, and development.
- Students will demonstrate the ability to generate hypothesis about how cell biological systems work at the molecular level and design experiments that test that hypothesis.
- Students will demonstrate competence in interpreting original raw data from cell biology experiments, including microscopy, protein biochemistry, molecular biology, and genetics strategies
- Students will demonstrate the ability to critically evaluate primary cell biology literature, including the ability to evaluate the design and interpretation of experimental data.

PDBIO 365 : Pathophysiology. (4:4:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: PDBIO 305; or PDBIO 362
DESCRIPTION: Variations in physiological mechanisms that account for development of common disturbances in normal control and activities of body's organs and organ systems.

Course Outcomes
- Students will exhibit an integrative understanding of the biochemistry, molecular biology, genetics, cell biology, microbiology, environmental biology, and physiology related to the prevention, development, and treatment of common diseases.
- Students will demonstrate through case study analysis a command of problem solving skills related to the diagnosis and treatment of pathophysiological conditions.
- Pupils will manifest a command of the physiology and pathophysiological vocabulary necessary to effectively communicate with other biomedical professionals and the general public.
- Students will be able to articulate the ethical issues related to the treatment and prevention of pathophysiological conditions.
- Students will manifest an increase in their respect for the human body and adopt a life style consistent with this respect.

PDBIO 484 : Human Embryology. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: PDBio 360 or equivalent.
RECOMMENDED: PDBio 325.
DESCRIPTION: Developmental milestones of prenatal life: etiology of congenital malformations, emphasizing molecular and cellular changes and their functional consequences.

Course Outcomes
- Students will identify the developmental trajectories of the various organ systems and why abnormalities at any step in the lineage of organogenesis may cause birth defects.
- Students will be able to communicate with health professionals effectively regarding embryonic events from conception to birth and the ramifications of each event in instances of health and disease.
- Students will demonstrate how signaling between participating cells leads to important events during the first, second, third, and fourth weeks of development.

PDBIO 561 : Physiology of Drug Mechanisms. (3:2:3)
WHEN TAUGHT: Fall
PREREQUISITE: PDBIO 362
DESCRIPTION: Overview of physiological and pharmacological mechanisms and principles of human therapeutics as applied to clinically significant pathophysiology.

Course Outcomes
- Students will manifest an interactive understanding of drug mechanisms at the molecular, cellular, tissue, organ, and/or systemic levels.
- Students will demonstrate that they understand the cellular pathways targeted for pharmacological treatment.
- Pupils will demonstrate a comprehension of how the body interacts with compounds used for pharmacological treatments.
- Students will manifest the knowledge, skills and vocabulary necessary to converse with health care providers concerning their own and family's medical treatments.

PDBIO 565 : Endocrinology. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: PDBio 362 or instructor's consent.
DESCRIPTION: Mammalian hormones.

Course Outcomes
- Students will be able to describe major actions of each hormone on target cells.
- Students will be able to describe pathways for synthesis, post-translational processing, and cellular localization or secretion for peptide hormones and hormone receptors.

- Students will be able to describe pathways for synthesis and inactivation for steroid hormones, thyroid hormones, and catecholamines.
- Students will be able to describe the control of synthesis and secretion for each hormone, including feedback relationships.
- Students will be able to describe major signaling pathways in target cells for each hormone.
- Students will be able to describe methodologies used to test hypotheses in study of problems in endocrinology.
- Students will be able to describe and recognize etiology and clinical symptoms of the major endocrine diseases

PSYCH 111 : Introduction to Psychological Science. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Basic course in modern scientific psychology.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

- Objective: Apply psychological principles to personal and social issues and problems.Measurement:Examinations, quizzes, comprehensive final examination that includes questions common to all Psychology 111 sections, response papers to essays written by practicing research psychologists or term paper.
- Objective: Demonstrate a broad knowledge of the basic theoretical perspectives that guide psychological inquiry.Measurement: Examinations, quizzes, comprehensive final examination that includes questions common to all Pyychology 111 sections.
- Objective: Understand the basic research methods used in psychology, including classical and current experiments.Measurement: Examinations, quizzes, comprehensive final examination that includes questions common to all Psychology 111 sections, response papers to essays written by practicing research psychologists or term paper, participation as a subject in actual psychological research.

PSYCH 220 : Human Development: Life Span. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Interaction of psychological, biological, and social influences on behavior and psychological development through the life span.

Course Outcomes

- Students will understand and remember the basic developments that occur across the lifespan, the basic patterns of thought, emotion, and behavior characteristic of individuals at each stage of the lifespan, and the important individual and contextual influences on human development.Measurement: Multiple choice and short essay questions.
- Students will understand the key concepts and theories that are predominant in the literature on human development.Measurement: Multiple choice and short essay questions.
- Students will be able to more effectively communicate verbally and in writing about human development.Measurement: Research papers.
- Students will be able to analyze and critically evaluate ideas, arguments, and points of view about human development.Measurement: Research papers.
- Students will be able to apply knowledge of human development to addressing real-world issues.Measurement: Short writing assignments and in-class activities.

PSYCH 342 : Abnormal Psychology. (3:3:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Dynamics of maladjustment; major psychological disorders and therapeutic procedures. Fieldwork required.
NOTE: Contains content featured in the Graduate Record Examination (GRE).

Course Outcomes

- Students will identify and describe the major forms of psychological disorders and the major theories regarding the classification, etiology, and treatment of psychological disorders,and current data relevant to such theories.Measurement: Multiple choice, short answer and essay exams; short writing assignments.
- Students will engage in service learning by serving persons diagnosed with psychological disorders.Measurement: Participation assessment/field work report
- Students will critically examine key concepts and theories in abnormal psychology.Measurement: Essay exams, short writing assignments, in-class debates
- Students will examine and critique a topic in abnormal psychology using the current research literature.Measurement: APA style paper

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481
DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes

- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

SOC 111 : Introductory Sociology. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Social group influence; social interaction, processes, organization, and change; family, religion, government, population, culture, race relations.

Course Outcomes
There are no course outcomes available

SOC 112 : Current Social Problems. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Individual deviance (violence, insanity, drugs, sex, crime, etc.) and social disorganization (poverty, race and sex discrimination, divorce, overpopulation, etc.). Conditions, causes, solutions.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
There are no course outcomes available

: Honors Current Social Problems.

Course Outcomes

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes
- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

STDEV 170 : Introduction to Health Professions. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Overview of health professions: medical, dental, and other specialties. Primary focus on guest lectures from various practitioners and clinicians.

Course Outcomes
- 1. Students will gain a basic understanding of a significant number of health professions.
- 2. Students will increase knowledge of health professions through class presentations with health care professionals.
- 3. Students will learn more about health care provision through service learning in preparation for service-oriented health professions.
- 4. Students will increase awareness of the requirements to enter various health professions and where to find additional information about their preferred health care field.

STDEV 399R : Health Professions Internship. (1-3:Arr:Arr)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Internships with health care providers.

Course Outcomes
- Students will gain valuable experience by shadowing and working with current health professionals.
- Students will improve their ability to converse with health care professionals.
- Students will learn about different healthcare practices.
- Students will develop meaningful professional relationships with their internship providers.

Note: Watch prerequisites for the elective courses.

Note to Premed Students: Professional schools and graduate programs may require additional courses not required for this major. Contact the programs to which you may apply to determine specific courses that meet their entrance requirements. Students considering professional or graduate degrees should take at least two semesters of mathematical courses. The following required or elective courses are strongly recommended for students considering professional or graduate degrees in the exercise sciences: MMBio 241; PDBio 360, 362, 363; Chem 351, 352, 353, 481; Math 119; Stat 221. For more information contact the Preprofessional Advisement Center, 3328 WSC, (801) 422-3044. Contact potential schools of choice for a complete list of entrance requirements.

*Hours include courses that may fulfill university core requirements.

EXSC 302 : Philosophical and Ethical Issues in Exercise Sciences. (1:1:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Philosophical and ethical issues common to exercise sciences majors. Concept of mind, body, spirit.

Course Outcomes

- Learn contemporary tenets of philosophy that will serve as a basis for understanding important ideas in our own cultural tradition as well as that of others.
- Comprehend philosophical worldviews to facilitate respectful relationships with others.
- Pursue truth, think clearly and communicate effectively one's own beliefs and values; deepen one's understanding of the nature of being.
- Comprehend and apply the truths of the gospel of Jesus Christ. Reflect devout love of God and a loving, genuine concern for the welfare of others in the learning environment.
- Acquire/reinforce a profound respect for the divine nature of one's own life, a reverence for one's value, the purpose of one's life and a desire to live a healthy lifestyle.
- Articulate one's valuing of the entire self, bodymindspirit, with particular focus on the meaning and importance of the physical body.
- Strengthen the formulation of own personal and professional philosophy establishing clear standards of integrity. Improve the communication of one's beliefs, written and verbal.
- Analyze contemporary issues from an ethical standpoint. Demonstrate own professional ethical behavior, think critically and take an informed position on an issue.

EXSC 320 : Basic Athletic Training. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 220; Some majors require concurrent enrollment in ExSc 321. Check MAP requirements for major.

DESCRIPTION: Recognition, evaluation, and care of athletic injuries. Techniques in taping, preventing, and rehabilitating injuries.

Course Outcomes

- Review general responsibilities, roles, and tasks of athletic trainers, physical therapists, and otherallied health professionals involved in sports medicine.
- Learn assessment, first aid, and treatments for common musculoskeletal injuries.
- Examine methods of injury prevention including conditioning principles, environmental hazards,and protective equipment.
- Learn and utilize resources available to sports medicine professionals.
- Apply knowledge to practical situations.

EXSC 321 : Basic Athletic Training Lab. (.5:0:.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Concurrent enrollment in ExSc 320.

NOTE: Fee.

Course Outcomes

- Demonstrate competency and proficiency in taping the ankle, foot, lower leg, knee, thigh/hip,shoulder, elbow, wrist, thumb, and finger joints.
- Demonstrate competency and proficiency in wrapping the ankle, foot, lower leg, thigh/hip,shoulder, elbow, wrist, thumb, and finger joints.
- Demonstrate competency and profiency in wound care management.
- Demonstrate competency and profiency in injury evaluation.
- Demonstrate competency and profiency in injury treatment management.
- Demonstrate competency and profiency in spineboarding and splinting.

EXSC 349 : Body, Mind, Spirit. (3:3:0)

OFFERED: Independent Study only. Honors also.

DESCRIPTION: Sacredness of the body and its meaningfulness to the whole being. Comparative approach utilizing ideas from the restored gospel and Western and Eastern philosophy (nature of being).

Course Outcomes

There are no course outcomes available

: Honors Body, Mind, Spirit.

Course Outcomes

EXSC 362 : Kinesiology and Biomechanics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Math 110 or higher.

RECOMMENDED: Phscs 105 or 121; PDBio 220.

Course Outcomes

- Demonstrate application of physical laws to human performance.
- Calculate kinematics of human motion.
- Show comprehension of projectile motion equations.
- Determine changes of motion due to forces.
- Demonstrate understanding of how fluids generate force.

EXSC 365 : Scientific Bases of Sport: Kinesiology. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Kinesiology and biomechanics for physical education/coaching minor.

Course Outcomes

- Students will demonstrate how to apply physical laws to human performance. Included physical laws deal with: Linear motion, projectile motion, forces, impulse and momentum, fluid mechanics, and tissue mechanics.

EXSC 366 : Scientific Bases of Sport: Exercise Physiology. (2.5:2:0)

WHEN TAUGHT: Fall; Winter

RECOMMENDED: PDBio 305.

DESCRIPTION: Physiology of activity for physical education teaching students.

Course Outcomes

There are no course outcomes available

EXSC 385 : Personal Training Strategies. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: The art and science of personal fitness training for healthy adults, utilizing safe and effective techniques to develop and maintain optimal functional fitness (proper posture, balance, joint mobility, and stability), and optimal physical fitness (cardiorespiratory endurance, flexibility, muscular strength, and power).

Course Outcomes

- Explain and apply the essential concepts and principles of human movement science, anatomy, exercise physiology; biomechanics, motor learning; functional fitness assessment; stability training, mobility training, core training, balance training, reactive training, resistance training, cardiorespiratory training; exercise programming; nutrition and weight management; safety and injury prevention in an understandable and accurate way
- Prepare to certify as a Certified Personal Trainer (CPT) through the National Academy of Sports Medicine (NASM)

EXSC 387 : Lifestyle and Chronic Disease Prevention. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Current scientific evidence demonstrating how lifestyle affects disease processes. Healthy lifestyle concepts specifically needed by wellness professionals, health educators, and health promotion practitioners; influence of unhealthy lifestyle as basis for chronic diseases, i.e., cardiovascular disease, cancer, and diabetes.

Course Outcomes

- Develop an awareness of what constitutes a healthy lifestyle
- Understand the use and interpretation of statistical techniques used in scientific papers on health and lifestyle
- Become familiar with the scientific literature that supports healthy living
- Gain knowledge needed to help others adopt and maintain a healthy lifestyle

EXSC 390 : Advanced Musculoskeletal Human Anatomy (includes lab). (4:3:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 220; Majors Only

RECOMMENDED: ExSc 362 or equivalent.

DESCRIPTION: Advanced examination of structure and function of skeletal, articular, muscular, and peripheral nervous systems with clinical applications; cadaver lab included.

Course Outcomes

- Upon completion of this class students will be able to accomplish the following:Be familiar with the anatomical terms and their meanings for the human skeletal, peripheral nervous, articular, and muscular systems in relation to movement and orthopaedics.
- Identify and discuss the structures, functions and inter-relationships of the human skeletal, peripheral nervous, articular, and muscular systems with respect to movement.

EXSC 394 : Athletic Training Clinical Education 1. (2:1:5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Athletic training major status.

DESCRIPTION: Classroom and field experience. Orientation to athletic training program and clinical expectations. Modules include emergency care, taping skills, and basic modalities.

Course Outcomes

- After completing this course, the student will be able to understand the administrative roles and policies of various health care organizations including:a. CAATEb. NATAc. BOC
- Demonstrate the skills necessary for accurate record keeping including SOAP notes and correct documentation of HOPS
- Understand purchasing policies for supplies
- Correctly devise and implement emergency action plans
- Demonstrate the necessary skills for care of emergency conditions
- Demonstrate care and necessary skills for treating open wounds
- 1. Demonstrate correct use, including indications and contraindications for therapeutic modalities including:a. Hot Packsb. Ultrasoundc. Cryotherapyd. Electrical stimulation
- 1. Demonstrate correct evaluation techniques of lower extremities including:a. Footb. Anklec. Lower Legd. Kneee. Hip

EXSC 395 : Athletic Training Clinical Education 2. (2:1:5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 394

DESCRIPTION: Classroom and field experience. Modules include taping skills, assessment, and modalities.

Course Outcomes

- Demonstrate rehabilitation skills, including aquatic therapy, joint mobilizations, proprioception, neuromuscular control, and agility exercises.
- Demonstrate competency and clinical proficiency in taping and bracing.
- Demonstrate the skills necessary to properly evaluate and care for upper extremity injuries including shoulder, elbow, forearm, wrist, hand, head and face, and thorax and abdomen.
- Demonstrate the use of the following rehabilitation tools: Alter G machine and Rebounder

EXSC 399R : Exercise and Wellness Internship. (.5-9:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Internship coordinator's consent.

DESCRIPTION: On-the-job experience for exercise and wellness majors.

Course Outcomes

- Gain work-related experience through one or more internship experiences
- Apply, in a work-related setting, the skills and abilities attained through required course work in the Exercise and Wellness major

400-Level Courses

EXSC 410 : Stress Management. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Practical experience in learning to understand and manage stress.

Course Outcomes

- Master the basic understanding of the physiological mechanisms responsible for the fight-or-flight response and subsequent manifestations of various symptoms of target organ dysfunctions. Be able to apply this understanding to stress management and disease prevention.
- Understand and discuss the holistic nature (mind-body-spirit) of stress management and comprehend the mind-body connection of the stress and disease process.
- Be able to recognize potential stressors and develop strategies to prevent (or reduce the magnitude) these stressors from eliciting a stress response.
- Be able to develop strategies to reduce daily stressors.
- Understand the principles behind the various relaxation techniques and be able to apply these techniques to managing stress.

EXSC 414 : Advanced Athletic Training Lab. (1:0:2)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Athletic training major status.

DESCRIPTION: Advanced athletic training skills, including taping, bracing and splinting, custom-fitted equipment, massage and stretching techniques, and emergency splinting and transport.

Course Outcomes

- At the end of this course, the student will demonstrate competency in each of the following CAATE competencies:Select and fit appropriate standard protective equipment on the patient for safe participation in sport and/or physical activity. This includes but is not limited to: Shoulder Pads, Helmet/Headgear, Footwear, Mouthguard, Prophylactic Knee Brace, Prophylactic Ankle Brace, Other Equipment (as appropriate)
- Select, fabricate, and apply appropriate preventive taping and wrapping procedures, splints, braces, and other special protective devices. Procedures and devices should be consistent with sound anatomical and biomechanical principles.
- Obtain, interpret, and make decisions regarding environmental data. This includes, but is not limited to the ability to:RM-P6.2. Formulate and implement a comprehensive, proactive emergency action plan specific to lightening safety
- Apply commonly used special tests and instruments (e.g., otoscope, stethoscope, ophthalmoscope, peak flowmeter, chemical “dipsticks” [or similar devices]) and document the results for the assessment of: Vital signs including respiration (including asthma), pulse and circulation, and blood pressure
- Implement appropriate emergency treatment strategies, including but not limited to:AC-P3c Establish and maintain an airway in a patient wearing shoulder pads, headgear or other protective equipment and/or with a

suspected spine injury
- Instruct the patient in proper techniques of commonly prescribed therapeutic exercises.
- Develop risk management plans, including facility design, for safe and efficient health care facilities.
- Develop a risk management plan that addresses issues of liability reduction; security, fire, and facility hazards; electrical and equipment safety; and emergency preparedness.
- Develop policy and write procedures to guide the intended operation of athletic training services within a health care facility.

EXSC 415 : Therapeutic Modalities. (3:2:2)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Athletic training major status.

DESCRIPTION: Hydrotherapy, massage, traction, radiant energy, heat, cold, and electrotherapy.

Course Outcomes

- The student will demonstratethe ability to properly select the appropriateparameters, prepare, and apply a(n):a.cold whirlpool treatmentb.controlled cold therapy unitc.ice bagd.vapo-coolant spraye.ice immersionf.ice massageg.contrast bathh.cryokinetics
- The student will demonstratethe ability to properly select appropriateparameters, prepare, and apply a(n):a.moist heat packb.paraffin treatmentc.warm whirlpool treatmentd.fluidotherapye.diathermyf.infrared
- The student will demonstratethe ability to properly select appropriateparameters, prepare, and apply a(n):a.sensory-level pain control treatmentb.noxious-level pain control treatmentc.motor-level pain control treatmentd.muscle re-education treatmente.muscle pumping treatmentf.acute edema treatmentg.chronic edema treatmenth.muscle spasm treatmenti.muscle splinting treatmentj.muscle atrophy retardation treatmentk.iontophoresis treatmentl.MENS treatment
- The student will demonstrate proficiency in thesetup and application of the following types ofelectrical stimulation units:a.Monophasic stimulator (e.g., high voltstimulation)b.Biphasic stimulator (e.g., TENS, NMES)c.Direct current (e.g., iontophoresis)d.Alternating current (e.g., interferential,NMES)
- The student will demonstrate theability to properly select appropriateparameters, prepare, and apply a:a.thermal direct/indirect ultrasound treatmentb.non-thermal direct/indirect ultrasoundtreatmentc.combination electric-stimulation/ultrasoundtreatmentd.phonophoresis treatment
- The student will demonstrate theability to properly select appropriateparameters, prepare, and apply:a.mechanical tractionb.manual tractionc.positional traction
- The student willdemonstrate the ability to properly selectappropriate parameters, prepare, and applyintermittent compression.
- The student will demonstrate theability to prepare and apply a massagetreatment.The student will demonstrate the ability toproperly perform massage strokes.a.effleurageb.petrissagec.frictiond.tapotemente.vibration

EXSC 416 : Injury Evaluation: Lower Extremities. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Athletic training major status.

DESCRIPTION: Basic principles of injury evaluation; evaluation techniques specific to lower-extremity injuries.

Course Outcomes

- Instruct the patient how to properly perform fitness tests to assess his or her physical status and readiness for physical activity. Interpret the results of these tests according to requirements established by appropriate governing agencies and/or a physician. These tests should assess: Muscular Endurance, Agility, Speed.
- Develop a fitness program appropriate to the patient's needs and selected activity or activities that meet the requirements established by the appropriate governing agency and/or physician for enhancing: Cardiovascular Endurance, Speed
- Perform inspection/observation of the clinical signs associated with common injuries including deformity, posturing and guarding, edema/swelling, hemarthrosis, and discoloration.Palpate the bones and soft tissues to determine normal or pathological characteristics.Measure the active and passive joint range of motion using commonly accepted techniques, including the use of a goniometer and inclinometer.Grade the resisted joint range of motion/manual muscle testing and break tests.Apply appropriate stress tests for ligamentous or capsular stability, soft tissue and muscle, and fractures.Apply appropriate special tests for injuries to the specific areas of the body as listed above.Assess neurological status, including cranial nerve function, myotomes, dermatomes and reflexes, and circulatory status. Document the results of the assessment including the diagnosis.
- Obtain a medical history of the patient that includes a previous history and a history of the present condition. Perform a visual observation of the clinical signs associated with common injuries and/or illnesses including deformity, edema/swelling, discoloration, and skin abnormalities.Palpate the bones and soft tissues, including the abdomen, to determine normal or pathological characteristics.

EXSC 417 : Injury Evaluation: Upper Extremities and Trunk. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 416

DESCRIPTION: Injury evaluation techniques specific to the upper extremities and trunk.

Course Outcomes

- Upon completion of this course, the student will understand and be able to explain and/ordemonstrate by performance on an exam:1. Mechanisms of common injuries in various sports.
- Basic principles of evaluation and diagnostic terminology.
- Signs and symptoms of upper extremity injuries.
- Specific steps in injury evaluation.
- Evaluation techniques, including special tests, used to identify and assess degree ofdisability of the upper extremity.
- Proficiency in performing manual muscle testing of the upper extremity.
- Proficiency in performing girth and goniometric measurements of the upperextremity.
- Basic on-the-field/off-the-field injury management.

EXSC 418 : Rehabilitation of Orthopedic Injuries. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 415

DESCRIPTION: Basic principles, techniques, and progression of orthopedic/musculoskeletal rehabilitation.

Course Outcomes

- 1. Understand tissue healing and how therapeutic exercise affects tissue healing.
- 2. Understand the concept of functional progression and how it guides individual rehabilitation protocols. Rehabilitation is not a recipe that fits all people.
- 3. Apply and understand therapeutic exercise, range of motion, and manual therapy techniques to enhance the goals within a rehabilitation plan for athletic injury.
- 4. Synthesize the different goals of rehabilitation to be combined for any injury and condition to return the patient to full activity.

EXSC 419 : Medical Issues in Athletic Training. (1:1:0)

WHEN TAUGHT: Winter

PREREQUISITE: ExSc 417 or concurrent enrollment.

DESCRIPTION: Discussion of current medical issues in athletic training with guest lectures by medical specialists.

Course Outcomes

- Advanced seminar type class for exposure to a variety of medical conditions, given from MD's point of view.
- Learn a medical doctor's approach to illnesses which athletes commonly experience.
- Integrate the athletic trainer's responsibility as it pertains to a team approach with the physician.

EXSC 423 : Administration of Athletic Training Programs. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 415

DESCRIPTION: Management and administration of athletic training facilities and staff members.

Course Outcomes

- Explain the importance of planning, coordinating, and supervising in the administration of an athletic training room/program.
- Explain various budgeting systems and develop budgets for high school and collegiate athletic training programs.
- Design athletic training facilities to meet specific needs.
- Explain the significance of state regulation for the athletic training profession and its relationship to 3rd party reimbursement.
- Explain the impact that insurance and 3rd party reimbursement has on athletic training.
- Be able to develop emergency plans for athletic training settings.
- Explain the elements of negligence and to understand legal issues facing athletic trainers, as well as the role of risk management.
- Explain how to efficiently and effectively organize pre-participation exams.
- Explain key concepts in personnel management, including communication, motivation, evaluations, etc.
- Explain the role of technology and information management in athletic training settings.
- Develop and incorporate individual leadership skills; as well as increase personal awareness, gain self-confidence, and foster cohesive and caring relationships.

EXSC 455 : Worksite Health Promotion. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 387 & EXSC 463

DESCRIPTION: Managing, designing, marketing, implementing, assessing, and administering health promotion programs in a worksite setting.

Course Outcomes

- Be able to demonstrate an understanding of the health promotion concept, historical background of worksite health promotion programs, and the rationale for companies to provide a health promotion program. This objective will be accomplished through class lecture/discussion and students will be evaluated through quizzes and exams.
- Better understand each of the following components in the design and execution of a worksite health promotion program: determining needs and interests of employers and employees, writing vision/mission/goal statements best practices, creating a company culture of wellness, launching a program, incentives/rewards, and company wellness policies. This will be accomplished through lectures and a semester project.
- Increase their understanding of effective health assessments and how to interpret the assessments. This will be accomplished through lectures and evaluated through quizzes and exams.
- Increase their understanding of how to effectively evaluate programs. This will be accomplished through lectures and evaluated through quizzes and exams.
- Be able to demonstrate the essential elements of common worksite health promotion programs, such as, physical activity, nutrition, weight management, medical self-care, stress management, substance abuse/tobacco control, and back care programs. This will be accomplished through lectures and class presentations.
- Gain practical experience and learning from experts in the field. This will be accomplished through the following: 1) each student will critique an existing worksite wellness program and present their findings to the class, 2) approximately 5 class periods will be devoted to studying transcripts of various interviews with experts in the field, and 3) 5 class periods will include visiting lecturers who are currently working in the field.
- Develop a worksite health promotion program through a semester class project.
- Have the opportunity to work in conjunction with a team to develop a health display to be presented to the class.

EXSC 460 : Orthopaedic Impairments and Therapeutic Exercise. (3:3:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 220 & EXSC 390

DESCRIPTION: Fundamentals of body mechanics and therapeutic exercise, coupled with kinesiological principles for detection and correction of basic neuromusculoskeletal anomalies.

Course Outcomes

- Upon completion of this class students will be able to accomplish the following:Demonstrate an understanding

of basic orthopedic terminology dealing with posture, movement and pathology.
- Demonstrate an understanding of traditional, osteokinematic and arthrokinematic movement
- Demonstrate an understanding of therapeutic exercise particularly active-resistive exercise and manual muscle testing and manual passive exercise and stretching.
- Be able to perform a postural evaluation, both grossly and at individual joints
- Demonstrate an understanding of the etiology, clinical significance and treatment of congenital and acquired orthopedic impairments of the upper and lower extremities and trunk.
- Where applicable, be able to write a therapeutic exercise program for the orthopedic impairments discussed in class.
- Demonstrate an understanding of normal and pathologic gait.

EXSC 463 : Exercise Physiology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: PDBIO 305; or PDBIO 362

RECOMMENDED: Concurrent enrollment in ExSc 464.

DESCRIPTION: The function of the physiological systems and their responses to acute and chronic exercise.

Course Outcomes
- Describe the substrates used, amount and rate of ATP resynthesized, metabolic end products, and control of anaerobic and aerobic metabolic pathways.
- Describe the responses to acute bouts of exercise and the mechanisms of the observed response, and the physiological adaptations which occur as a result of physical conditioning.
- Describe the physiological rationale for applying the eight principles of physical conditioning to improve health, fitness, and performance.
- Describe the depolarization of skeletal muscle beginning at the spinal cord and ending with the contraction of the muscle fiber.
- Describe the transportation and diffusion of O2and CO2 through the pulmonary and systemic circuits at rest and during exercise.
- Describe the anatomical, physiological, and functional differences between the three types of huma skeletal muscle fibers.
- Describe the interaction of the nervous, muscle, cardiovascular, pulmonary, and metabolic systems at rest and during exercise.
- Describe the normal anatomy and physiology of the heart, blood, and blood vessels; describe the normal function of the cardiovascular system at rest and during exercise.
- Describe how the human body functions and maintain homeostasis during the increased metabolic demands of exercise.
- Describe the function of sympathetic, parasympathetic, and somatic motor neurons, including differences in structure, neurotransmitters, receptors and efferent organs.

EXSC 464 : Exercise Physiology Lab. (.5:0:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: ExSc 463 or concurrent enrollment.

DESCRIPTION: Introduction of laboratory and field methods; applying principles of exercise physiology to assessing physical fitness and physiological responses to exercise.

Course Outcomes
- The purpose of this class is to apply knowledge of exercise physiology to the assessment of the fivecomponents of health related physical fitness. The labs are the means to review and apply the physiologyof exercise and to develop and practice fundamental skills related to the assessment of physical fitness.

EXSC 468 : Problems in Exercise Prescription. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 463

DESCRIPTION: Applying scientific principles to problems in conditioning.

Course Outcomes
- At the conclusion of the course, the student will be able to write prescriptions of activity forindividuals of selected levels of age and fitness for the following:A. Endurance1. Speed/Explosive endurance2. Anaerobic endurance3. Aerobic endurance B. Strength1. Beginners2. Athletes3. Body builders C. Nutrition D. Weight Control1. Weight loss2. Weight gain E. Flexibility F. Plyometricssion of the course, the student will be able to write prescriptions of activity forindividuals of selected levels of age and fitness for the followingAt the conclusion of the course, the student will be able to write prescriptions of activity forindividuals of selected levels of age and fitness for the following

EXSC 470 : Functional Neuroanatomy. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PDBIO 220 & EXSC 390

DESCRIPTION: Function, assessment, and rehabilitation of sensory and motor systems.

Course Outcomes
- 1. Describe the functional unit of the nervous system?2. Describe the pathways of three different messenging neurons.3. Explain glia?4. List the 4 regions of the nervous system.5. List the structures make-up the brain stem?6. Identify and label the circle of willis and associated arterial supply7. Explain the composition of white vs. gray matter.8. Describe and identify spinal cord anatomy and explain the DRG (dorsal root ganglion) and ventral rami?9. Describe and draw the gray and white matter in the spinal cord.10. List and identify the cranial nerves attach to the Pons?11. List and identify all cranial nerves and explain which are sensory, motor or mixed. 12. Describe the function of the cerebellum. (see syllabus for expanded list)
- Upon completion of this class students will be able to accomplish the following:Be familiar with the neuroanatomical terms and their meanings for the central nervous system and peripheral nervous system in relation to systems and function.Be familiar with terminology of specific diseases and dysfunctions in relation to signs/symptoms and classic descriptionsBe familiar with the terminology of electrophysiologic testing of the peripheral nervous system as it relates to normal and abnormal function.
- Students will be able to identify and discuss the structures, pathways and functions of independent

somatosensory and motor tracts as they relate to motor function, coordination, movement and sensory integration.

EXSC 480 : Obesity and Weight Management. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ExSc 463 or concurrent enrollment.

DESCRIPTION: Review of the scientific literature surrounding obesity and weight management, primarily the causes and consequences of this growing epidemic.

Course Outcomes

- Demonstrate an understanding of the historical framework and prevalence of overweight/obesity in adults and children.
- Understand the etiology and health risks related to overweight/obesity.
- Describe the economic costs and social consequences associated with overweight/obesity.
- Demonstrate an understanding of the principles of energy balance.
- Understand methods of assessing overweight/obesity, body composition, diet, and physical activity.
- Demonstrate an understanding of various methods of treating overweight/obesity including: diet, physical activity, behavioral, pharmacological, and surgical interventions.
- Demonstrate an understanding of pediatric, family and public interventions to prevent or attenuate the rise in obesity.
- Have a personal experience applying weight management strategies.
- These learning objectives will be achieved through class lectures, student projects, scientific readings, and in-class activities. Students will be evaluated through written exams, quizzes and projects.

EXSC 485 : Exercise and Wellness Certification Preparation. (3:3:0)

PREREQUISITE: Senior status.

DESCRIPTION: Review of exercise and wellness certification competencies and curriculum with preparation for professional certification.

Course Outcomes

- Explain and apply the essential concepts and principles of pathophysiology; exercise physiology; health appraisal and fitness testing; exercise programming; nutrition and weight management; anatomy and biomechanics; human behavior and psychology; human development and aging; and safety and injury prevention in an understandable and accurate way
- Prepare to certify as a Health and Fitness Specialist (HFS) through the American College of Sports Medicine (ACSM)

EXSC 494 : Athletic Training Clinical Education 3. (2:1:5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 395

DESCRIPTION: Classroom and field experience. Modules include injury assessment and management, rehabilitation skills, and knowledge of general medical conditions.

Course Outcomes

- After completing this course, the student will be able to:1. Understand and apply administrative policies and procedures.
- Demonstrate general medical assessment skills.
- Understand how to care for and prevent various general medical (respiratory, cardiac,gastric, genitourinary) pathologies.

EXSC 495 : Athletic Training Clinical Education 4. (2:1:5)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: EXSC 494

DESCRIPTION: Classroom and field experience. Modules include injury assessment and management, rehabilitation skills, nutrition, and dermatology.

Course Outcomes

- After completing this course, the student will:1. Demonstrate understanding of pharmacology, pharmacological processes, and the university'smedication policies and procedures.
- Demonstrate knowledge of basic nutrition guidelines for athletes.
- Demonstrate knowledge of eating disorders and disordered eating and possess the ability tointervene with athletes who suffer from such disorders.
- Demonstrate the skills necessary to properly evaluate, care for, rehabilitate, and prevent upper and lower extremity injuries.
- Demonstrate the skills necessary to properly evaluate, care for, and prevent various generalmedical (common syndromes and diseases, dermatology) pathologies. Full evaluation and treatment from on-the-field to return-to-play.

EXSC 496R : Academic Internship: Practicum. (.5-8:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ExSc 320 and instructor's consent.

DESCRIPTION: Academic and practical application of skills for athletic trainers.

Course Outcomes

There are no course outcomes available

: Athletic Training Internship.

Course Outcomes

EXSC 497R : Undergraduate Research and Study. (.5-4:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Individual research and study in any area of exercise science.

Course Outcomes

- To provide the undergraduate student with a mentored learning experience specifically in exercise science related research

EXSC 498 : Capstone Experience in Athletic Training. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Senior standing in athletic training education program.

DESCRIPTION: Synthesizing and integrating student classroom and clinical experiences in preparation for BOC examination resulting in certification of allied health professionals.

NOTE: Course should be taken last semester prior to graduation.

Course Outcomes

- Explain, describe and complete the BOC exam registration process.
- Design and follow athletic training content exam preparation schedule.
- Understand the possibilities of practice in AT.
- Explain the significance of BOC certification and state regulation for the athletic training profession.
- Define deficiencies in you athletic training education knowledge and skills.
- Develop and implement emergency plans in the practice of athletic training.
- Explain legal issues facing athletic trainers.
- Explain the role of technology and information management in athletic training settings.
- Understand the requirements to maintain BOC certification.
- BOC Exam Preparation= Professional Practice Preparation
- Have completed all NATA Education Council competencies.

500-Level Graduate Courses (available to advanced undergraduates)

EXSC 501 : Sports Medicine Pathology and Pharmacology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ExSc 320, PDBio 305; or equivalents.

DESCRIPTION: Sports medicine pathologies and related pharmacology for a variety of sports medicine/allied health care professions.

NOTE: Meets required NATA athletic training educational competencies.

Course Outcomes

- After completing this course, the student will:1. Synthesize basic knowledge of human anatomy and physiology to develop knowledge of the causes, pathophysiology, and clinical features of the various conditions affecting the body. Considering you have completed a physiology course you will be required to recall that information
- 6. Understand basic pharmacokinetics and pharmacodynamics principles.
- 8. Describe proper maintenance and documentation of records for the administration of prescription and nonprescription drugs.
- 7. Understand advantages and disadvantages of common routes used to administer medications.
- 2. Analyze relationships between inflammation, repair, regeneration, and healing as they relate to pharmacological intervention.
- 9. Utilize reference sources for pharmacological information.
- 5. Synthesize patient information for prescription and nonprescription agents associated with the treatment and relief of symptoms from illness and injuries.
- 4. Understand clinical use of various prescription and nonprescription agents associated with the treatment and relief of symptoms from illnesses and injuries.
- 3. Evaluate clinico-pathological signs and symptoms for specific medical conditions that assist the sport medicine/allied health care clinician in correlating findings in determining the course of action for illness and disease.
- 11. Identify sources of current banned-drug lists published by various associations.
- 10. Describe basic concepts of organizing and coordinating a drug testing and screening program.

EXSC 560 : Orthopaedic Pathomechanics. (2:2:1)

WHEN TAUGHT: Fall

PREREQUISITE: ExSc 460 or equivalent.

DESCRIPTION: Advanced analysis of neuromusculoskeletal deformities and/or injury. Therapeutic exercise and the use of orthoses.

Course Outcomes

- Students will be able to describe the anatomy and movement mechanics of selected joints for class
- Students will be able to demonstrate orthopedic evaluative techniques to evaluate dysfunctional mechanics
- Students will be able to evaluate each each selected joint for pathologic mechanics and movement dysfunction
- Students will be able to differentiate the anatomical structures relating to joint dysfunction through use of specialized manual tests

Graduate Courses

For 600- and 700-level courses, see the BYU 2013–2014 Graduate Catalog.

Admission to Degree Program

All degree programs in the Department of Health Science are open enrollment. In addition, special limitations apply for teaching majors.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

Undergraduate Programs and Degrees

BS in Public Health
Environmental/Occupational Health Emphasis (Program Outcomes)
Epidemiology Emphasis (Program Outcomes)
Health Promotion Emphasis (Program Outcomes)
Health Science Emphasis (Program Outcomes)
BS in School Health Education (Program Outcomes)

Minor in Health Education

Students should see their college advisement center for help or information concerning the undergraduate programs.

The Discipline

Public health professionals work to create conditions that ensure the health and safety of individuals, families, and communities. Public health students are trained to inform, educate, and empower people about health issues; mobilize communities to take ownership for their own health; monitor health status and diagnose and investigate health problems and health hazards; develop policies and laws to protect health and ensure safety; and link people to needed health services. The public health mission is carried out through organized, interdisciplinary efforts that address the physical, mental, and environmental health concerns of communities and populations at risk for disease and injury.

Four of several disciplines within public health are represented as emphases within the major: (1) environmental/occupational health identifies and controls factors in the environment (air, water, food, toxins, etc.) or conditions at the workplace which affect health; (2) epidemiology investigates and discovers what causes disease and disability and how diseases are spread or distributed across populations; (3) health promotion facilitates behavior change among individuals and improves population health through policy, advocacy, education, and communication; and (4) health science trains students interested in working in public health after earning an advanced degree in a medical, dental, or other allied health area.

Career Opportunities

There has never been a better time to pursue a career in public health. It is an exciting and growing field of study and a diverse and dynamic profession. It is filled with rewards associated with the pursuit of serving others. The development and delivery of population-based prevention programs will be the key to major advances in health improvement in the 21st century. Public health will continue to be called upon to monitor and assess health problems, prevent and control diseases and injuries, and protect the health of communities and worksites from various environmental and occupational risks associated with man-made and natural disasters and emergencies.

Public health graduates are qualified to work in governmental health agencies on the local, state, federal, and international levels. Private-sector employment can be found in a variety of businesses, community health agencies, managed care organizations, hospitals, clinics, research institutes, voluntary health agencies, and non-governmental organizations. Opportunities for employment in public health are readily available, however recruiters will not typically come to campus to hire graduates. This means graduates must be organized and proactive in their career planning. Students can increase the likelihood of obtaining a position by balancing classroom activities with voluntary or paid service to public health agencies. Obtaining certifications related to specific tracks within the major and careful development of a professional portfolio enhance employment opportunities.

While there are many specialties or disciplines in public health, most career opportunities are found within the fields represented by the emphases in the major. Entry-level salaries with a bachelor's degree in public health will range from approximately $35,000–$60,000 but will vary significantly depending upon the specific discipline, type of organization, and geographic location.

Program Requirements | View MAP | View Program Outcomes

1. Complete the following courses:

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

Course Outcomes

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

Course Outcomes

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

HLTH 100 : Introduction to Public Health. (1:1:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Introduction to public health professions including exploration of current issues, job opportunities, the essential public health services, and an overview of the public health major.

Course Outcomes

- 1. Identify key events in the history of public health that have shaped the current state of the profession
- 2. Describe core public health values
- 3. Identify the ten essential public health services and describe which aspects of the profession hold the most relevance for employment and personal fulfillment
- 4. Delineate how health is defined and measured as well as recognize the impact of social, environmental, and behavioral determinants of health
- 5. Describe the importance of global health and recognize how actions in the US impact the rest of the world and vice versa
- 6. Identify the critical roles and contributions of epidemiology, environmental/occupational health, health promotion, medicine, and allied health within the public health profession
- 7. Determine their interest in the public health degree and identify the types of professional and educational opportunities available to them within public health

HLTH 310 : Chronic Diseases: Prevention and Control. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Pathogenesis, epidemiology of major chronic diseases, health costs to society, at-risk populations, population-based prevention, and related best-practice interventions.

Course Outcomes

There are no course outcomes available

HLTH 311 : Infectious Diseases: Prevention and Control. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Human infectious disease risk factors; bacterial, viral, and parasitic agents; pathology, diagnosis, treatment, prevention, and control; communicable, vector-borne, zoonotic, and bioterror diseases of public health.

Course Outcomes

There are no course outcomes available

HLTH 322 : Environmental Health. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: Hlth 100.

DESCRIPTION: Environmental factors as determinants of human health: ecosystem and population dynamics; biological, chemical, and physical hazards; risk assessment; economic, political, cultural, and genetic factors.

Course Outcomes

- Provide a global perspective of environmental issues impacting human health
- Describe the various biological, chemical and physical hazards of the ambient, indoor, and work environment that can adversely affect human health
- Discuss those determinents and factors that affect human health and the health of the environment

- Describe how environmental management practices may contribute to or help control emerging diseases
- Provide an assessment of those national and international health agencies, programs, and other resources that play critical roles in improving human health relative to environmental factors
- Discuss elements of policy making as they influence environmental health issues

HLTH 330 : Principles and Practices of Health Promotion. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: Hlth 100.

DESCRIPTION: Introduction to the health promotion profession, emphasizing current issues, professional preparation and employment, as well as the philosophy and foundations of professional practice in various settings.

Course Outcomes

- Identify professional opportunities available to health education/health promotion specialists in community, school, worksite, and health care settings.
- Identify the roles and responsibilities for health education/health promotion specialists and opportunities for certifications and advanced study.
- Identify organizations, resources, and professional journals associated with health promotion.
- Provide an overview of theories, models, and initiatives used to guide decision-making in the planning and implementation of health promotion programs and health behavior change.
- Demonstrate awareness and sensitivity of the diverse and unique needs of various age group populations and cultural groups for health promotion.
- Identify techniques for enhancing communication in interactions with clients in health promotion settings.
- Propose health promotion solutions to address health problems among various populations.

HLTH 345 : Principles of Epidemiology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: Stat 121.

DESCRIPTION: Applying analytical tools to study acute and chronic disease to facilitate investigation and control of epidemics.

Course Outcomes

- Investigate disease outbreaks.
- Describe basic concepts, definitions, and history of Epidemiology.
- Describe patterns of disease occurrence.
- Interpret Epidemiologic studies.
- Evaluate treatment effectiveness.
- Measure disease frequency and association.
- Distinguish between statistical association and cause-effect relationships.
- Know basic design strategies in Epidemiology.

HLTH 420 : Injury and Violence Prevention. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100

DESCRIPTION: Concepts and interventions related to both unintentional injuries and violence.

Course Outcomes

- Describe the impact of injures on health and on society in terms of mortality, morbidity, disability, and cost.
- Define the terms used in the injury prevention field.
- Describe the models used to analyze injuries and determine interventions.
- Select valid sources of injury prevention information.
- Select and recommend proven and effective injury prevention interventions.

HLTH 422 : Disaster Response and Emergency Preparedness. (3:3:0)

WHEN TAUGHT: Fall; Winter

RECOMMENDED: Hlth 311, 420.

DESCRIPTION: Key elements of public health preparedness and response to the variety of natural, technological, and man-made disasters occurring routinely on a global basis.

Course Outcomes

There are no course outcomes available

HLTH 424 : Occupational Health and Safety. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: HLTH 100 & HLTH 322

DESCRIPTION: In-depth focus on workplace health and safety through a multidisciplinary approach to the anticipation, recognition, evaluation, and prevention and control of workplace-related illnesses and injuries.

Course Outcomes

- Demonstrate competency in using the OSHA standards by identifying specific violations of current standards.
- Describe the purpose and scope of the Occupational Health and Safety Act as well as other relevant safety and health legislation and consensus standards.
- Discuss and demonstrate the elements involved in completing an accident investigation.
- Explain how the functions of management are utilized to assure safe conditions and practices through the development of specific programs as well as an overall safety and health program.
- Identify, evaluate, and develop loss control strategies to address the hazards associated with operating common manufacturing and construction equipment and processes.

HLTH 426 : Fundamentals of Toxicology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent with Hlth 424.

RECOMMENDED: Chem 106, 107.

NOTE: Examines basic concepts of toxicology as they apply to environmental toxicology. Discusses toxicokinetics of foreign chemical agents on biological systems. Focuses on understanding and prevention of mortality and morbidity resulting from environmental exposure to toxic substances.

Course Outcomes

There are no course outcomes available

MATH 110 : College Algebra. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 97 or equivalent (see Independent Study).

DESCRIPTION: Functions, polynomials, theory of equations, exponential and logarithmic functions, matrices, determinants, systems of linear equations, permutations, combinations, binomial theorem.

Course Outcomes

- Graph functions using horizontal and vertical shiftsGraph functions using compressions and stretchesGraph functions using reflections about the x-axis or y-axisForm composite functions and find the domainDetermine the inverse of a function and graph an inverse function from the graph of a function
- This course prepares students to take courses in calculus, statistics, mathematics for elementary education majors, and other areas where algebra skills are required. Fluent skills in algebra are necessary for success in any area that uses mathematical analysis. The mastery of college algebra requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. College Algebra develops the concepts of graphing functions, polynomial and rational functions, exponential and logarithmic functions, conic sections, solving systems of equations, the binomial theorem, permutations, combinations, and probability. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information, visit the Math 110 Wiki page.
- Quadratic functionsPolynomial functionsRational functionsPolynomial and rational inequalitiesThe real zeros of a polynomial functionComplex zeros and the Fundamental Theorem of Algebra
- Exponential functionsLogarithmic functionsProperties of LogarithmsLogarithmic and exponential equationsCompound interestExponential growth and decay
- Graph parabolas, ellipses, and hyperbolasFind the equation of parabolas, ellipses, and hyperbolasDiscuss the equation of conic sections to find vertices, foci, asymptotes, and the directrixWork with conic sections that are not centered at the origin
- Solve systems of linear equations using substitution and eliminationSolve systems of non-linear equations using substitution and eliminationDecompose rational functions using partial fractions
- Find terms in a sequence using a formula and a recursive definitionFind a formula for terms in an arithmetic sequence and be able to add the terms of a finite arithmetic sequenceFind a formula for the terms in a geometric sequence and be able to find the sum of finite and infinite geometric seriesProve statements using mathematical induction
- Work with operations on sets such as union, intersection and complement and count the number of elements in a setCompute permutations and combinationsEvaluate binomial coefficients and expand binomials using the Binomial TheoremCompute probabilities of equally likely outcomes

MMBIO 221 : General Microbiology. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Any biology course.

RECOMMENDED: Any chemistry course.

DESCRIPTION: Microbial world, emphasizing communicable diseases, their causes and control.

NOTE: Recommended for students seeking a liberal education in microbiology who do not have the prerequisites to take the more advanced courses.

Course Outcomes

- Explain and discuss the ways by which microbiologists study microorganisms.
- Discuss the principle infectious diseases that affect mankind, including how they are transmitted, treated, controlled and prevented.
- Differentiate between the types of microorganisms by identifying relevant structure and their function in the biosphere.
- Propose microbial solutions to global problems.
- Describe how the human body defends itself against infectious agents.

MMBIO 222 : General Microbiology Laboratory. (1:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBio 221 or concurrent enrollment.

Course Outcomes

- Use the bright field microscope to view and interpret microbiological specimens
- Use proper aseptic techniques int he handling and transfer of microbiological specimens
- Use standard microbiological media to culture and identify common microbiological specimens
- Use standard microbiology laboratory equipment correctly
- Follow an experimental protocol, collect and organize data, present data in an appropriate form, assess the validity of the data, and draw appropriate comclusions based on the results
- Integrate information and skills gained int eh course to make informed judgements about the role of microorganisms in everyday life
- Use accepted safety protocols when handling microbiological specimens and chemicals

2. Complete 12 hours from the following:

CHEM 223 : Quantitative and Qualitative Analysis. (4:2:6)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: CHEM 107; or CHEM 113

DESCRIPTION: Principles of chemical equilibrium, quantitative chemical measurements, and qualitative detection of selected chemical species.

NOTE: Primarily for majors in molecular biology and the life sciences.

Course Outcomes

- Course Objectives: The course is designed to develop research skills. The labwork will have a somewhat bioanalytical focus, e.g. the chemical analysis of biological molecules or biologically related ions and the use of biomolecules in assays. We will work to develop good laboratory practice, both conceptually and practically, and consider how to do good science. The combined lecture/lab approach will be used to help you understand quantitative approaches to analysis, sources of error, and the utility but also limitations of laboratory measurements. You will be asked to apply a portion of this knowledge to your own laboratory determinations. We will also discuss more advanced analytical methods involving chemical separations and instrumental analyses. This course fills one of the requirements for a minor in chemistry.

CHEM 285 : Introductory Bio-organic Chemistry. (4:4:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

DESCRIPTION: Principles of organic chemistry and biochemistry relating to biomolecule structure and function.

Course Outcomes

- Students will understand the metabolism of carbohydrates, lipids, and proteins in humans. They will be able to describe in structures and words the metabolism of sugars through the pathways of glycolysis, the citric acid cycle, and the electron transport chain.
- Students will understand the structure and reactivity of organic functional groups, such as alcohols, aldehydes, carboxylic acids, and amides. For example, students will learn that aldehydes and ketones typically undergo addition reactions.
- Students will understand the structure and reactivity of the biomolecules that have those functional groups. For example, students will be able to demonstrate that carbohydrates are aldehydes and ketones that undergo addition reactions to form hemiacetals and polysaccharides with acetal linkages.

GEOG 101 : Global Environment: Understanding Physical Geography. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Physical environment, distribution and interrelationships of climates, landforms, ecosystems and their human significance.

Course Outcomes

There are no course outcomes available

GEOG 212 : Introduction to Geographic Information Systems. (3:2:1)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Concepts in the use of small- and large-scale digital map data, emphasizing landscape interpretation and feature description.

Course Outcomes

- Understand basic spatial concepts and data models that form the foundation of GIS.
- Acquire geospatial data from common sources and manipuate them for a specific application.
- Analyze data using GIS to solve real world problems.
- Describe several applications in which GIS is used to solve geographic problems.
- Design and use maps to explore and communicate geospatial information.

GEOG 303 : Biogeography. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Geog 101.

DESCRIPTION: Broad-scale distribution of plants and animals. Theoretical and practical applications to conservation and effects of global environmental change.

Course Outcomes

- Demonstrate an understanding of basic concepts and processes in biogeography
- Recognize and be able to explain patterns of plant and animal life at many different scales
- Explain how humans have affected the distribution and diversity of plants and animals, and apply concepts to decisions regarding human use of the environment
- Demonstrate a knowledge of prominent professional biogeographers and ecologists and their current research themes
- Plan for future changes in species distributions and diversity as a result of environmental and human-induced pressures

HLTH 496R : Academic Internship. (.5-9:ARR:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: HLTH 439

DESCRIPTION: Senior capstone experience.

Course Outcomes
- Obtain experience, as proctored by an approved internship supervisor, to apply professional competencies in public health as assessed through an internship report and internship supervisor rating

MMBIO 261 : Infection and Immunity. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Principles of infectious organisms (principally bacteria and viruses), the diseases they cause, and the role of host immune responses in health and disease.

Course Outcomes
There are no course outcomes available

MMBIO 417 : Medical Parasitology. (3:2:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Bio 100 or equivalent.

DESCRIPTION: Pathogenesis, diagnosis, and epidemiology of human parasitic diseases. Laboratory included.

Course Outcomes
- Gain familiarity with the medically important parasites. This includes understanding parasite host range as well as pathology and mechanisms of pathogenesis.*Relates to Program Learning Outcome: Exhibit mastery of medical microbiology
- Be able to design experiments, with appropriate controls, to test various hypotheses in parasitology.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Read and critically interpret current scientific literature in the field of parasitology.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Students should gain an understanding of their role and responsibility in alleviating suffering caused by parasitic diseases.*Relates to Program Learning Outcome: Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological principles.

MMBIO 465 : Virology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBio 261 or equivalent.

DESCRIPTION: Basic principles of virology, emphasizing selected molecular aspects of virus life cycles and disease processes.

Course Outcomes
- Be able to answer basic questions about Virology: Why are viruses organized as they are? How do viruses replicate? How do viruses cause disease? What are the interactions between viruses and the host immune system? How to prevent/treat/cure viral infections? How can viruses be used as tools to study biological processes and for gene transfer? How can an understanding of viruses help you in your future career? *Relates to Program Learning Outcome: “Exhibit mastery of four of the principal areas of the discipline”, one of which is Virology.
- Understand experimental tools used to study viruses (these are broadly applicable to molecular biology, cell biology, and microbiology) and be able to develop experiments and interpret data.*Relates to Program Learning Outcomes: “Devise experiments with appropriate hypotheses and controls” and “Interpret experiments from primary scientific literature”
- Write about a current, pressing issue in the field of Virology.*Relates to Program Learning Outcome: “Communicate scientific information”
- Understand how research of viruses “by study and also by faith” can lead to alleviation of human disease and suffering.*Relates to Program Learning Outcome: “Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological processes”

NDFS 361 : Food Microbiology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBIO 221 & MMBIO 222

DESCRIPTION: Pathogenic and spoilage microorganisms in foods and their control. Beneficial microorganisms in food systems. Influence of the food system on growth and survival of microorganisms.

Course Outcomes
- Understand the growth requirements of common food borne pathogens and…Be able to attribute the characteristics of a food borne illness with unknown etiology to the most likely organism. Differentiate which organisms would be likely to grow in a specific food product
- Understand intrinsic and environmental aspects of foods and how they can be modified to affect the growth and metabolism of food borne microorganisms to include spoilage, pathogenic, and beneficial organisms.
- Carry out a series of laboratory experiments aimed at isolating and identifying common food borne microbial pathogens
- Classify spoilage microorganisms according to the food or foods they are most likely to affect based on the intrinsic and environmental characteristics of the food and compare to various storage methods to determine which method would be most appropriate for the given food product
- Design and carry out a laboratory experiment to evaluate the microbial safety of a common food product

PDBIO 305 : Human Physiology (with lab). (4:4:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

RECOMMENDED: A general biology course.

DESCRIPTION: Function of body organ systems.

NOTE: Not acceptable for physiology and developmental biology, biophysics, or neuroscience majors. Designed for students with basic chemistry / no molecular biology. Students with chemistry/molecular biology should take PDBio 362.

Course Outcomes
- Students will demonstrate the proper use of physiology terminology.
- Student will demonstrate a well-integrated and comprehensive understanding of the human body in health and disease.
- Students will use knowledge of cells and organ systems to solve problems related to the function of the human body.
- Students will demonstrate the necessary knowledge and skills in physiology that are required for their majors and future aspirations for graduate and professional school.
- Students will develop and demonstrate in their daily lives a deeper appreciation and respect for the human body.
- Students will demonstrate the knowledge to make informed personal (medical,ethical,and political)decisions regarding physiological concepts.

Prerequisite: Chem 101 or equivalent.

PWS 150 : Environmental Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Conservation and management of natural resources concurrent with increasing socioeconomic and human population demands; factors such as soil, water, and air pollution, resources management, bioremediation, nutrient cycles, and global climate changes

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
- Gain a deep appreciation for the Lord's admonition to Adam and Eve regarding the Earth to dress it and keep it
- Engage others and participate in discussions about major environmental problems, movements, and solutions (e.g., desertification, invasive species, water pollution, green revolution, and renewable energy).
- Understand how “science” is conducted.
- Demonstrate a fundamental knowledge (i.e., scientific literacy) of the environment and current environmental problems facing us locally, regionally, and globally.
- Devise experiments with testable hypotheses based the scientific method—process of making observations and logically integrating those observations into a model of how the world works.
- Foster and promote environmental stewardship within your realm of influence and your community.

Note: If the student chooses to take Hlth 496R, he must first complete Hlth 100, 310, 311, 322, 330, 345, 420, 422, and 424.

Recommended GE Courses:

ENGL 315 : Writing in the Social Sciences. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: First-year writing, junior or senior status.

DESCRIPTION: Writing characteristic of disciplines that inquire into human behavior and institutions; correspondence, proposals, library paper, empirical research, and reviews.

NOTE: Carries GE Advanced Written and Oral Communication credit.

Course Outcomes
- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to specific rhetorical situations.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Successfully complete the library tour, tutorial, and tests (if not completed as part of the first-year writing requirement). Successfully complete a library mini-course taught for their major area and demonstrate the ability to use the library effectively.
- Demonstrate the ability to create, number, and label tables and figures.
- Effectively evaluate and comment on the writing of others to facilitate revision.

Or

ENGL 316 : Technical Communication. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: First-year writing, junior or senior status.

DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.

NOTE: Carries GE Advanced Written and Oral Communication credit.

Course Outcomes

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

*Hours include courses that may fulfill university core requirements.

Hide All Course Descriptions

The Discipline

Public health professionals work to create conditions that ensure the health and safety of individuals, families, and communities. Public health students are trained to inform, educate, and empower people about health issues; mobilize communities to take ownership for their own health; monitor health status and diagnose and investigate health problems and health hazards; develop policies and laws to protect health and ensure safety; and link people to needed health services. The public health mission is carried out through organized, interdisciplinary efforts that address the physical, mental, and environmental health concerns of communities and populations at risk for disease and injury.

Four of several disciplines within public health are represented as emphases within the major: (1) environmental/occupational health identifies and controls factors in the environment (air, water, food, toxins, etc.) or conditions at the workplace which affect health; (2) epidemiology investigates and discovers what causes disease and disability and how diseases are spread or distributed across populations; (3) health promotion facilitates behavior change among individuals and improves population health through policy, advocacy, education, and communication; and (4) health science trains students interested in working in public health after earning an advanced degree in a medical, dental, or other allied health area.

Career Opportunities

There has never been a better time to pursue a career in public health. It is an exciting and growing field of study and a diverse and dynamic profession. It is filled with rewards associated with the pursuit of serving others. The development and delivery of population-based prevention programs will be the key to major advances in health improvement in the 21st century. Public health will continue to be called upon to monitor and assess health problems, prevent and control diseases and injuries, and protect the health of communities and worksites from various environmental and occupational risks associated with man-made and natural disasters and emergencies.

Public health graduates are qualified to work in governmental health agencies on the local, state, federal, and international levels. Private-sector employment can be found in a variety of businesses, community health agencies, managed care organizations, hospitals, clinics, research institutes, voluntary health agencies, and non-governmental organizations. Opportunities for employment in public health are readily available, but recruiters will not typically come to campus to hire graduates. This means graduates must be organized and proactive in their career planning. Students can increase the likelihood of obtaining a position by balancing classroom activities with voluntary or paid service to public health agencies. Obtaining certifications related to specific tracks within the major and careful development of a professional portfolio enhance employment opportunities.

While there are many specialties or disciplines in public health, most career opportunities are found within the fields represented by the emphases in the major. Entry-level salaries with a bachelor's degree in public health will range from approximately $35,000–$60,000 but will vary significantly depending upon the specific discipline, type of organization, and geographic location.

Program Requirements | View MAP | View Program Outcomes

1. Complete the following courses:

HLTH 100 : Introduction to Public Health. (1:1:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Introduction to public health professions including exploration of current issues, job opportunities, the essential public health services, and an overview of the public health major.

Course Outcomes
- 1. Identify key events in the history of public health that have shaped the current state of the profession
- 2. Describe core public health values
- 3. Identify the ten essential public health services and describe which aspects of the profession hold the most relevance for employment and personal fulfillment
- 4. Delineate how health is defined and measured as well as recognize the impact of social, environmental, and behavioral determinants of health
- 5. Describe the importance of global health and recognize how actions in the US impact the rest of the world and vice versa
- 6. Identify the critical roles and contributions of epidemiology, environmental/occupational health, health promotion, medicine, and allied health within the public health profession
- 7. Determine their interest in the public health degree and identify the types of professional and educational opportunities available to them within public health

HLTH 310 : Chronic Diseases: Prevention and Control. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Pathogenesis, epidemiology of major chronic diseases, health costs to society, at-risk populations,

population-based prevention, and related best-practice interventions.

Course Outcomes
There are no course outcomes available

HLTH 311 : Infectious Diseases: Prevention and Control. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Human infectious disease risk factors; bacterial, viral, and parasitic agents; pathology, diagnosis, treatment, prevention, and control; communicable, vector-borne, zoonotic, and bioterror diseases of public health.

Course Outcomes
There are no course outcomes available

HLTH 322 : Environmental Health. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: HIth 100.

DESCRIPTION: Environmental factors as determinants of human health: ecosystem and population dynamics; biological, chemical, and physical hazards; risk assessment; economic, political, cultural, and genetic factors.

Course Outcomes
- Provide a global perspective of environmental issues impacting human health
- Describe the various biological, chemical and physical hazards of the ambient, indoor, and work environment that can adversely affect human health
- Discuss those determinents and factors that affect human health and the health of the environment
- Describe how environmental management practices may contribute to or help control emerging diseases
- Provide an assessment of those national and international health agencies, programs, and other resources that play critical roles in improving human health relative to environmental factors
- Discuss elements of policy making as they influence environmental health issues

HLTH 330 : Principles and Practices of Health Promotion. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: HIth 100.

DESCRIPTION: Introduction to the health promotion profession, emphasizing current issues, professional preparation and employment, as well as the philosophy and foundations of professional practice in various settings.

Course Outcomes
- Identify professional opportunities available to health education/health promotion specialists in community, school, worksite, and health care settings.
- Identify the roles and responsibilities for health education/health promotion specialists and opportunities for certifications and advanced study.
- Identify organizations, resources, and professional journals associated with health promotion.
- Provide an overview of theories, models, and initiatives used to guide decision-making in the planning and implementation of health promotion programs and health behavior change.
- Demonstrate awareness and sensitivity of the diverse and unique needs of various age group populations and cultural groups for health promotion.
- Identify techniques for enhancing communication in interactions with clients in health promotion settings.
- Propose health promotion solutions to address health problems among various populations.

HLTH 345 : Principles of Epidemiology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: Stat 121.

DESCRIPTION: Applying analytical tools to study acute and chronic disease to facilitate investigation and control of epidemics.

Course Outcomes
- Investigate disease outbreaks.
- Describe basic concepts, definitions, and history of Epidemiology.
- Describe patterns of disease occurrence.
- Interpret Epidemiologic studies.
- Evaluate treatment effectiveness.
- Measure disease frequency and association.
- Distinguish between statistical association and cause-effect relationships.
- Know basic design strategies in Epidemiology.

HLTH 434 : Evaluation Methods. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100 & HLTH 330

RECOMMENDED: HIth 332, 432.

DESCRIPTION: Design and carry out an evaluation plan that will measure the impact of public health programs at changing behaviors, knowledge, attitudes, and health status. Quantitative and qualitative methods will be discussed.

NOTE: This course should be completed after taking HIth 432--Methods in Health Promotion, and prior to taking Health 439--Program Planning.

Course Outcomes
There are no course outcomes available

HLTH 440 : Computer Applications in Epidemiology. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: HLTH 345
RECOMMENDED: Stat 121.
DESCRIPTION: Introduction to the basics of SAS and EXCEL focusing on the set of commands useful for data-reporting, data-management, formatting and graphics, and data-analysis. Topics include tables and regression models for epidemiologists (cumulative-incidence, case-control, and incidence rate data).

Course Outcomes

- Identify the principles of data management.
- Describe how/when to use tables, charts and graphs for data presentation.
- Create tables, graphs and charts in Excel for presenting public health data.
- Use SAS to manipulate datasets provided by sources such as the Centers for Disease Control and Prevention.
- Use basic SAS procedures to explore, describe and analyze data, including proc contents, proc freq, proc means, proc univariate and proc print.
- Clean and recode data to prepare it for analysis using a variety of data cleaning techniques. Document all cleaning and recoding using comments in the SAS program and external documentation (code books, data dictionaries etc.).
- Create clear and documented output using labels, titles, and formats.
- Conduct basic analyses using SAS including Proc Ttest, Proc ANOVA, Proc Corr, Proc GLM and Proc Logistic.

HLTH 441 : Clinical Trials. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: HLTH 345
RECOMMENDED: Stat 121.
DESCRIPTION: Introduction to methods used in the design, interim monitoring, and analysis of clinical trials, including the impact of patient exclusions and other causes of incomplete data. Concepts and principles emphasized. Main focus on randomized Phase III (comparative) trials.

Course Outcomes

- Develop the capacity to evaluate the design, analysis, and interpretation of human studies.
- Practice the skills needed to identify research opportunities and design studies that pursue those opportunities.
- Develop the capacity for oral and written evaluation of research, as well as oral and written presentation of individual study proposals.

HLTH 443 : Field Epidemiology. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: HLTH 345
RECOMMENDED: Stat 121.
DESCRIPTION: Applying epidemiologic methods, including outbreak investigation; surveillance systems and methods; and infectious disease epidemiology to unexpected health problems when a rapid on-site investigation is necessary for timely intervention.

Course Outcomes

No outcomes are available at this time.

HLTH 447 : Introduction to Biostatistics. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: HLTH 345
RECOMMENDED: Hlth 440 and Stat 121.
DESCRIPTION: Introduction to statistical concepts and analytical methods as applied to data encountered in biotechnology and biomedical sciences. Emphasis on the basic concepts of experimental design, quantitative analysis of data, and statistical inferences.

Course Outcomes

There are no course outcomes available

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: MATH 110 or equivalent.
DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference

Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

2. Complete the following course:

MATH 110 : College Algebra. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 97 or equivalent (see Independent Study).

DESCRIPTION: Functions, polynomials, theory of equations, exponential and logarithmic functions, matrices, determinants, systems of linear equations, permutations, combinations, binomial theorem.

Course Outcomes

- Graph functions using horizontal and vertical shiftsGraph functions using compressions and stretchesGraph functions using reflections about the x-axis or y-axisForm composite functions and find the domainDetermine the inverse of a function and graph an inverse function from the graph of a function
- This course prepares students to take courses in calculus, statistics, mathematics for elementary education majors, and other areas where algebra skills are required. Fluent skills in algebra are necessary for success in any area that uses mathematical analysis. The mastery of college algebra requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. College Algebra develops the concepts of graphing functions, polynomial and rational functions, exponential and logarithmic functions, conic sections, solving systems of equations, the binomial theorem, permutations, combinations, and probability. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information, visit the Math 110 Wiki page.
- Quadratic functionsPolynomial functionsRational functionsPolynomial and rational inequalitiesThe real zeros of a polynomial functionComplex zeros and the Fundamental Theorem of Algebra
- Exponential functionsLogarithmic functionsProperties of LogarithmsLogarithmic and exponential equationsCompound interestExponential growth and decay
- Graph parabolas, ellipses, and hyperbolasFind the equation of parabolas, ellipses, and hyperbolasDiscuss the equation of conic sections to find vertices, foci, asymptotes, and the directrixWork with conic sections that are not centered at the origin
- Solve systems of linear equations using substitution and eliminationSolve systems of non-linear equations using substitution and eliminationDecompose rational functions using partial fractions
- Find terms in a sequence using a formula and a recursive definitionFind a formula for terms in an arithmetic sequence and be able to add the terms of a finite arithmetic sequenceFind a formula for the terms in a geometric sequence and be able to find the sum of finite and infinite geometric seriesProve statements using mathematical induction
- Work with operations on sets such as union, intersection and complement and count the number of elements in a setCompute permutations and combinationsEvaluate binomial coefficients and expand binomials using the Binomial TheoremCompute probabilities of equally likely outcomes

OR equivalent ACT score

3. Complete 19-22 hours from the following:

GEOG 212 : Introduction to Geographic Information Systems. (3:2:1)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Concepts in the use of small- and large-scale digital map data, emphasizing landscape interpretation and feature description.

Course Outcomes

- Understand basic spatial concepts and data models that form the foundation of GIS.
- Acquire geospatial data from common sources and manipuate them for a specific application.
- Analyze data using GIS to solve real world problems.
- Describe several applications in which GIS is used to solve geographic problems.
- Design and use maps to explore and communicate geospatial information.

HLTH 420 : Injury and Violence Prevention. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100

DESCRIPTION: Concepts and interventions related to both unintentional injuries and violence.

Course Outcomes

- Describe the impact of injures on health and on society in terms of mortality, morbidity, disability, and cost.
- Define the terms used in the injury prevention field.
- Describe the models used to analyze injuries and determine interventions.
- Select valid sources of injury prevention information.
- Select and recommend proven and effective injury prevention interventions.

HLTH 424 : Occupational Health and Safety. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: HLTH 100 & HLTH 322

DESCRIPTION: In-depth focus on workplace health and safety through a multidisciplinary approach to the anticipation, recognition, evaluation, and prevention and control of workplace-related illnesses and injuries.

Course Outcomes

- Demonstrate competency in using the OSHA standards by identifying specific violations of current standards.
- Describe the purpose and scope of the Occupational Health and Safety Act as well as other relevant safety and health legislation and consensus standards.
- Discuss and demonstrate the elements involved in completing an accident investigation.
- Explain how the functions of management are utilized to assure safe conditions and practices through the development of specific programs as well as an overall safety and health program.
- Identify, evaluate, and develop loss control strategies to address the hazards associated with operating common manufacturing and construction equipment and processes.

HLTH 439 : Program Planning. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100 & HLTH 330; Concurrent with HIth 434.

RECOMMENDED: HIth 432.

DESCRIPTION: Introduction to needs assessment, program development, implementation, and evaluation in health promotion and public health.

Course Outcomes

- 1. Conduct a needs assessment by collecting and analyzing data to determine the health needs of a community
- 2. Use needs assessment data and analysis to identify a priority population for interventions.
- 3. Distinguish between goals and objectives and develop process, impact and outcome objectives.
- 4. Select, implement and manage evidence-based interventions.
- 5. Establish appropriate budgets and program timelines.
- 6. Distinguish between process and outcome evaluation and apply appropriate strategies.
- 7. Understand and interpret the DHHS'sHealthy People 2020 and the CDC's Framework for Program Evaluation in Public Health.

HLTH 442 : Special Topics in Epidemiology. (3:3:0)

WHEN TAUGHT: Winter

RECOMMENDED: HIth 345, Stat 121.

DESCRIPTION: Topics include environmental epidemiology, statistical methods in epidemiology, social epidemiology, genetic epidemiology, categorical data analysis, applied longitudinal analysis, survival analysis, and life table methods.

Course Outcomes

- Explain the Basic Elements of Research, Exposure and Outcome Assessment
- Show how Monitoring is accomplished in Environmental Health
- Describe Epidemiologic Study Designs and explain Statistical Modeling and Causal Inference
- Explain challenges associated with investigating Disease Clusters
- Describe Mapping, Geographic Information Systems and Time Series
- Give examples of current health issues in Indoor and Ambient Air Quality
- Give examples of current health issues in Soil and Food Contaminants
- Give examples of current health issues in Water and Radiation
- Describe how Climate Change can affect Health

HLTH 450 : Women's Health Issues. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Overview of selected health topics affecting women's health status. Primary emphasis on steps to enhance personal health and fulfill divine roles from childhood through adulthood.

Course Outcomes

- Identify and understand the determinants of women's health issues.(Learning activities: lecture, class discussion, videos, out of class activites, guest lecturers)
- Identify and report on specific chronic and infectious diseases that affect women.(Learning activities: lecture, class discussion, book review, guest lecture)
- Identify ways to improve women's health using a variety of assessment sources.(Learning activities: lecture, class discussion, review of CDC and other health statistics, interviews, guest lecture)

HLTH 460 : Substance Abuse and Addictive Behavior. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Physiological, psychological, sociological, and legal implications of drug use and addictive behaviors, emphasizing nature, cause, treatment, and prevention.

Course Outcomes

- Explain substance use and abuse from a multidisciplinary perspective.
- List and describe specific social policies that reduce alcohol, tobacco, and other drug use.
- Explain the major social determinants and predictors of substance use in the United States.
- Explain the biological basis of drug addiction.
- Describe the health problems and risk associated with specific drugs.
- Describe the marketing, public relations, and political activities of the tobacco and alcohol industries.
- Provide the descriptive epidemiology of substance abuse in the United States.

HLTH 466 : Health and the Aging Process. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Public health strategies to promote health and functional independence in the context of the inevitable consequence of aging.

Course Outcomes

- Understand the physiological aspects of the normal aging process.
- Understand aging as a pathological process and the factors in both the external and internal milieu, this may contribute to premature aging.
- Relate knowledge about the organic and infectious diseases, common disorders, and disabilities prevalent among the elderly to disease prevention and health promotion among the aged.
- Become exposed to professional literature pertaining to the biological, medical, and health aspects of aging including the use of clinical preventive services as noted by gerontology researchers.
- Understand the physiological aspects of aging and the experimental approaches used in studying the aging process.
- Identify and distinguish the federal, state, and community health programs and services for the aged, including medical care, hospitalization, extended care, rehabilitation, and health maintenance.
- Promote healthy lifestyle behaviors that help prevent premature aging, promote the health of the elderly, and contribute to the extension of the prime of life.
- Understand decision-making related to end-of-life planning.

HLTH 480 : International Health. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Identifying disease patterns in "developing" countries, exploring the social and cultural context of health, and reviewing behavior change strategies for improving well-being.

Course Outcomes

- Idenitfy behaviors that improve maternal and child health and how they may be specific for particular groups.
- Discuss the determinants of global diseases and why inequalities and inequities exist.
- Explain how culture, our own and others, facilitates or hinders practicing optimal health behaviors.
- Describe the leading causes of morbidity (sickness) and mortablity among women and children in the developing world.
- Discuss how undernutrition and overnutrition contribute to morbidity and mortality related to infectious and chronic disease.
- Using principles of epidemiology, identify the leading causes of morbidity (sickness) and mortablity among women and children in the developing world and compare the burden of disease across different regions of the world.
- Describe how monitoring, evaluation, and applied research improve health programs.
- Discuss successful, evidence-based strategies for changing behaviors and improving health.

HLTH 491R : Mentored Research. (.5-3:Arr.:0)

DESCRIPTION: Collaborate with professors on mentoring grants or other public health-related research and initiatives.

Course Outcomes

- Experience at least one subset of research skills while conducting supervised public health research with a faculty member.

(Up to 3 credits.)

HLTH 496R : Academic Internship. (.5-9:ARR:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: HLTH 439

DESCRIPTION: Senior capstone experience.

Course Outcomes

- Obtain experience, as proctored by an approved internship supervisor, to apply professional competencies in public health as assessed through an internship report and internship supervisor rating

(Up to 6 credits.)

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

Course Outcomes

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 116 : Essentials of Calculus. (1:2:0)

WHEN TAUGHT: Spring; Summer

PREREQUISITE: Math 110.

DESCRIPTION: Review of algebra, graph of line, slope. Limits and derivatives (standard functions, compositions of such functions), derivative for polynomials, exponentials, logarithms. Product, quotient and chain rule. Optimization (extrema), application to business problems. Newton's method.

Course Outcomes

- Students receive a brief overview of differential calculus. Topics covered include limits, derivatives, and applications of differentiation to optimization of functions.For more detailed information visit the Math 116 Wiki page.

NDFS 201 : Society, Nutrition, and Chronic Disease. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 100

DESCRIPTION: Behavioral, dietary, and environmental factors that influence nutrition and risks for chronic disease.

Course Outcomes

- Explain or describe how behavioral, dietary, and environmental factors influence nutrition and chronic disease risks.
- Find scientific research articles and identify their key characteristics. Identify consistencies or inconsistencies in studies of diet and chronic disease risks.
- Apply information about behavioral, dietary, and environmental factors to reduce chronic disease risks.

NDFS 380 : International Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 100

DESCRIPTION: Causes and consequences of nutrient deficiencies common in developing countries. Appropriate interventions to prevent or treat malnutrition.

Course Outcomes

- Relate critical nutrient requirements deficiencies to nutritional diseases and poor cognitive devolopment
- Understand the breadth of undernutrition, poverty and hunger that plague the developing world.
- Understand the scientific literature that relates to nutional problems in devloping societies
- Relate the nutritional status of undernourished children to their diets and suggest plausible solutions

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes

There are no course outcomes available

PDBIO 205 : Human Biology. (3:3:0)

OFFERED: Independent Study online course.

DESCRIPTION: Body systems and influence of heredity.

NOTE: For nonbiology majors. Currently offered online only.

Course Outcomes

- Demonstrate understanding of the anatomic and physiologic terminology necessary forwritten and oral communication about the body, its functions, and its interaction with allother species on this planet.
- Students will demonstrate understanding of human biology at the chemical, microscopic,anatomical, physiological, and ecological levels.
- Demonstrate the ability to connect understanding of the body and its function with thefunction and survival of the world we live in.

PDBIO 305 : Human Physiology (with lab). (4:4:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

RECOMMENDED: A general biology course.

DESCRIPTION: Function of body organ systems.

NOTE: Not acceptable for physiology and developmental biology, biophysics, or neuroscience majors. Designed for students with basic chemistry / no molecular biology. Students with chemistry/molecular biology should take PDBio 362.

Course Outcomes
- Students will demonstrate the proper use of physiology terminology.
- Student will demonstrate a well-integrated and comprehensive understanding of the human body in health and disease.
- Students will use knowledge of cells and organ systems to solve problems related to the function of the human body.
- Students will demonstrate the necessary knowledge and skills in physiology that are required for their majors and future aspirations for graduate and professional school.
- Students will develop and demonstrate in their daily lives a deeper appreciation and respect for the human body.
- Students will demonstrate the knowledge to make informed personal (medical,ethical,and political)decisions regarding physiological concepts.

PDBIO 362 : Advanced Physiology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220

DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.

NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes
- Students will manifest an understanding of how structures at the molecular level lead to properties associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

PDBIO 365 : Pathophysiology. (4:4:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 305; or PDBIO 362

DESCRIPTION: Variations in physiological mechanisms that account for development of common disturbances in normal control and activities of body's organs and organ systems.

Course Outcomes
- Students will exhibit an integrative understanding of the biochemistry, molecular biology, genetics, cell biology, microbiology, environmental biology, and physiology related to the prevention, development, and treatment of common diseases.
- Students will demonstrate through case study analysis a command of problem solving skills related to the diagnosis and treatment of pathophysiological conditions.
- Pupils will manifest a command of the physiology and pathophysiological vocabulary necessary to effectively communicate with other biomedical professionals and the general public.
- Students will be able to articulate the ethical issues related to the treatment and prevention of pathophysiological conditions.
- Students will manifest an increase in their respect for the human body and adopt a life style consistent with this respect.

SOC 300 : Methods of Research in Sociology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Soc 111 or 112 or 113.

DESCRIPTION: Tools of social research; survey, experimentation, content analysis, secondary analysis, qualitative research, evaluation research, data processing and analysis, and report writing.

Course Outcomes
There are no course outcomes available

STAT 124 : SAS Certification 1. (1:1:1)

WHEN TAUGHT: Spring

PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.

RECOMMENDED: Concurrent enrollment in STAT 224.

DESCRIPTION: SAS basic programming certification.

Course Outcomes
- Import and export raw data files
- Manipulate and transform data
- Combine SAS data sets
- Create basic detail and summary reports using SAS procedures
- Identify and correct data, syntax, and programming logic errors
- For more information on the SAS Global Certification program and its value in the job market visit http://support.sas.com/certify/

STAT 125 : SAS Certification 2. (1:1:1)

WHEN TAUGHT: Summer

PREREQUISITE: STAT 124

RECOMMENDED: Concurrent enrollment in STAT 224.

DESCRIPTION: Advanced SAS programming certification.

Course Outcomes
- Solve complex problems using advanced DATA step programming statements and efficiency techniques
- Write and interpret SAS SQL code
- Create and use the SAS MACRO facility
- SAS Certified Advanced Programmer certification represents the upper echelon of SAS programmers. Those who earn the advanced programming credential have demonstrated a high level of proficiency in SAS programming expertise and are a much sought after commodity in the global job market. For more information on the SAS Global Certification program visit http://support.sas.com/certify/

STAT 230 : Analysis of Variance. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.
RECOMMENDED: Concurrent enrollment in MATH 112.
DESCRIPTION: Scientific method, statistical thinking, sources of variation, completely randomized design, ANOVA, power and sample size considerations, multiple testing, randomized complete blocks, factorial designs, interactions. Introduction to statistical software.

Course Outcomes
- Define the experimental unit, response variable, factor(s), and level(s) of a basic experiment
- Understand the role of randomization and replication in inferring causation
- Perform a completely randomized design and construct the ANOVA table in SAS and R
- Compute the minimum number of replicates in a completely randomized design to achieve a given level of power
- Compute pairwise tests of differences in means in SAS and R to understand a significant overall F-test
- Perform a randomized complete block design and construct the ANOVA table in SAS and R
- Perform a factorial design and construct the ANOVA table in SAS and R
- Explain a statistically significant interaction
- Describe the differences between a split plot and a two-way ANOVA

STAT 234 : Methods of Survey Sampling. (3:3:2)

WHEN TAUGHT: Fall
PREREQUISITE: STAT 121; or STAT 151; or STAT 201; or Stat 301.
DESCRIPTION: Sampling frames; questionnaire design; simple random, systematic, stratified, and cluster sampling methods; comparing domain means; contingency table analysis.

Course Outcomes
- Identify and sample using simple random sampling and various forms of stratified sampling, cluster sampling, and systematic sampling
- Accurately identify and perform variance calculations for basic designs
- Participate in a real project involving sampling methodologies and appropriate point estimate and variance calculations
- Create graphical representations of results
- Demonstrate effective written and oral communication skills as they present their findings

STAT 330 : Introduction to Regression. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: STAT 230 & MATH 112
RECOMMENDED: MATH 113 or concurrent enrollment.
DESCRIPTION: Regression, transformations, residuals, indicator variables, variable selection, logistic regression, time series, observational studies, statistical software.

Course Outcomes
- Explain the difference between ANOVA and regression, and their computational methods
- Explain the difference in inference between a designed experiment and observational study
- Fit a regression model in SAS and R
- Apply appropriate transformations to the response variable to improve agreement with regression assumptions
- Use residuals and influence diagnostics to assess model fit, agreement with regression assumptions, and identify outliers and influential observations
- Create sets of indicator variables for categorical explanatory variables
- Apply step-wise selection to identify a subset regression model that selects the most significant explanatory variables from a large data set
- Fit a logistic regression model in SAS and R
- Fit an ARIMA(p,d,q) model and generate forecasts with prediction intervals in SAS and R

Note 1: If student uses an ACT score to fulfill the Math 110 requirement, 22 elective hours are needed.

Note 2: Only 6 credits of elective credits from Health 420, 424, 439, 442, 450, 460, 466, and 480 can be applied toward the degree.

Note 3: Prerequisites for PDBio 362:

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.
DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 105 or equivalent.
RECOMMENDED: Concurrent enrollment in Phscs 108.
DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes
There are no course outcomes available

Or
PHSCS 220 : Introduction to Electricity and Magnetism. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: MATH 113; Phscs 121 or equivalent.
DESCRIPTION: Electricity and magnetism. Weekly lab.

Course Outcomes
There are no course outcomes available

Note 4: Prerequisites for PDBio 365:

PDBIO 305 : Human Physiology (with lab). (4:4:2)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Chem 101 or equivalent.
RECOMMENDED: A general biology course.
DESCRIPTION: Function of body organ systems.
NOTE: Not acceptable for physiology and developmental biology, biophysics, or neuroscience majors. Designed for students with basic chemistry / no molecular biology. Students with chemistry/molecular biology should take PDBio 362.

Course Outcomes

- Students will demonstrate the proper use of physiology terminology.
- Student will demonstrate a well-integrated and comprehensive understanding of the human body in health and disease.
- Students will use knowledge of cells and organ systems to solve problems related to the function of the human body.
- Students will demonstrate the necessary knowledge and skills in physiology that are required for their majors and future aspirations for graduate and professional school.
- Students will develop and demonstrate in their daily lives a deeper appreciation and respect for the human body.
- Students will demonstrate the knowledge to make informed personal (medical,ethical,and political)decisions regarding physiological concepts.

Or:
PDBIO 362 : Advanced Physiology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220
DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.
NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes

- Students will manifest an understanding of how structures at the molecular level lead to properties associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

Recommended GE Courses:

ENGL 315 : Writing in the Social Sciences. (3:3:0)

OFFERED: Honors also.
WHEN Fall; Winter; Spring; Summer

TAUGHT:

PREREQUISITE: First-year writing, junior or senior status.

DESCRIPTION: Writing characteristic of disciplines that inquire into human behavior and institutions; correspondence, proposals, library paper, empirical research, and reviews.

NOTE: Carries GE Advanced Written and Oral Communication credit.

Course Outcomes

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to specific rhetorical situations.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Successfully complete the library tour, tutorial, and tests (if not completed as part of the first-year writing requirement). Successfully complete a library mini-course taught for their major area and demonstrate the ability to use the library effectively.
- Demonstrate the ability to create, number, and label tables and figures.
- Effectively evaluate and comment on the writing of others to facilitate revision.

Or

ENGL 316 : Technical Communication. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: First-year writing, junior or senior status.

DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.

NOTE: Carries GE Advanced Written and Oral Communication credit.

Course Outcomes

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

Recommended Elective Courses:

- Math 112, 113 for students who want a firm foundation in calculus and/or plan to pursue graduate education.
- Students considering graduate work in epidemiology are encouraged to consider the statistics electives.

*Hours include courses that may fulfill university core requirements.

The Discipline

Public health professionals work to create conditions that ensure the health and safety of individuals, families, and communities. Public health students are trained to inform, educate, and empower people about health issues; mobilize communities to take ownership for their own health; monitor health status and diagnose and investigate health problems and health hazards; develop policies and laws to protect health and ensure safety; and link people to needed health services. The public health mission is carried out through organized, interdisciplinary efforts that address the physical, mental, and environmental health concerns of communities and populations at risk for disease and injury.

Four of several disciplines within public health are represented as emphases within the major: (1) environmental/occupational health identifies and controls factors in the environment (air, water, food, toxins, etc.) or conditions at the workplace which affect health; (2) epidemiology investigates and discovers what causes disease and disability and how diseases are spread or distributed across populations; (3) health promotion facilitates behavior change among individuals and improves population health through policy, advocacy, education, and communication; and (4) health science trains students interested in working in public health after earning an advanced degree in a medical, dental, or other allied health area.

Career Opportunities

There has never been a better time to pursue a career in public health. It is an exciting and growing field of study and a diverse and dynamic profession. It is filled with rewards associated with the pursuit of serving others. The development and delivery of population-based prevention programs will be the key to major advances in health improvement in the 21st century. Public health will continue to be called upon to monitor and assess health problems, prevent and control diseases and injuries, and protect the health of communities and worksites from various environmental and occupational risks associated with man-made and natural disasters and emergencies.

Public health graduates are qualified to work in governmental health agencies on the local, state, federal, and international levels. Private-sector employment can be found in a variety of businesses, community health agencies, managed care organizations, hospitals, clinics, research institutes, voluntary health agencies, and non-governmental organizations. Opportunities for employment in public health are readily available, but recruiters will not typically come to campus to hire graduates. This means graduates must be organized and proactive in their career planning. Students can increase the likelihood of obtaining a position by balancing classroom activities with voluntary or paid service to public health agencies. Obtaining certifications related to specific tracks within the major and careful development of a professional portfolio enhance employment opportunities.

While there are many specialties or disciplines in public health, most career opportunities are found within the fields represented by the emphases in the major. Entry-level salaries with a bachelor's degree in public health will range from approximately $35,000–$60,000 but will vary significantly depending upon the specific discipline, type of organization, and geographic location.

Program Requirements | View MAP | View Program Outcomes

1. Complete the following courses:

HLTH 100 : Introduction to Public Health. (1:1:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Introduction to public health professions including exploration of current issues, job opportunities, the essential public health services, and an overview of the public health major.

Course Outcomes

- 1. Identify key events in the history of public health that have shaped the current state of the profession
- 2. Describe core public health values
- 3. Identify the ten essential public health services and describe which aspects of the profession hold the most relevance for employment and personal fulfillment
- 4. Delineate how health is defined and measured as well as recognize the impact of social, environmental, and behavioral determinants of health
- 5. Describe the importance of global health and recognize how actions in the US impact the rest of the world and vice versa
- 6. Identify the critical roles and contributions of epidemiology, environmental/occupational health, health promotion, medicine, and allied health within the public health profession
- 7. Determine their interest in the public health degree and identify the types of professional and educational opportunities available to them within public health

HLTH 310 : Chronic Diseases: Prevention and Control. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Pathogenesis, epidemiology of major chronic diseases, health costs to society, at-risk populations,

population-based prevention, and related best-practice interventions.

Course Outcomes
There are no course outcomes available

HLTH 311 : Infectious Diseases: Prevention and Control. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Human infectious disease risk factors; bacterial, viral, and parasitic agents; pathology, diagnosis, treatment, prevention, and control; communicable, vector-borne, zoonotic, and bioterror diseases of public health.

Course Outcomes
There are no course outcomes available

HLTH 322 : Environmental Health. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: HIth 100.

DESCRIPTION: Environmental factors as determinants of human health: ecosystem and population dynamics; biological, chemical, and physical hazards; risk assessment; economic, political, cultural, and genetic factors.

Course Outcomes
- Provide a global perspective of environmental issues impacting human health
- Describe the various biological, chemical and physical hazards of the ambient, indoor, and work environment that can adversely affect human health
- Discuss those determinents and factors that affect human health and the health of the environment
- Describe how environmental management practices may contribute to or help control emerging diseases
- Provide an assessment of those national and international health agencies, programs, and other resources that play critical roles in improving human health relative to environmental factors
- Discuss elements of policy making as they influence environmental health issues

HLTH 330 : Principles and Practices of Health Promotion. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: HIth 100.

DESCRIPTION: Introduction to the health promotion profession, emphasizing current issues, professional preparation and employment, as well as the philosophy and foundations of professional practice in various settings.

Course Outcomes
- Identify professional opportunities available to health education/health promotion specialists in community, school, worksite, and health care settings.
- Identify the roles and responsibilities for health education/health promotion specialists and opportunities for certifications and advanced study.
- Identify organizations, resources, and professional journals associated with health promotion.
- Provide an overview of theories, models, and initiatives used to guide decision-making in the planning and implementation of health promotion programs and health behavior change.
- Demonstrate awareness and sensitivity of the diverse and unique needs of various age group populations and cultural groups for health promotion.
- Identify techniques for enhancing communication in interactions with clients in health promotion settings.
- Propose health promotion solutions to address health problems among various populations.

HLTH 332 : Technology in Health Promotion. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Application of computer software and electronic communication technologies in health promotion.

Course Outcomes
There are no course outcomes available

HLTH 335 : Health Behavior Change. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: HIth 330.

DESCRIPTION: Understanding health behavior change theories for individuals and populations. Practical application of related models and theories.

Course Outcomes
- Evaluate the ability of selected socio-behavioral theories and models for furthering understanding of important public health problems and issues, with particular reference to health promotion and disease prevention.
- Identify prominenent features and constructs in commonly used theories and models of health behavior change.
- Identify the important role of culture in the context of behavior change.

HLTH 345 : Principles of Epidemiology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: Stat 121.

DESCRIPTION: Applying analytical tools to study acute and chronic disease to facilitate investigation and control of epidemics.

Course Outcomes

- Investigate disease outbreaks.
- Describe basic concepts, definitions, and history of Epidemiology.
- Describe patterns of disease occurrence.
- Interpret Epidemiologic studies.
- Evaluate treatment effectiveness.
- Measure disease frequency and association.
- Distinguish between statistical association and cause-effect relationships.
- Know basic design strategies in Epidemiology.

HLTH 432 : Methods in Health Promotion. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100 & HLTH 330

RECOMMENDED: HIth 332.

DESCRIPTION: Health promotion methods, interventions, and strategies that influence behaviors and advance public health practices within communities.

Course Outcomes

- 1. Identify the six major categories of methods for public health interventions. Additionally, distinguish between interventions, methods and strategies.
- 2. Explain, justify and apply the principles that guide the selection of and implementation of public health methods and strategies to include key factors such as unique community needs, best practice, evidence and effectiveness, political expediency, and cost.
- 3. Create awareness/education messages, including media products, to influence stakeholders, policy makers and their constituents on issues of public health importance.
- 4. Design plans to engage community members and key stakeholders to become involved in appropriate mobilization, communication, and/or policy strategies.
- 5. Identify appropriate advocacy strategies to influence decision makers, or prompt policy change, at organizational and community levels.
- 6. Enhance personal advocacy, communication, oral presentation, leadership and team-building skills appropriate for health promotion practice.

HLTH 434 : Evaluation Methods. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100 & HLTH 330

RECOMMENDED: HIth 332, 432.

DESCRIPTION: Design and carry out an evaluation plan that will measure the impact of public health programs at changing behaviors, knowledge, attitudes, and health status. Quantitative and qualitative methods will be discussed.

NOTE: This course should be completed after taking HIth 432--Methods in Health Promotion, and prior to taking Health 439--Program Planning.

Course Outcomes

There are no course outcomes available

HLTH 439 : Program Planning. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100 & HLTH 330; Concurrent with HIth 434.

RECOMMENDED: HIth 432.

DESCRIPTION: Introduction to needs assessment, program development, implementation, and evaluation in health promotion and public health.

Course Outcomes

- 1. Conduct a needs assessment by collecting and analyzing data to determine the health needs of a community
- 2. Use needs assessment data and analysis to identify a priority population for interventions.
- 3. Distinguish between goals and objectives and develop process, impact and outcome objectives.
- 4. Select, implement and manage evidence-based interventions.
- 5. Establish appropriate budgets and program timelines.
- 6. Distinguish between process and outcome evaluation and apply appropriate strategies.
- 7. Understand and interpret the DHHS'sHealthy People 2020 and the CDC's Framework for Program Evaluation in Public Health.

2. Complete 2 hours of the following:

STDEV 317 : Career Strategies for Employment and Internships. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Preparing for employment and internship opportunities. Practical strategies to facilitate internship and/or career preparation: resumes, cover letters, networking, interviewing, and Internet research.

Course Outcomes

There are no course outcomes available

3. Complete 6 hours from the following:

HLTH 496R : Academic Internship. (.5-9:ARR:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: HLTH 439

DESCRIPTION: Senior capstone experience.

Course Outcomes
- Obtain experience, as proctored by an approved internship supervisor, to apply professional competencies in public health as assessed through an internship report and internship supervisor rating

Note: Prior to taking Hlth 496R, the student must complete Hlth 100, 310, 311, 322, 330, 345, 432, 434, and 439.

4. Complete 16 hours from the following (a minimum of six hours must be taken from departmental courses):

BUS M 241 : Marketing Management. (3:3:0)

OFFERED: Independent Study also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Marketing's role in society and the firm, marketing opportunities, the consumer market, and management of marketing mix.

Course Outcomes
- Understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers.
- Describe how specific firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Design a marketing plan for a new venture by applying the appropriate tools and approaches studied

COMMS 235 : Introduction to Public Relations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Philosophy and practice of public relations in business, government, education, and other institutions. Study of publics, media, methods, press relations, and publicity.

Course Outcomes
- Students will be introduced to the professional field of public relations, its history, theory and principles.
- Students will learn the basic skills in the practice of strategic planning and implementation in public relations.
- Students will learn appropriate legal and ethical behavior in the field of public relations.
- Students will be exposed to issues of diversity in the public relations profession.
- Students will recognize the historical development of public relations.
- Students will recognize the role of public relations in business and society.
- Students will establish a theoretical foundation for various practices of public relations and decision making.
- Students will be able to explain the four-step public relations process of research, planning, communication and evaluation and apply the process to a public relation case.
- Students will define key publics and explain how to identify and address them.
- Students will understand the skills necessary for the effective practice of public relations, including professional writing skills, strategic thinking, planning, organization and crisis management.
- Students will understand how organizations work with the media and the crucial role of media in forming public opinion.

EXSC 387 : Lifestyle and Chronic Disease Prevention. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Current scientific evidence demonstrating how lifestyle affects disease processes. Healthy lifestyle concepts specifically needed by wellness professionals, health educators, and health promotion practitioners; influence of unhealthy lifestyle as basis for chronic diseases, i.e., cardiovascular disease, cancer, and diabetes.

Course Outcomes
- Develop an awareness of what constitutes a healthy lifestyle
- Understand the use and interpretation of statistical techniques used in scientific papers on health and lifestyle
- Become familiar with the scientific literature that supports healthy living
- Gain knowledge needed to help others adopt and maintain a healthy lifestyle

EXSC 410 : Stress Management. (2:2:0)

WHEN TAUGHT: Fall; Winter
DESCRIPTION: Practical experience in learning to understand and manage stress.

Course Outcomes
- Master the basic understanding of the physiological mechanisms responsible for the fight-or-flight response and subsequent manifestations of various symptoms of target organ dysfunctions. Be able to apply this understanding to stress management and disease prevention.
- Understand and discuss the holistic nature (mind-body-spirit) of stress management and comprehend the mind-body connection of the stress and disease process.
- Be able to recognize potential stressors and develop strategies to prevent (or reduce the magnitude) these stressors from eliciting a stress response.
- Be able to develop strategies to reduce daily stressors.
- Understand the principles behind the various relaxation techniques and be able to apply these techniques to managing stress.

GEOG 212 : Introduction to Geographic Information Systems. (3:2:1)

WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Concepts in the use of small- and large-scale digital map data, emphasizing landscape interpretation and feature description.

Course Outcomes
- Understand basic spatial concepts and data models that form the foundation of GIS.
- Acquire geospatial data from common sources and manipuate them for a specific application.
- Analyze data using GIS to solve real world problems.
- Describe several applications in which GIS is used to solve geographic problems.
- Design and use maps to explore and communicate geospatial information.

HLTH 403R : Health Problems Workshop. (.5-5:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Summer

Course Outcomes
- Reflect a focused analysis of readings and conduct applied projects for a special readings topic important to public health.

HLTH 420 : Injury and Violence Prevention. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100

DESCRIPTION: Concepts and interventions related to both unintentional injuries and violence.

Course Outcomes
- Describe the impact of injures on health and on society in terms of mortality, morbidity, disability, and cost.
- Define the terms used in the injury prevention field.
- Describe the models used to analyze injuries and determine interventions.
- Select valid sources of injury prevention information.
- Select and recommend proven and effective injury prevention interventions.

HLTH 422 : Disaster Response and Emergency Preparedness. (3:3:0)

WHEN TAUGHT: Fall; Winter

RECOMMENDED: HIth 311, 420.

DESCRIPTION: Key elements of public health preparedness and response to the variety of natural, technological, and man-made disasters occurring routinely on a global basis.

Course Outcomes
There are no course outcomes available

HLTH 443 : Field Epidemiology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: HLTH 345

RECOMMENDED: Stat 121.

DESCRIPTION: Applying epidemiologic methods, including outbreak investigation; surveillance systems and methods; and infectious disease epidemiology to unexpected health problems when a rapid on-site investigation is necessary for timely intervention.

Course Outcomes
- Be familiar with the steps of a field investigation.
- Be familiar with surveys and sampling, analyzing and interpreting data, describing and communicating the findings, dealing with the public and the media.
- Define cluster and cluster investigation methods for assessing reported clusters and discuss the process for investigating clusters. Identify the primary challenges in reported clusters.

HLTH 450 : Women's Health Issues. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Overview of selected health topics affecting women's health status. Primary emphasis on steps to enhance personal health and fulfill divine roles from childhood through adulthood.

Course Outcomes
- Identify and understand the determinants of women's health issues.(Learning activities: lecture, class discussion, videos, out of class activites, guest lecturers)
- Identify and report on specific chronic and infectious diseases that affect women.(Learning activities: lecture, class discussion, book review, guest lecture)
- Identify ways to improve women's health using a variety of assessment sources.(Learning activities: lecture, class discussion, review of CDC and other health statistics, interviews, guest lecture)

HLTH 460 : Substance Abuse and Addictive Behavior. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Physiological, psychological, sociological, and legal implications of drug use and addictive behaviors, emphasizing nature, cause, treatment, and prevention.

Course Outcomes
- Explain substance use and abuse from a multidisciplinary perspective.
- List and describe specific social policies that reduce alcohol, tobacco, and other drug use.
- Explain the major social determinants and predictors of substance use in the United States.
- Explain the biological basis of drug addiction.
- Describe the health problems and risk associated with specific drugs.
- Describe the marketing, public relations, and political activities of the tobacco and alcohol industries.

Provide the descriptive epidemiology of substance abuse in the United States.

HLTH 466 : Health and the Aging Process. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Public health strategies to promote health and functional independence in the context of the inevitable consequence of aging.

Course Outcomes

- Understand the physiological aspects of the normal aging process.
- Understand aging as a pathological process and the factors in both the external and internal milieu, this may contribute to premature aging.
- Relate knowledge about the organic and infectious diseases, common disorders, and disabilities prevalent among the elderly to disease prevention and health promotion among the aged.
- Become exposed to professional literature pertaining to the biological, medical, and health aspects of aging including the use of clinical preventive services as noted by gerontology researchers.
- Understand the physiological aspects of aging and the experimental approaches used in studying the aging process.
- Identify and distinguish the federal, state, and community health programs and services for the aged, including medical care, hospitalization, extended care, rehabilitation, and health maintenance.
- Promote healthy lifestyle behaviors that help prevent premature aging, promote the health of the elderly, and contribute to the extension of the prime of life.
- Understand decision-making related to end-of-life planning.

HLTH 480 : International Health. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Identifying disease patterns in "developing" countries, exploring the social and cultural context of health, and reviewing behavior change strategies for improving well-being.

Course Outcomes

- Idenitfy behaviors that improve maternal and child health and how they may be specific for particular groups.
- Discuss the determinants of global diseases and why inequalities and inequities exist.
- Explain how culture, our own and others, facilitates or hinders practicing optimal health behaviors.
- Describe the leading causes of morbidity (sickness) and mortablity among women and children in the developing world.
- Discuss how undernutrition and overnutrition contribute to morbidity and mortality related to infectious and chronic disease.
- Using principles of epidemiology, identify the leading causes of morbidity (sickness) and mortablity among women and children in the developing world and compare the burden of disease across different regions of the world.
- Describe how monitoring, evaluation, and applied research improve health programs.
- Discuss successful, evidence-based strategies for changing behaviors and improving health.

HLTH 491R : Mentored Research. (.5-3:Arr.:0)

DESCRIPTION: Collaborate with professors on mentoring grants or other public health-related research and initiatives.

Course Outcomes

- Experience at least one subset of research skills while conducting supervised public health research with a faculty member.

(Up to three hours)

NDFS 100 : Essentials of Human Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Food-oriented study of nutritional facts and principles as a basis for dietary choices; consequences of choices; scientifically examining controversial topics.

Course Outcomes

- Apply the scientific method to identify and interpret credible nutrition information.
- Identify, interpret, and apply nutrition information.
- Identify functions of nutrients and their major food sources.

NDFS 201 : Society, Nutrition, and Chronic Disease. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 100

DESCRIPTION: Behavioral, dietary, and environmental factors that influence nutrition and risks for chronic disease.

Course Outcomes

- Explain or describe how behavioral, dietary, and environmental factors influence nutrition and chronic disease risks.
- Find scientific research articles and identify their key characteristics. Identify consistencies or inconsistencies in studies of diet and chronic disease risks.
- Apply information about behavioral, dietary, and environmental factors to reduce chronic disease risks.

Note: Prerequisite for NDFS 201:

NDFS 100 : Essentials of Human Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Food-oriented study of nutritional facts and principles as a basis for dietary choices; consequences of choices; scientifically examining controversial topics.

Course Outcomes

- Apply the scientific method to identify and interpret credible nutrition information.
- Identify, interpret, and apply nutrition information.
- Identify functions of nutrients and their major food sources.

Recommended GE Courses:

ENGL 315 : Writing in the Social Sciences. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: First-year writing, junior or senior status.

DESCRIPTION: Writing characteristic of disciplines that inquire into human behavior and institutions; correspondence, proposals, library paper, empirical research, and reviews.

NOTE: Carries GE Advanced Written and Oral Communication credit.

Course Outcomes

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to specific rhetorical situations.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Successfully complete the library tour, tutorial, and tests (if not completed as part of the first-year writing requirement). Successfully complete a library mini-course taught for their major area and demonstrate the ability to use the library effectively.
- Demonstrate the ability to create, number, and label tables and figures.
- Effectively evaluate and comment on the writing of others to facilitate revision.

Or

ENGL 316 : Technical Communication. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: First-year writing, junior or senior status.

DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.

NOTE: Carries GE Advanced Written and Oral Communication credit.

Course Outcomes

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data

- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

*Hours include courses that may fulfill university core requirements.

The Discipline

Public health professionals work to create conditions that ensure the health and safety of individuals, families, and communities. Public health students are trained to inform, educate, and empower people about health issues; mobilize communities to take ownership for their own health; monitor health status and diagnose and investigate health problems and health hazards; develop policies and laws to protect health and ensure safety; and link people to needed health services. The public health mission is carried out through organized, interdisciplinary efforts that address the physical, mental, and environmental health concerns of communities and populations at risk for disease and injury.

Four of several disciplines within public health are represented as emphases within the major: (1) environmental/occupational health identifies and controls factors in the environment (air, water, food, toxins, etc.) or conditions at the workplace which affect health; (2) epidemiology investigates and discovers what causes disease and disability and how diseases are spread or distributed across populations; (3) health promotion facilitates behavior change among individuals and improves population health through policy, advocacy, education, and communication; and (4) health science trains students interested in working in public health after earning an advanced degree in a medical, dental, or other allied health area.

Career Opportunities

There has never been a better time to pursue a career in public health. It is an exciting and growing field of study and a diverse and dynamic profession. It is filled with rewards associated with the pursuit of serving others. The development and delivery of population-based prevention programs will be the key to major advances in health improvement in the 21st century. Public health will continue to be called upon to monitor and assess health problems, prevent and control diseases and injuries, and protect the health of communities and worksites from various environmental and occupational risks associated with man-made and natural disasters and emergencies.

Public health graduates are qualified to work in governmental health agencies on the local, state, federal, and international levels. Private-sector employment can be found in a variety of businesses, community health agencies, managed care organizations, hospitals, clinics, research institutes, voluntary health agencies, and non-governmental organizations. Opportunities for employment in public health are readily available, but recruiters will not typically come to campus to hire graduates. This means graduates must be organized and proactive in their career planning. Students can increase the likelihood of obtaining a position by balancing classroom activities with voluntary or paid service to public health agencies. Obtaining certifications related to specific tracks within the major and careful development of a professional portfolio enhance employment opportunities.

While there are many specialties or disciplines in public health, most career opportunities are found within the fields represented by the emphases in the major. Entry-level salaries with a bachelor's degree in public health will range from approximately $35,000–$60,000 but will vary significantly depending upon the specific discipline, type of organization, and geographic location.

Program Requirements | View MAP | View Program Outcomes

1. Complete the following courses:

HLTH 100 : Introduction to Public Health. (1:1:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Introduction to public health professions including exploration of current issues, job opportunities, the essential public health services, and an overview of the public health major.

Course Outcomes
- 1. Identify key events in the history of public health that have shaped the current state of the profession
- 2. Describe core public health values
- 3. Identify the ten essential public health services and describe which aspects of the profession hold the most relevance for employment and personal fulfillment
- 4. Delineate how health is defined and measured as well as recognize the impact of social, environmental, and behavioral determinants of health
- 5. Describe the importance of global health and recognize how actions in the US impact the rest of the world and vice versa
- 6. Identify the critical roles and contributions of epidemiology, environmental/occupational health, health promotion, medicine, and allied health within the public health profession
- 7. Determine their interest in the public health degree and identify the types of professional and educational opportunities available to them within public health

HLTH 310 : Chronic Diseases: Prevention and Control. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Pathogenesis, epidemiology of major chronic diseases, health costs to society, at-risk populations,

population-based prevention, and related best-practice interventions.

Course Outcomes
There are no course outcomes available

HLTH 311 : Infectious Diseases: Prevention and Control. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Human infectious disease risk factors; bacterial, viral, and parasitic agents; pathology, diagnosis, treatment, prevention, and control; communicable, vector-borne, zoonotic, and bioterror diseases of public health.

Course Outcomes
There are no course outcomes available

HLTH 322 : Environmental Health. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: HIth 100.

DESCRIPTION: Environmental factors as determinants of human health: ecosystem and population dynamics; biological, chemical, and physical hazards; risk assessment; economic, political, cultural, and genetic factors.

Course Outcomes
- Provide a global perspective of environmental issues impacting human health
- Describe the various biological, chemical and physical hazards of the ambient, indoor, and work environment that can adversely affect human health
- Discuss those determinents and factors that affect human health and the health of the environment
- Describe how environmental management practices may contribute to or help control emerging diseases
- Provide an assessment of those national and international health agencies, programs, and other resources that play critical roles in improving human health relative to environmental factors
- Discuss elements of policy making as they influence environmental health issues

HLTH 330 : Principles and Practices of Health Promotion. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: HIth 100.

DESCRIPTION: Introduction to the health promotion profession, emphasizing current issues, professional preparation and employment, as well as the philosophy and foundations of professional practice in various settings.

Course Outcomes
- Identify professional opportunities available to health education/health promotion specialists in community, school, worksite, and health care settings.
- Identify the roles and responsibilities for health education/health promotion specialists and opportunities for certifications and advanced study.
- Identify organizations, resources, and professional journals associated with health promotion.
- Provide an overview of theories, models, and initiatives used to guide decision-making in the planning and implementation of health promotion programs and health behavior change.
- Demonstrate awareness and sensitivity of the diverse and unique needs of various age group populations and cultural groups for health promotion.
- Identify techniques for enhancing communication in interactions with clients in health promotion settings.
- Propose health promotion solutions to address health problems among various populations.

HLTH 335 : Health Behavior Change. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: HIth 330.

DESCRIPTION: Understanding health behavior change theories for individuals and populations. Practical application of related models and theories.

Course Outcomes
- Evaluate the ability of selected socio-behavioral theories and models for furthering understanding of important public health problems and issues, with particular reference to health promotion and disease prevention.
- Identify prominent features and constructs in commonly used theories and models of health behavior change.
- Identify the important role of culture in the context of behavior change.

HLTH 345 : Principles of Epidemiology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: Stat 121.

DESCRIPTION: Applying analytical tools to study acute and chronic disease to facilitate investigation and control of epidemics.

Course Outcomes
- Investigate disease outbreaks.
- Describe basic concepts, definitions, and history of Epidemiology.
- Describe patterns of disease occurrence.
- Interpret Epidemiologic studies.
- Evaluate treatment effectiveness.
- Measure disease frequency and association.
- Distinguish between statistical association and cause-effect relationships.

Know basic design strategies in Epidemiology.

HLTH 434 : Evaluation Methods. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100 & HLTH 330

RECOMMENDED: Hlth 332, 432.

DESCRIPTION: Design and carry out an evaluation plan that will measure the impact of public health programs at changing behaviors, knowledge, attitudes, and health status. Quantitative and qualitative methods will be discussed.

NOTE: This course should be completed after taking Hlth 432--Methods in Health Promotion, and prior to taking Health 439--Program Planning.

Course Outcomes
There are no course outcomes available

HLTH 439 : Program Planning. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100 & HLTH 330; Concurrent with Hlth 434.

RECOMMENDED: Hlth 432.

DESCRIPTION: Introduction to needs assessment, program development, implementation, and evaluation in health promotion and public health.

Course Outcomes
- 1. Conduct a needs assessment by collecting and analyzing data to determine the health needs of a community
- 2. Use needs assessment data and analysis to identify a priority population for interventions.
- 3. Distinguish between goals and objectives and develop process, impact and outcome objectives.
- 4. Select, implement and manage evidence-based interventions.
- 5. Establish appropriate budgets and program timelines.
- 6. Distinguish between process and outcome evaluation and apply appropriate strategies.
- 7. Understand and interpret the DHHS'sHealthy People 2020 and the CDC's Framework for Program Evaluation in Public Health.

HLTH 447 : Introduction to Biostatistics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: HLTH 345

RECOMMENDED: Hlth 440 and Stat 121.

DESCRIPTION: Introduction to statistical concepts and analytical methods as applied to data encountered in biotechnology and biomedical sciences. Emphasis on the basic concepts of experimental design, quantitative analysis of data, and statistical inferences.

Course Outcomes
There are no course outcomes available

2. Complete three hours (50 hours per credit) of the following:

HLTH 496R : Academic Internship. (.5-9:ARR:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: HLTH 439

DESCRIPTION: Senior capstone experience.

Course Outcomes
- Obtain experience, as proctored by an approved internship supervisor, to apply professional competencies in public health as assessed through an internship report and internship supervisor rating

Note: Prior to taking Hlth 496R, the student must complete Hlth 100, 310, 330, 434, and 439.

Note: Internships may have a combination of mentored public health practice experience, research, and/or humanitarian service elements.

3. Complete one of the following chemistry options:

Either

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes
- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge

base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

Course Outcomes

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

Course Outcomes

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

Or

CHEM 111 : Principles of Chemistry. (4:3:3)

OFFERED: Honors also.

WHEN TAUGHT: Fall

PREREQUISITE: Math 110 or equivalent.

RECOMMENDED: High school chemistry, physics, and introductory calculus or concurrent enrollment in Math 112.

DESCRIPTION: Stoichiometry, kinetic-molecular theory, thermodynamics, states of matter, solutions and equilibria, electrochemistry, structure and bonding, chemical reactions, kinetics.

NOTE: Tutorial included.

Course Outcomes

- Students will demonstrate the ability to use valence shell and molecular orbital models of bonding to predict molecular shapes, reactivity, and spectroscopic properties.
- Students will be able to apply the kinetic theory of gases, including properties of ideal gases and interactions that lead to non-ideal behavior, to predict gas behavior with varied temperature, pressure and volume.
- Students will demonstrate the ability to use core concepts of chemical thermodynamics, with emphasis on the first and second laws, to predict physical changes and reaction outcomes based on Gibbs energies.
- Students will be able to apply concepts of the quantum mechanical nature of light and matter to explain observations that originally led to the development of atomic theory.

: Honors Principles of Chemistry.

Course Outcomes

CHEM 112 : Principles of Chemistry. (3:3:2)

WHEN TAUGHT: Winter

PREREQUISITE: Chem 111 or equivalent.

DESCRIPTION: Continuation of Chem 111.

NOTE: Tutorial included.

Course Outcomes

- Students will be able to use thermodynamic principles and their application to physical and chemical equilibria to calculate entropic and enthalpic contributions to physical changes and reactions and predict equilibria given entropic and enthalpic changes.
- Students will be able to apply acid-base theory, including interactions of strong and weak acids and bases, to determination of pH values of solutions, calculating buffering capacity and performance of acid-base titrations. They will be able to use structural features of molecules to estimate acid and base strength.
- Students will demonstrate an understanding of electrochemistry in designing simple electrodes and will use reduction/oxidation potentials to characterize electrodes.
- Students will be able to apply transition state theory to reaction kinetics. Students will be able to model mathematically rates of multiple reaction types.
- Students will be able to apply the periodic nature of the elements to classify elements and identify the compositions of inorganic salts.

CHEM 113 : Introductory General Chemistry Laboratory. (2:0:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Chem 112 or concurrent enrollment (preferred).

DESCRIPTION: Principles and techniques of chemical measurements. Concepts introduced in general chemistry lecture courses reinforced.

Course Outcomes

- Perform precise quantitative measurements using volumetric glassware, analytical balances, and electrochemical and spectrophotometric instrumentation.
- Apply concepts of quantum mechanics, kinetics, equilibrium and thermodynamics taught in Chem 111 and Chem 112 to laboratory measurements.
- Apply a basic understanding of descriptive chemistry introduced in Chem 112 to the separation and classification of inorganic cations and anions.
- Record laboratory procedures and results neatly and concisely in a laboratory notebook
- Report experimental results in a manner that gives proper attention to sources of experimental error.

4. Complete the following chemistry courses:

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes

- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

Course Outcomes

- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 352 or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.

NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes

- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

(Must take 2 credit hours.)

5. Complete the following biology courses:

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.

DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

MMBIO 241 : Molecular and Cellular Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBio 240 or concurrent enrollment.

DESCRIPTION: Molecular and cellular biology techniques laboratory.

Course Outcomes

- Practice ethics and integrity by working with groups and following lab rules.*Relates to Program Learning Outcome: A commitment to professional integrity and ethical behavior consistent with themission of the university.
- Learn the basics of experimental design, how to formulate a hypothesis, what controls to use, how to interpret experimental data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Practice scientific communication through written lab questions, exams and oral presentations.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Learn molecular biology laboratory techniques through practical laboratory exercises. Techniques include, spectrophotometry,isolation of DNA and protein, quantification of DNA and protein, techniques used to purify or detect specific proteins, such aschromatography, western blot and ELISA, DNA fingerprinting, polymerase chain reaction and enzyme assays.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology.

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes

There are no course outcomes available

6. Complete one of the following biology options:

Either

PDBIO 305 : Human Physiology (with lab). (4:4:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

RECOMMENDED: A general biology course.

DESCRIPTION: Function of body organ systems.

NOTE: Not acceptable for physiology and developmental biology, biophysics, or neuroscience majors. Designed for students with basic chemistry / no molecular biology. Students with chemistry/molecular biology should take PDBio 362.

Course Outcomes

- Students will demonstrate the proper use of physiology terminology.
- Student will demonstrate a well-integrated and comprehensive understanding of the human body in health and disease.
- Students will use knowledge of cells and organ systems to solve problems related to the function of the human body.
- Students will demonstrate the necessary knowledge and skills in physiology that are required for their majors and future aspirations for graduate and professional school.
- Students will develop and demonstrate in their daily lives a deeper appreciation and respect for the human body.
- Students will demonstrate the knowledge to make informed personal (medical,ethical,and political)decisions regarding physiological concepts.

Or

PDBIO 362 : Advanced Physiology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220

DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.

NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes

- Students will manifest an understanding of how structures at the molecular level lead to properties associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

PDBIO 363 : Advanced Physiology Laboratory. (1:.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 362 or concurrent enrollment; or instructor's consent.

DESCRIPTION: Experiments and exercises in advanced physiology emphasizing human physiology. Computer simulations of muscle function, endocrine disease, and human physiology. Emphasizes problem solving and calculations.

Course Outcomes

- Students will demonstrate the skills required to properly interpret data from scientific experimentation to discover how physiological systems function.
- Students will manifest an understanding of basic physiological principles by modeling how human cells, organs, and organ systems function.
- Students will describe how interactions between human organ systems work to maintain homeostasis.

7. Complete one of the following physics options:

Either

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: High school algebra and trigonometry.

RECOMMENDED: Concurrent enrollment in Phscs 107.

DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes

There are no course outcomes available

PHSCS 107 : General Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 105 or concurrent enrollment.

DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

Course Outcomes

- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

Or

PHSCS 107 : General Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 105 or concurrent enrollment.

DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

Course Outcomes

- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Calculus or concurrent enrollment.

DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

Course Outcomes

- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

Recommended GE Courses:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

Recommended Courses:

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes

- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

PDBIO 220 : Human Anatomy (with lab). (3:2:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Structure and function of the human body. Lab included.

Course Outcomes

- Students will demonstrate an understanding of the basic microscopic underpinnings of tissue structures and be able to name them.
- Students will demonstrate a greater understanding and appreciation for the human body, it's overall design and connections to other living organisms, and what a marvelous creation it is.
- Students will be able to list the name, location, and function of each of the body's organs and organ systems.

PDBIO 325 : Tissue Biology (with lab). (3:2:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120 & PDBIO 220

DESCRIPTION: Human anatomy and histology; function of cells in tissue; early stages of embryology.

NOTE: Course should be taken during a student's second or third year and before courses in physiology and developmental biology.

Course Outcomes

- Students will be able to communicate with health professionals effectively regarding tissue/organ anatomy and physiology in instances of health and disease.
- Students will demonstrate how the relationship between cell organization and cell function correlates with normal and pathological organ behavior.
- Students will be able to describe anatomical and physiological characteristics of epithelial, connective, nervous, and muscular tissue.

PDBIO 360 : Cell Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Fundamentals of cell structure and function with reference to analytical methods used by cell biologists. Practice in designing, executing, and interpreting relative experiments.

Course Outcomes

- Students will demonstrate knowledge of the molecular architecture of the nucleus, including the nuclear envelope, nucleoplasm and nucleolus, chromatin, and the nuclear pore.
- Students will demonstrate an understanding of protein transport, including nuclear import and export and vesicular transport through the secretory and sorting pathways.
- Students will demonstrate knowledge of the molecular and cellular structure and dynamics of cytoskeletal systems.
- Students will be able to apply the basic cell biological principles in outcomes 1-3 to more complicated cellular processes, including cell adhesion, cell migration, cell polarity, cell division, cancer, and development.
- Students will demonstrate the ability to generate hypothesis about how cell biological systems work at the molecular level and design experiments that test that hypothesis.
- Students will demonstrate competence in interpreting original raw data from cell biology experiments, including microscopy, protein biochemistry, molecular biology, and genetics strategies
- Students will demonstrate the ability to critically evaluate primary cell biology literature, including the ability to evaluate the design and interpretation of experimental data.

PDBIO 365 : Pathophysiology. (4:4:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 305; or PDBIO 362

DESCRIPTION: Variations in physiological mechanisms that account for development of common disturbances in normal control and activities of body's organs and organ systems.

Course Outcomes

- Students will exhibit an integrative understanding of the biochemistry, molecular biology, genetics, cell biology, microbiology, environmental biology, and physiology related to the prevention, development, and treatment of common diseases.
- Students will demonstrate through case study analysis a command of problem solving skills related to the diagnosis and treatment of pathophysiological conditions.
- Pupils will manifest a command of the physiology and pathophysiological vocabulary necessary to effectively communicate with other biomedical professionals and the general public.
- Students will be able to articulate the ethical issues related to the treatment and prevention of pathophysiological conditions.
- Students will manifest an increase in their respect for the human body and adopt a life style consistent with this respect.

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 105 or equivalent.

RECOMMENDED: Concurrent enrollment in Phscs 108.

DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes

There are no course outcomes available

PHSCS 108 : General Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 106 or concurrent enrollment

DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

Course Outcomes

- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in

quantitative terms. Extensive practice in problem solving.

Course Outcomes

- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

MCAT Prep Course (if taking MCAT)

*Hours include courses that may fulfill university core requirements.

BS in School Health Education (75–80 hours, including licensure hours)

Show All Course Descriptions
Hide All Course Descriptions

This major is designed to prepare students to teach in public schools. In order to graduate with this major, students are required to complete Utah State Office of Education licensing requirements. To view these requirements go to http://education.byu.edu/ess/licensing.html or contact Education Student Services, 120 MCKB, (801) 422-3426.

The Discipline

The health teaching major prepares students to become health educators in secondary schools. Curriculum development, instructional methods, acquisition and evaluation of resources, and assessment are among the skills required. Health educators teach decision making and effective communication, addressing such areas of concern as substance abuse and addictive behaviors, human sexuality, chronic disease, nutrition, consumer advocacy, emergency care, and injury prevention.

Adolescence is a time where habits are being established and attitudes are being formed that will influence people the rest of their lives. The health educator plays an important role in teaching knowledge and skills that will enable young people to cope and to flourish in healthy ways in an ever-changing society.

Career Opportunities

Graduates seek careers teaching health in the secondary schools in combination with a chosen minor. With an advanced degree, career teaching positions at institutions of higher learning become available.

Program Requirements | View MAP | View Program Outcomes

1. Grades below C- in professional education courses or content courses will not be accepted in the teaching major or teaching minor. Teacher candidates must have a cumulative 2.85 GPA in teaching major and teaching minor courses to qualify for student teaching.
2. An approved teaching minor must be completed (approximately 16-21 hours).
3. Complete the following:

HLTH 310 : Chronic Diseases: Prevention and Control. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Pathogenesis, epidemiology of major chronic diseases, health costs to society, at-risk populations, population-based prevention, and related best-practice interventions.

Course Outcomes
There are no course outcomes available

HLTH 320 : Advanced First Aid and Safety. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: In-depth coverage of first aid procedures for injuries and sudden illness. Leads to first aid and CPR certifications.

Course Outcomes
- Demonstrate the skills involving cardiopulmonary rescuitation (CPR), automated external defibrillation (AED), bandaging, and splinting.
- Identify the importance of first aid and emergency care
- Recognize specific emergency problems (i.e., heart attack, fracture, open wound, burn insect sting) through their signs and symptoms.
- Identify the decisions involved during an emergency.
- Describe proper first aid and emergency care procedures for specific emergency problems.

HLTH 335 : Health Behavior Change. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
RECOMMENDED: Hlth 330.
DESCRIPTION: Understanding health behavior change theories for individuals and populations. Practical application of related models and theories.

Course Outcomes

- Evaluate the ability of selected socio-behavioral theories and models for furthering understanding of important public health problems and issues, with particular reference to health promotion and disease prevention.
- Identify prominent features and constructs in commonly used theories and models of health behavior change.
- Identify the important role of culture in the context of behavior change.

HLTH 383 : Mind/Body Health. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Theories and research on the effect of emotions and attitudes on health: how negative emotions increase disease susceptibility and positive emotions encourage immune strength, health, and healing. Behavioral medicine and complementary and alternative health practices also presented.

Course Outcomes

- Identify and understand the connection between mental processes/beliefs and how they contribute to chronic and infectious disease.(Learning activities: lecture, class discussion, group presentations, videos)
- Identify and evaluate the behavioral, social, and cultural thought processes that contribute to disease. (Learning activities: lecture, class discussion, research study reviews, exams)

HLTH 420 : Injury and Violence Prevention. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100

DESCRIPTION: Concepts and interventions related to both unintentional injuries and violence.

Course Outcomes

- Describe the impact of injures on health and on society in terms of mortality, morbidity, disability, and cost.
- Define the terms used in the injury prevention field.
- Describe the models used to analyze injuries and determine interventions.
- Select valid sources of injury prevention information.
- Select and recommend proven and effective injury prevention interventions.

HLTH 436 : Sexuality Education in the Curriculum. (3:3:0)

WHEN TAUGHT: Fall; Spring

DESCRIPTION: Preparing prospective teachers to teach sexuality education related to health curricula. Maturation, family health issues, parenthood, interpersonal skills, and related pedagogy issues.

Course Outcomes

- By the end of this course, each student will address and resolve concerns related to sexuality education and the promotion of sexual health in a caring, professional, and competent manner.
- By the end of this course, each student will demonstrate a mastery of the content knowledge necessary to teach sexuality education in professional settings.
- By the end of this course, each student will be familiar with the rules and regulations for sexuality education in Utah's public schools.
- By the end of this course, each student will demonstrate an understanding of sexuality education research related to a specific area of their intended professional service.
- By the end of this course, each student will demonstrate an understanding of sexuality education information related to a specific area of thier intended professional service.

HLTH 460 : Substance Abuse and Addictive Behavior. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Physiological, psychological, sociological, and legal implications of drug use and addictive behaviors, emphasizing nature, cause, treatment, and prevention.

Course Outcomes

- Explain substance use and abuse from a multidisciplinary perspective.
- List and describe specific social policies that reduce alcohol, tobacco, and other drug use.
- Explain the major social determinants and predictors of substance use in the United States.
- Explain the biological basis of drug addiction.
- Describe the health problems and risk associated with specific drugs.
- Describe the marketing, public relations, and political activities of the tobacco and alcohol industries.
- Provide the descriptive epidemiology of substance abuse in the United States.

NDFS 100 : Essentials of Human Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Food-oriented study of nutritional facts and principles as a basis for dietary choices; consequences of choices; scientifically examining controversial topics.

Course Outcomes

- Apply the scientific method to identify and interpret credible nutrition information.
- Identify, interpret, and apply nutrition information.
- Identify functions of nutrients and their major food sources.

4. Complete six hours from the following:

HLTH 311 : Infectious Diseases: Prevention and Control. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Human infectious disease risk factors; bacterial, viral, and parasitic agents; pathology, diagnosis, treatment, prevention, and control; communicable, vector-borne, zoonotic, and bioterror diseases of public health.

Course Outcomes
There are no course outcomes available

HLTH 322 : Environmental Health. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: HIth 100.

DESCRIPTION: Environmental factors as determinants of human health: ecosystem and population dynamics; biological, chemical, and physical hazards; risk assessment; economic, political, cultural, and genetic factors.

Course Outcomes
- Provide a global perspective of environmental issues impacting human health
- Describe the various biological, chemical and physical hazards of the ambient, indoor, and work environment that can adversely affect human health
- Discuss those determinents and factors that affect human health and the health of the environment
- Describe how environmental management practices may contribute to or help control emerging diseases
- Provide an assessment of those national and international health agencies, programs, and other resources that play critical roles in improving human health relative to environmental factors
- Discuss elements of policy making as they influence environmental health issues

HLTH 403R : Health Problems Workshop. (.5-5:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Summer

Course Outcomes
- Reflect a focused analysis of readings and conduct applied projects for a special readings topic important to public health.

HLTH 450 : Women's Health Issues. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Overview of selected health topics affecting women's health status. Primary emphasis on steps to enhance personal health and fulfill divine roles from childhood through adulthood.

Course Outcomes
- Identify and understand the determinants of women's health issues.(Learning activities: lecture, class discussion, videos, out of class activites, guest lecturers)
- Identify and report on specific chronic and infectious diseases that affect women.(Learning activities: lecture, class discussion, book review, guest lecture)
- Identify ways to improve women's health using a variety of assessment sources.(Learning activities: lecture, class discussion, review of CDC and other health statistics, interviews, guest lecture)

5. Complete the Professional Education Component:
   - Complete the following:

CPSE 402 : Educating Students with Disabilities in Secondary Classrooms. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Sc Ed 350 or concurrent enrollment; Sc Ed 276R or comparable major course; FBI fingerprint background clearance.

DESCRIPTION: Issues, policies, and methods in teaching secondary students with disabilities in general education classrooms. Lab.

Course Outcomes
- Demonstrate sensitivity to individuals with disabilities.
- Describe the effects of cultural, ethnic, and language diversity on the education of individuals with disabilities
- Describe the steps in the Individual Education Program (IEP) process, including Individualized Transition Plans for students aged 14-22.
- Use research-supported methods for academic instruction of individuals with disabilities including explicit instruction, learning strategies, task analysis, and active participation.
- Describe models and strategies of consultation and collaboration including co-planning and co-teaching.
- Define special education and describe the legal structure of services for individuals with disabilities, including the Individuals with Disabilities Education Act (IDEA).
- Develop a personal philosophy of special education which includes an understanding of the implications of Least Restrictive Environment as defined in IDEA.
- Demonstrate knowledge of basic classroom management theories and an understanding of teacher attitudes and behaviors that influence behavior of individuals with exceptional learning needs.
- Describe the characteristics and educational implications of students with high and low incidence disabilities
- Demonstrate ability to identify and prioritize areas of the general curriculum and provide accommodations for individuals with exceptional learning needs

HLTH 276R : Exploration of Teaching. (3:ARR:ARR)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: FBI fingerprint and background clearance; major area preadmission requirements.

DESCRIPTION: Field-based initial teaching experience directed at helping prospective teachers experience demands and opportunities associated with teaching secondary students.

Course Outcomes

- Complete the BYU educator preparation admission requirements (Transition 1) including: mandatory orientation, LiveText registration, Student Field Experience Demographics (FED), Technology Skills Assessment (TSA), Professional & Interpersonal Behavior Scale (PIBS), Dispositional Scale: Self-Assessment, and Graduation Plan.
- Identify the moral dimensions of education and the requirements for the Teacher Work Sample (TWS). Write a Contextual Factors for a school observed.
- Demonstrate familiarity with the Utah State health education core curriculum framework, the National Health Education Standards, the CDC's six categories of risk behavior and principles of effective instruction in the 21st Century.
- Identify, observe, and reflect upon the characteristics, behaviors, skills, routines, and practices of effective health
- Evaluate personal and professional dispositions, strengths and weaknesses relevant to teaching health education at the secondary level.

HLTH 381 : School Health Education Methods and Curriculum A. (3:2.5:0)

WHEN TAUGHT: Fall

PREREQUISITE: HLTH 276R

DESCRIPTION: Part A of methods and curriculum preparation; effective implementation of instruction related to substance abuse prevention, safety and injury prevention, and reproductive health for secondary students; unit and lesson planning, assessment of learner performance; practice teaching.

Course Outcomes

- Identify and apply teaching resources, national and state standards, and state frameworks for teaching health education.
- Identify and apply strategies for creating classroom environments conducive to optimal learning and emotional well-being.
- Identify health risks, concerns, and challenges confronting school-age youth and develop teaching materials for helping strategies.
- Identify and experiment with a variety of instructional strategies and teaching methods to enhance health teaching including those that emphasize active learning and skill development.
- Evaluate possible teaching methods and select the best method(s) to use when teaching specific health content areas.
- Apply a systematic instructional design process to lesson planning that utilizes Teacher Work Sample steps and provides sufficient detail and clarity for other educators to teach the lesson plan as designed and intended.

HLTH 382 : School Health Education Methods and Curriculum B. (3:2.5:0)

WHEN TAUGHT: Winter

PREREQUISITE: HLTH 276R

DESCRIPTION: Part B of methods and curriculum preparation; effective implementation of instruction related to mental and emotional health, nutrition and fitness, and disease prevention for secondary students; unit and lesson planning, assessment of learner performance; practice teaching.

Course Outcomes

- Create a semester outline, unit maps, and lesson plans for a secondary school health education course based upon National School Health Education Standards and the Utah State Office of Education Core Curriculum.
- Know and demonstrate effective characteristics of health education.
- Demonstrate professionalism in conduct, character, collaboration, and attitude.
- Qualify for student teaching field experience by completing a practicum and Teacher Work Sample, passing the Praxis exam, and successfully completing a student teaching application.

IP&T 286 : Instructional Technology in Teaching. (1:1:ARR)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Using instructional design, visual design, and differentiated staffing principles along with multimedia authoring systems, telecommunication, and other computer-based tools in the development of educational applications for secondary education settings.

Course Outcomes

There are no course outcomes available

SC ED 350 : Adolescent Development in an Education Context. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Sc Ed 276R or Phy S 276 or Engl 276R or Bio 276 or SFL 276R or HIth 276R or MthEd 276 or PETE 276R or TEE 276A or TEE 276B.

DESCRIPTION: Adolescent development and its implications for integrated school culture, curriculum design, instructional practices, and assessment.

Course Outcomes

- The students will demonstrate how the stages of development impact instructional practices.

The students will understand the social, physical, and cognitive developmental stages of adolescence in relation to the tasks of automony, identity and intimacy.
- The students will demonstrate how the stages of development impact classroom environments and management.

SC ED 353 : Multicultural Education. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Sc Ed 350 or concurrent enrollment; Sc Ed 276R or Phy S 276 or Engl 276R or Bio 276 or SFL 276R or Hlth 276R or MthEd 276 or PETE 276R or TEE 276A or TEE 276B.

DESCRIPTION: Designing and adapting instruction for diverse learners; collaborating with families, cultures, and communities in promoting and sustaining learning.

Course Outcomes
- Students will examine and understand the various dimensions of cultural identity, including one's own, and apply this knowledge to their thinking and behavio through a process of reflection.
- Acknowledge the dynamics of culture and diversity in school success and teachers' teaching. This includes recognizing and overcoming deficit thinking.
- Identify culturally and linguistically relevant pedagogy and use theoretically grounded principles to analyze why it is effective for many different types of learners.
- Interpret the historical context of diversity, discrimination, and language policies and evaluate how they impact current school practices.
- Recognize and acknowledge racism, discrimination and other forms of inquity and privilege in themselves, in others, and within institutions.
- Recognize and use a personal moral spiritual framework along with principles and concepts of social science to guide educational accomplishments for diverse learners.

SC ED 379 : Classroom Management. (1:1:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Concurrent enrollment in Sc Ed 377R and 378, or equivalent major courses; Sc Ed 276R or Phy S 276 or Engl 276R or Bio 276 or SFL 276R or Hlth 276R or MthEd 276 or PETE 276R or TEE 276A or TEE 276B.

DESCRIPTION: Current theory, research, and application in classroom management; creating positive teacher-student and peer relationships; developing optimal learning environments.

Course Outcomes
- The student will create a learning environment that encourages positive social interaction, active engagement in learning, and self-motivation.
- The student will plan instruction based upon knowledge of subject matter, students, the community, and curriculum goals.
- The student will be a reflective practitioner who continually evaluates the effects of his or her choices, and who actively seeks out opportunities to grow professionally.

Note 1: Hlth 276R is a prerequisite to Hlth 381, 421.

Note 2: FBI fingerprint and background clearance must be completed prior to enrollment in Hlth 276R.

- Complete 12 hours of one of the following:

HLTH 476 : Secondary Student Teaching. (12:Arr.:Arr.)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Completion of course work or department approval; requires a major GPA of 2.85; at least a C- in Hlth 421.

DESCRIPTION: Capstone, field-based, semester-long experience in teaching secondary students; demonstrating proficiency in all program standards. Seminar required.

Course Outcomes
- Successful completion of TWS sections 1-7.
- Successful completion of a year long internship or 14 week student teaching placement.
- University Supervisor and Mentor Teacher CPAS scores of 3 or higher on each of the the 10 CPAS principles.
- Completion of the Praxis exam.
- Completion of the PIBS university supervisor assessment.Completion of the PIBS self-assessment.

SC ED 496R : Academic Internship: Secondary Education. (12:ARR:ARR)

WHEN TAUGHT: Fall

PREREQUISITE: Completion of all course work or departmental approval; requires a major GPA of 2.85; at least a C- in Sc Ed 377; FBI fingerprint and background clearance.

DESCRIPTION: Capstone, field-based, year-long experience in teaching secondary students; demonstrating proficiency in all program standards. Seminar required.

Course Outcomes
- Students will demonstrate that they can teach, manage, and assess content area knowledge and skills in the 7-12 classroom.
- Foster relationships with school colleagues, parents, and the larger community.

This minor is designed to prepare students to teach in public schools. A teaching minor may only be received by students graduating with a teaching major. In order to graduate with this minor, students are required to complete Utah State Office of Education licensing requirements. To view these requirements go to http://education.byu.edu/ess/licensing.html or contact Education Student Services, 120 MCKB, (801) 422-3426.

Program Requirements | View MAP

1. Grades below C- in professional education courses or content courses will not be accepted in the teaching major or teaching minor. Teacher candidates must have a cumulative 2.85 GPA in teaching major and teaching minor courses to qualify for student teaching.

2. Complete the following:

HLTH 310 : Chronic Diseases: Prevention and Control. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Pathogenesis, epidemiology of major chronic diseases, health costs to society, at-risk populations, population-based prevention, and related best-practice interventions.

Course Outcomes
There are no course outcomes available

HLTH 381 : School Health Education Methods and Curriculum A. (3:2.5:0)

WHEN TAUGHT: Fall

PREREQUISITE: HLTH 276R

DESCRIPTION: Part A of methods and curriculum preparation; effective implementation of instruction related to substance abuse prevention, safety and injury prevention, and reproductive health for secondary students; unit and lesson planning, assessment of learner performance; practice teaching.

Course Outcomes
- Identify and apply teaching resources, national and state standards, and state frameworks for teaching health education.
- Identify and apply strategies for creating classroom environments conducive to optimal learning and emotional well-being.
- Identify health risks, concerns, and challenges confronting school-age youth and develop teaching materials for helping strategies.
- Identify and experiment with a variety of instructional strategies and teaching methods to enhance health teaching including those that emphasize active learning and skill development.
- Evaluate possible teaching methods and select the best method(s) to use when teaching specific health content areas.
- Apply a systematic instructional design process to lesson planning that utilizes Teacher Work Sample steps and provides sufficient detail and clarity for other educators to teach the lesson plan as designed and intended.

HLTH 382 : School Health Education Methods and Curriculum B. (3:2.5:0)

WHEN TAUGHT: Winter

PREREQUISITE: HLTH 276R

DESCRIPTION: Part B of methods and curriculum preparation; effective implementation of instruction related to mental and emotional health, nutrition and fitness, and disease prevention for secondary students; unit and lesson planning, assessment of learner performance; practice teaching.

Course Outcomes
- Create a semester outline, unit maps, and lesson plans for a secondary school health education course based upon National School Health Education Standards and the Utah State Office of Education Core Curriculum.
- Know and demonstrate effective characteristics of health education.
- Demonstrate professionalism in conduct, character, collaboration, and attitude.
- Qualify for student teaching field experience by completing a practicum and Teacher Work Sample, passing the Praxis exam, and successfully completing a student teaching application.

HLTH 436 : Sexuality Education in the Curriculum. (3:3:0)

WHEN TAUGHT: Fall; Spring

DESCRIPTION: Preparing prospective teachers to teach sexuality education related to health curricula. Maturation, family health issues, parenthood, interpersonal skills, and related pedagogy issues.

Course Outcomes

- By the end of this course, each student will address and resolve concerns related to sexuality education and the promotion of sexual health in a caring, professional, and competent manner.
- By the end of this course, each student will demonstrate a mastery of the content knowledge necessary to teach sexuality education in professional settings.
- By the end of this course, each student will be familiar with the rules and regulations for sexuality education in Utah's public schools.
- By the end of this course, each student will demonstrate an understanding of sexuality education research related to a specific area of their intended professional service.
- By the end of this course, each student will demonstrate an understanding of sexuality education information related to a specific area of thier intended professional service.

HLTH 460 : Substance Abuse and Addictive Behavior. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Physiological, psychological, sociological, and legal implications of drug use and addictive behaviors, emphasizing nature, cause, treatment, and prevention.

Course Outcomes

- Explain substance use and abuse from a multidisciplinary perspective.
- List and describe specific social policies that reduce alcohol, tobacco, and other drug use.
- Explain the major social determinants and predictors of substance use in the United States.
- Explain the biological basis of drug addiction.
- Describe the health problems and risk associated with specific drugs.
- Describe the marketing, public relations, and political activities of the tobacco and alcohol industries.
- Provide the descriptive epidemiology of substance abuse in the United States.

NDFS 100 : Essentials of Human Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Food-oriented study of nutritional facts and principles as a basis for dietary choices; consequences of choices; scientifically examining controversial topics.

Course Outcomes

- Apply the scientific method to identify and interpret credible nutrition information.
- Identify, interpret, and apply nutrition information.
- Identify functions of nutrients and their major food sources.

3. Complete three hours from the following:

HLTH 320 : Advanced First Aid and Safety. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: In-depth coverage of first aid procedures for injuries and sudden illness. Leads to first aid and CPR certifications.

Course Outcomes

- Demonstrate the skills involving cardiopulmonary rescuitation (CPR), automated external defibrillation (AED), bandaging, and splinting.
- Identify the importance of first aid and emergency care
- Recognize specific emergency problems (i.e., heart attack, fracture, open wound, burn insect sting) through their signs and symptoms.
- Identify the decisions involved during an emergency.
- Describe proper first aid and emergency care procedures for specific emergency problems.

HLTH 335 : Health Behavior Change. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: HIth 330.

DESCRIPTION: Understanding health behavior change theories for individuals and populations. Practical application of related models and theories.

Course Outcomes

- Evaluate the ability of selected socio-behavioral theories and models for furthering understanding of important public health problems and issues, with particular reference to health promotion and disease prevention.
- Identify prominent features and constructs in commonly used theories and models of health behavior change.
- Identify the important role of culture in the context of behavior change.

HLTH 420 : Injury and Violence Prevention. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100

DESCRIPTION: Concepts and interventions related to both unintentional injuries and violence.

Course Outcomes

- Describe the impact of injures on health and on society in terms of mortality, morbidity, disability, and cost.

- Define the terms used in the injury prevention field.
- Describe the models used to analyze injuries and determine interventions.
- Select valid sources of injury prevention information.
- Select and recommend proven and effective injury prevention interventions.

HLTH 100 : Introduction to Public Health. (1:1:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Introduction to public health professions including exploration of current issues, job opportunities, the essential public health services, and an overview of the public health major.

Course Outcomes

- 1. Identify key events in the history of public health that have shaped the current state of the profession
- 2. Describe core public health values
- 3. Identify the ten essential public health services and describe which aspects of the profession hold the most relevance for employment and personal fulfillment
- 4. Delineate how health is defined and measured as well as recognize the impact of social, environmental, and behavioral determinants of health
- 5. Describe the importance of global health and recognize how actions in the US impact the rest of the world and vice versa
- 6. Identify the critical roles and contributions of epidemiology, environmental/occupational health, health promotion, medicine, and allied health within the public health profession
- 7. Determine their interest in the public health degree and identify the types of professional and educational opportunities available to them within public health

200-Level Courses

HLTH 201 : Contemporary Issues for Student Athletes. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Eligibility issues for intercollegiate student athletes. Skills relating to academic performance and career selection.

Course Outcomes

- Orient new freshman student-athletes to BYU and the resources available for them in the Student Athlete Academic Center.
- Learn basics life skills that will enhance the BYU experience of each student-athlete and prepare them for life after college.
- Learn the basic principles and skills of sport psychology that will enhance performance.
- Gain a better understanding of sports nutrition and its impact on performance.
- Experience the positive benefits of serving in the community.

HLTH 276R : Exploration of Teaching. (3:ARR:ARR)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: FBI fingerprint and background clearance; major area preadmission requirements.

DESCRIPTION: Field-based initial teaching experience directed at helping prospective teachers experience demands and opportunities associated with teaching secondary students.

Course Outcomes

- Complete the BYU educator preparation admission requirements (Transition 1) including: mandatory orientation, LiveText registration, Student Field Experience Demographics (FED), Technology Skills Assessment (TSA), Professional & Interpersonal Behavior Scale (PIBS), Dispositional Scale: Self-Assessment, and Graduation Plan.
- Identify the moral dimensions of education and the requirements for the Teacher Work Sample (TWS). Write a Contextual Factors for a school observed.
- Demonstrate familiarity with the Utah State health education core curriculum framework, the National Health Education Standards, the CDC's six categories of risk behavior and principles of effective instruction in the 21st Century.
- Identify, observe, and reflect upon the characteristics, behaviors, skills, routines, and practices of effective health
- Evaluate personal and professional dispositions, strengths and weaknesses relevant to teaching health education at the secondary level.

300-Level Courses

HLTH 310 : Chronic Diseases: Prevention and Control. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Pathogenesis, epidemiology of major chronic diseases, health costs to society, at-risk populations, population-based prevention, and related best-practice interventions.

Course Outcomes
There are no course outcomes available

HLTH 311 : Infectious Diseases: Prevention and Control. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Human infectious disease risk factors; bacterial, viral, and parasitic agents; pathology, diagnosis, treatment, prevention, and control; communicable, vector-borne, zoonotic, and bioterror diseases of public health.

Course Outcomes
There are no course outcomes available

HLTH 320 : Advanced First Aid and Safety. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: In-depth coverage of first aid procedures for injuries and sudden illness. Leads to first aid and CPR certifications.

Course Outcomes
- Demonstrate the skills involving cardiopulmonary rescuitation (CPR), automated external defibrillation (AED), bandaging, and splinting.
- Identify the importance of first aid and emergency care
- Recognize specific emergency problems (i.e., heart attack, fracture, open wound, burn insect sting) through their signs and symptoms.
- Identify the decisions involved during an emergency.
- Describe proper first aid and emergency care procedures for specific emergency problems.

HLTH 322 : Environmental Health. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: Hlth 100.

DESCRIPTION: Environmental factors as determinants of human health: ecosystem and population dynamics; biological, chemical, and physical hazards; risk assessment; economic, political, cultural, and genetic factors.

Course Outcomes
- Provide a global perspective of environmental issues impacting human health
- Describe the various biological, chemical and physical hazards of the ambient, indoor, and work environment that can adversely affect human health
- Discuss those determinents and factors that affect human health and the health of the environment
- Describe how environmental management practices may contribute to or help control emerging diseases
- Provide an assessment of those national and international health agencies, programs, and other resources that play critical roles in improving human health relative to environmental factors
- Discuss elements of policy making as they influence environmental health issues

HLTH 330 : Principles and Practices of Health Promotion. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: Hlth 100.

DESCRIPTION: Introduction to the health promotion profession, emphasizing current issues, professional preparation and employment, as well as the philosophy and foundations of professional practice in various settings.

Course Outcomes
- Identify professional opportunities available to health education/health promotion specialists in community, school, worksite, and health care settings.
- Identify the roles and responsibilities for health education/health promotion specialists and opportunities for certifications and advanced study.
- Identify organizations, resources, and professional journals associated with health promotion.
- Provide an overview of theories, models, and initiatives used to guide decision-making in the planning and implementation of health promotion programs and health behavior change.
- Demonstrate awareness and sensitivity of the diverse and unique needs of various age group populations and cultural groups for health promotion.
- Identify techniques for enhancing communication in interactions with clients in health promotion settings.
- Propose health promotion solutions to address health problems among various populations.

HLTH 332 : Technology in Health Promotion. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Application of computer software and electronic communication technologies in health promotion.

Course Outcomes
There are no course outcomes available

HLTH 335 : Health Behavior Change. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: Hlth 330.

DESCRIPTION: Understanding health behavior change theories for individuals and populations. Practical application of related models and theories.

Course Outcomes

- Evaluate the ability of selected socio-behavioral theories and models for furthering understanding of important public health problems and issues, with particular reference to health promotion and disease prevention.
- Identify prominent features and constructs in commonly used theories and models of health behavior change.
- Identify the important role of culture in the context of behavior change.

HLTH 345 : Principles of Epidemiology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: Stat 121.

DESCRIPTION: Applying analytical tools to study acute and chronic disease to facilitate investigation and control of epidemics.

Course Outcomes

- Investigate disease outbreaks.
- Describe basic concepts, definitions, and history of Epidemiology.
- Describe patterns of disease occurrence.
- Interpret Epidemiologic studies.
- Evaluate treatment effectiveness.
- Measure disease frequency and association.
- Distinguish between statistical association and cause-effect relationships.
- Know basic design strategies in Epidemiology.

HLTH 361 : School Health for Elementary Teachers. (2:2:0)

DESCRIPTION: Preparing for the role as a health educator, emphasizing skill-based teaching methods and acquisition of teaching resources.

Course Outcomes

- 1. Students will demonstrate a sound understanding of health education content included in the Utah State Core Curriculum.
- 1. Students will integrate the Utah State Core Curriculum for elementary health instruction into their 9-month teaching calendar.
- 1. Students will demonstrate a variety of methods for teaching the Utah State Core Curriculum for elementary health instruction.
- 1. Students will apply key health education practices and principles.

HLTH 381 : School Health Education Methods and Curriculum A. (3:2.5:0)

WHEN TAUGHT: Fall

PREREQUISITE: HLTH 276R

DESCRIPTION: Part A of methods and curriculum preparation; effective implementation of instruction related to substance abuse prevention, safety and injury prevention, and reproductive health for secondary students; unit and lesson planning, assessment of learner performance; practice teaching.

Course Outcomes

- Identify and apply teaching resources, national and state standards, and state frameworks for teaching health education.
- Identify and apply strategies for creating classroom environments conducive to optimal learning and emotional well-being.
- Identify health risks, concerns, and challenges confronting school-age youth and develop teaching materials for helping strategies.
- Identify and experiment with a variety of instructional strategies and teaching methods to enhance health teaching including those that emphasize active learning and skill development.
- Evaluate possible teaching methods and select the best method(s) to use when teaching specific health content areas.
- Apply a systematic instructional design process to lesson planning that utilizes Teacher Work Sample steps and provides sufficient detail and clarity for other educators to teach the lesson plan as designed and intended.

HLTH 382 : School Health Education Methods and Curriculum B. (3:2.5:0)

WHEN TAUGHT: Winter

PREREQUISITE: HLTH 276R

DESCRIPTION: Part B of methods and curriculum preparation; effective implementation of instruction related to mental and emotional health, nutrition and fitness, and disease prevention for secondary students; unit and lesson planning, assessment of learner performance; practice teaching.

Course Outcomes

- Create a semester outline, unit maps, and lesson plans for a secondary school health education course based upon National School Health Education Standards and the Utah State Office of Education Core Curriculum.
- Know and demonstrate effective characteristics of health education.
- Demonstrate professionalism in conduct, character, collaboration, and attitude.
- Qualify for student teaching field experience by completing a practicum and Teacher Work Sample, passing the Praxis exam, and successfully completing a student teaching application.

HLTH 383 : Mind/Body Health. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Theories and research on the effect of emotions and attitudes on health: how negative emotions increase disease susceptibility and positive emotions encourage immune strength, health, and healing. Behavioral medicine and complementary and alternative health practices also presented.

Course Outcomes

- Identify and understand the connection between mental processes/beliefs and how they contribute to chronic

and infectious disease.(Learning activities: lecture, class discussion, group presentations, videos)
- Identify and evaluate the behavioral, social, and cultural thought processes that contribute to disease.(Learning activities: lecture, class discussion, research study reviews, exams)

400-Level Courses

HLTH 402R : Driver and Safety Education Workshop. (.5-7:0:2)

OFFERED: Independent Study also.

DESCRIPTION: Current safety education problems.

Course Outcomes

There are no course outcomes available

HLTH 403R : Health Problems Workshop. (.5-5:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Summer

Course Outcomes

- Reflect a focused analysis of readings and conduct applied projects for a special readings topic important to public health.

HLTH 420 : Injury and Violence Prevention. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100

DESCRIPTION: Concepts and interventions related to both unintentional injuries and violence.

Course Outcomes

- Describe the impact of injures on health and on society in terms of mortality, morbidity, disability, and cost.
- Define the terms used in the injury prevention field.
- Describe the models used to analyze injuries and determine interventions.
- Select valid sources of injury prevention information.
- Select and recommend proven and effective injury prevention interventions.

HLTH 422 : Disaster Response and Emergency Preparedness. (3:3:0)

WHEN TAUGHT: Fall; Winter

RECOMMENDED: Hlth 311, 420.

DESCRIPTION: Key elements of public health preparedness and response to the variety of natural, technological, and man-made disasters occurring routinely on a global basis.

Course Outcomes

There are no course outcomes available

HLTH 424 : Occupational Health and Safety. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: HLTH 100 & HLTH 322

DESCRIPTION: In-depth focus on workplace health and safety through a multidisciplinary approach to the anticipation, recognition, evaluation, and prevention and control of workplace-related illnesses and injuries.

Course Outcomes

- Demonstrate competency in using the OSHA standards by identifying specific violations of current standards.
- Describe the purpose and scope of the Occupational Health and Safety Act as well as other relevant safety and health legislation and consensus standards.
- Discuss and demonstrate the elements involved in completing an accident investigation.
- Explain how the functions of management are utilized to assure safe conditions and practices through the development of specific programs as well as an overall safety and health program.
- Identify, evaluate, and develop loss control strategies to address the hazards associated with operating common manufacturing and construction equipment and processes.

HLTH 426 : Fundamentals of Toxicology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent with Hlth 424.

RECOMMENDED: Chem 106, 107.

NOTE: Examines basic concepts of toxicology as they apply to environmental toxicology. Discusses toxicokinetics of foreign chemical agents on biological systems. Focuses on understanding and prevention of mortality and morbidity resulting from environmental exposure to toxic substances.

Course Outcomes

There are no course outcomes available

HLTH 432 : Methods in Health Promotion. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100 & HLTH 330

RECOMMENDED: Hlth 332.

DESCRIPTION: Health promotion methods, interventions, and strategies that influence behaviors and advance public health practices within communities.

Course Outcomes

- 1. Identify the six major categories of methods for public health interventions. Additionally, distinguish between interventions, methods and strategies.
- 2. Explain, justify and apply the principles that guide the selection of and implementation of public health methods and strategies to include key factors such as unique community needs, best practice, evidence and effectiveness, political expediency, and cost.
- 3. Create awareness/education messages, including media products, to influence stakeholders, policy makers and their constituents on issues of public health importance.
- 4. Design plans to engage community members and key stakeholders to become involved in appropriate mobilization, communication, and/or policy strategies.
- 5. Identify appropriate advocacy strategies to influence decision makers, or prompt policy change, at organizational and community levels.
- 6. Enhance personal advocacy, communication, oral presentation, leadership and team-building skills appropriate for health promotion practice.

HLTH 434 : Evaluation Methods. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100 & HLTH 330

RECOMMENDED: Hlth 332, 432.

DESCRIPTION: Design and carry out an evaluation plan that will measure the impact of public health programs at changing behaviors, knowledge, attitudes, and health status. Quantitative and qualitative methods will be discussed.

NOTE: This course should be completed after taking Hlth 432--Methods in Health Promotion, and prior to taking Health 439--Program Planning.

Course Outcomes

There are no course outcomes available

HLTH 436 : Sexuality Education in the Curriculum. (3:3:0)

WHEN TAUGHT: Fall; Spring

DESCRIPTION: Preparing prospective teachers to teach sexuality education related to health curricula. Maturation, family health issues, parenthood, interpersonal skills, and related pedagogy issues.

Course Outcomes

- By the end of this course, each student will address and resolve concerns related to sexuality education and the promotion of sexual health in a caring, professional, and competent manner.
- By the end of this course, each student will demonstrate a mastery of the content knowledge necessary to teach sexuality education in professional settings.
- By the end of this course, each student will be familiar with the rules and regulations for sexuality education in Utah's public schools.
- By the end of this course, each student will demonstrate an understanding of sexuality education research related to a specific area of their intended professional service.
- By the end of this course, each student will demonstrate an understanding of sexuality education information related to a specific area of thier intended professional service.

HLTH 438 : Social Marketing. (3:3:0)

WHEN TAUGHT: Spring

RECOMMENDED: Hlth 330, 332, 437.

DESCRIPTION: Social marketing, including formative research, audience analysis, segmentation, marketing mix, strategies, pretesting; application to health promotion and public health.

Course Outcomes

- Be able to develop a social marketing plan.

HLTH 439 : Program Planning. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: HLTH 100 & HLTH 330; Concurrent with Hlth 434.

RECOMMENDED: Hlth 432.

DESCRIPTION: Introduction to needs assessment, program development, implementation, and evaluation in health promotion and public health.

Course Outcomes

- 1. Conduct a needs assessment by collecting and analyzing data to determine the health needs of a community
- 2. Use needs assessment data and analysis to identify a priority population for interventions.
- 3. Distinguish between goals and objectives and develop process, impact and outcome objectives.
- 4. Select, implement and manage evidence-based interventions.
- 5. Establish appropriate budgets and program timelines.
- 6. Distinguish between process and outcome evaluation and apply appropriate strategies.
- 7. Understand and interpret the DHHS'sHealthy People 2020 and the CDC's Framework for Program Evaluation in Public Health.

HLTH 440 : Computer Applications in Epidemiology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: HLTH 345

RECOMMENDED: Stat 121.

DESCRIPTION: Introduction to the basics of SAS and EXCEL focusing on the set of commands useful for data-reporting, data-management, formatting and graphics, and data-analysis. Topics include tables and regression models for epidemiologists (cumulative-incidence, case-control, and incidence rate data).

Course Outcomes

- Identify the principles of data management.

- Describe how/when to use tables, charts and graphs for data presentation.
- Create tables, graphs and charts in Excel for presenting public health data.
- Use SAS to manipulate datasets provided by sources such as the Centers for Disease Control and Prevention.
- Use basic SAS procedures to explore, describe and analyze data, including proc contents, proc freq, proc means, proc univariate and proc print.
- Clean and recode data to prepare it for analysis using a variety of data cleaning techniques. Document all cleaning and recoding using comments in the SAS program and external documentation (code books, data dictionaries etc.).
- Create clear and documented output using labels, titles, and formats.
- Conduct basic analyses using SAS including Proc Ttest, Proc ANOVA, Proc Corr, Proc GLM and Proc Logistic.

HLTH 441 : Clinical Trials. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: HLTH 345

RECOMMENDED: Stat 121.

DESCRIPTION: Introduction to methods used in the design, interim monitoring, and analysis of clinical trials, including the impact of patient exclusions and other causes of incomplete data. Concepts and principles emphasized. Main focus on randomized Phase III (comparative) trials.

Course Outcomes

- Develop the capacity to evaluate the design, analysis, and interpretation of human studies.
- Practice the skills needed to identify research opportunities and design studies that pursue those opportunities.
- Develop the capacity for oral and written evaluation of research, as well as oral and written presentation of individual study proposals.

HLTH 442 : Special Topics in Epidemiology. (3:3:0)

WHEN TAUGHT: Winter

RECOMMENDED: Hlth 345, Stat 121.

DESCRIPTION: Topics include environmental epidemiology, statistical methods in epidemiology, social epidemiology, genetic epidemiology, categorical data analysis, applied longitudinal analysis, survival analysis, and life table methods.

Course Outcomes

- Explain the Basic Elements of Research, Exposure and Outcome Assessment
- Show how Monitoring is accomplished in Environmental Health
- Describe Epidemiologic Study Designs and explain Statistical Modeling and Causal Inference
- Explain challenges associated with investigating Disease Clusters
- Describe Mapping, Geographic Information Systems and Time Series
- Give examples of current health issues in Indoor and Ambient Air Quality
- Give examples of current health issues in Soil and Food Contaminants
- Give examples of current health issues in Water and Radiation
- Describe how Climate Change can affect Health

HLTH 443 : Field Epidemiology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: HLTH 345

RECOMMENDED: Stat 121.

DESCRIPTION: Applying epidemiologic methods, including outbreak investigation; surveillance systems and methods; and infectious disease epidemiology to unexpected health problems when a rapid on-site investigation is necessary for timely intervention.

Course Outcomes

- Be familiar with the steps of a field investigation.
- Be familiar with surveys and sampling, analyzing and interpreting data, describing and communicating the findings, dealing with the public and the media.
- Define cluster and cluster investigation methods for assessing reported clusters and discuss the process for investigating clusters. Identify the primary challenges in reported clusters.

HLTH 444 : Organization and Administration of Driver and Traffic Safety Education. (2:2:0)

DESCRIPTION: Organization, administration, and supervision of high school driver education programs.

Course Outcomes

There are no course outcomes available

HLTH 445 : Driver and Traffic Safety Education. (4:2:4)

PREREQUISITE: HLTH 444

DESCRIPTION: Prepares teachers to instruct classroom and behind-the-wheel phases of driver education.

Course Outcomes

There are no course outcomes available

HLTH 446 : Driver Simulators and Driving Ranges. (2:2:1)

DESCRIPTION: Simulator and multiple-car driving range methodology, emphasizing operation and maintenance.

Course Outcomes

There are no course outcomes available

HLTH 447 : Introduction to Biostatistics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: HLTH 345

RECOMMENDED: HIth 440 and Stat 121.

DESCRIPTION: Introduction to statistical concepts and analytical methods as applied to data encountered in biotechnology and biomedical sciences. Emphasis on the basic concepts of experimental design, quantitative analysis of data, and statistical inferences.

Course Outcomes
There are no course outcomes available

HLTH 450 : Women's Health Issues. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Overview of selected health topics affecting women's health status. Primary emphasis on steps to enhance personal health and fulfill divine roles from childhood through adulthood.

Course Outcomes
- Identify and understand the determinants of women's health issues.(Learning activities: lecture, class discussion, videos, out of class activites, guest lecturers)
- Identify and report on specific chronic and infectious diseases that affect women.(Learning activities: lecture, class discussion, book review, guest lecture)
- Identify ways to improve women's health using a variety of assessment sources.(Learning activities: lecture, class discussion, review of CDC and other health statistics, interviews, guest lecture)

HLTH 460 : Substance Abuse and Addictive Behavior. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Physiological, psychological, sociological, and legal implications of drug use and addictive behaviors, emphasizing nature, cause, treatment, and prevention.

Course Outcomes
- Explain substance use and abuse from a multidisciplinary perspective.
- List and describe specific social policies that reduce alcohol, tobacco, and other drug use.
- Explain the major social determinants and predictors of substance use in the United States.
- Explain the biological basis of drug addiction.
- Describe the health problems and risk associated with specific drugs.
- Describe the marketing, public relations, and political activities of the tobacco and alcohol industries.
- Provide the descriptive epidemiology of substance abuse in the United States.

HLTH 466 : Health and the Aging Process. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Public health strategies to promote health and functional independence in the context of the inevitable consequence of aging.

Course Outcomes
- Understand the physiological aspects of the normal aging process.
- Understand aging as a pathological process and the factors in both the external and internal milieu, this may contribute to premature aging.
- Relate knowledge about the organic and infectious diseases, common disorders, and disabilities prevalent among the elderly to disease prevention and health promotion among the aged.
- Become exposed to professional literature pertaining to the biological, medical, and health aspects of aging including the use of clinical preventive services as noted by gerontology researchers.
- Understand the physiological aspects of aging and the experimental approaches used in studying the aging process.
- Identify and distinguish the federal, state, and community health programs and services for the aged, including medical care, hospitalization, extended care, rehabilitation, and health maintenance.
- Promote healthy lifestyle behaviors that help prevent premature aging, promote the health of the elderly, and contribute to the extension of the prime of life.
- Understand decision-making related to end-of-life planning.

HLTH 476 : Secondary Student Teaching. (12:Arr.:Arr.)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Completion of course work or department approval; requires a major GPA of 2.85; at least a C- in HIth 421.

DESCRIPTION: Capstone, field-based, semester-long experience in teaching secondary students; demonstrating proficiency in all program standards. Seminar required.

Course Outcomes
- Successful completion of TWS sections 1-7.
- Successful completion of a year long internship or 14 week student teaching placement.
- University Supervisor and Mentor Teacher CPAS scores of 3 or higher on each of the the 10 CPAS principles.
- Completion of the Praxis exam.
- Completion of the PIBS university supervisor assessment.Completion of the PIBS self-assessment.

HLTH 480 : International Health. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Identifying disease patterns in "developing" countries, exploring the social and cultural context of health, and reviewing behavior change strategies for improving well-being.

Course Outcomes
- Idenitfy behaviors that improve maternal and child health and how they may be specific for particular groups.

- Discuss the determinants of global diseases and why inequalities and inequities exist.
- Explain how culture, our own and others, facilitates or hinders practicing optimal health behaviors.
- Describe the leading causes of morbidity (sickness) and mortablity among women and children in the developing world.
- Discuss how undernutrition and overnutrition contribute to morbidity and mortality related to infectious and chronic disease.
- Using principles of epidemiology, identify the leading causes of morbidity (sickness) and mortablity among women and children in the developing world and compare the burden of disease across different regions of the world.
- Describe how monitoring, evaluation, and applied research improve health programs.
- Discuss successful, evidence-based strategies for changing behaviors and improving health.

HLTH 491R : Mentored Research. (.5-3:Arr.:0)

DESCRIPTION: Collaborate with professors on mentoring grants or other public health-related research and initiatives.

Course Outcomes

- Experience at least one subset of research skills while conducting supervised public health research with a faculty member.

HLTH 496R : Academic Internship. (.5-9:ARR:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: HLTH 439

DESCRIPTION: Senior capstone experience.

Course Outcomes

- Obtain experience, as proctored by an approved internship supervisor, to apply professional competencies in public health as assessed through an internship report and internship supervisor rating

Graduate Courses

For 600- and 700-level courses, see the BYU 2013–2014 Graduate Catalog.

Program

- Life Sciences Preparation (Premajor Program)

Course Information

- Life Sciences (LfSci) Courses

Life Sciences Student Services

Shauna C. Anderson Young, Assistant Dean
380 WIDB, (801) 422-3042

Admission to Life Sciences Preparation (Premajor Program)

The program has open enrollment.

The Discipline

This is a premajor program for students interested in biology or life sciences and haven't decided on a specific major. It will allow students to investigate the science classes and then move to a major in the college without losing time to graduation.

Learning Outcomes

- Articulate and define personal, educational, and career goals.
- Describe critical thinking and be able to use it in pertinent decision-making processes.
- Realistically evaluate personal academic records.
- Design a curriculum plan that will meet career goals in the most time efficient manner.
- Describe character attributes that reflect high moral and ethical standards.
- Define and implement service in a broad context.
- Characterize the attributes of a responsible citizen.
- Access campus resources.
- Obtain a working knowledge of the university catalog and class schedule.
- Become proficient at MyMAP.
- Meet regularly with an academic advisor and come prepared to advising sessions.
- Save copies of all important academic paperwork.

Program Requirements | View MAP

1. Complete the following survey course:

LFSCI 101 : Life Sciences Seminar. (.5:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Services offered by the Life Sciences Student Services Center; choosing an appropriate major in the college.

Course Outcomes

- 1. Describe the services offered by the Life Sciences Student Services and when those services might be applied to your circumstances.2. Describe your understanding of what advising is and how you might benefit from the regular use of it.3. Design a curriculum plan to meet your career goals in the eight or nine semesters you have to graduate from BYU. Be able to articulate why this is important to you, the university, and other students.4. Demonstrate the ability to utilize MYMAP by organizing your major and general education courses for next semester.5. Articulate your personal and educational goals as you understand them this semester.6. Define proper classroom etiquette, and identify behaviors in your paragraph that show respect for faculty and presenters.7. Become acquainted with either an academic advisor or a faculty member this semester by visiting them at least three times.8. Deconstruct or evaluate high school learning strategies.9. Evaluate at least two majors in the College of Life Sciences that interest you by describing the discipline, the learning outcomes, courses required, and possible careers or post-graduate opportunities. If you have learned that none of our majors fit you, explain why.10. Describe the various university resources and what services they have for students.11. Describe BYU's unique campus culture.

2. Complete the following:

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

Course Outcomes

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics,

chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

Course Outcomes

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.

DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

MMBIO 241 : Molecular and Cellular Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBio 240 or concurrent enrollment.

DESCRIPTION: Molecular and cellular biology techniques laboratory.

Course Outcomes

- Practice ethics and integrity by working with groups and following lab rules.*Relates to Program Learning Outcome: A commitment to professional integrity and ethical behavior consistent with themission of the university.
- Learn the basics of experimental design, how to formulate a hypothesis, what controls to use, how to interpret experimental data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Practice scientific communication through written lab questions, exams and oral presentations.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Learn molecular biology laboratory techniques through practical laboratory exercises. Techniques include, spectrophotometry,isolation of DNA and protein, quantification of DNA and protein, techniques used to purify or detect specific proteins, such aschromatography, western blot and ELISA, DNA fingerprinting, polymerase chain reaction and enzyme assays.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology.

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes

There are no course outcomes available

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: High school algebra and trigonometry.

RECOMMENDED: Concurrent enrollment in Phscs 107.

DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes

There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 105 or equivalent.

RECOMMENDED: Concurrent enrollment in Phscs 108.

DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes
There are no course outcomes available

PHSCS 107 : General Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 105 or concurrent enrollment.

DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 106 or concurrent enrollment

DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes
- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

3. Complete one course from the following:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes
- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

Course Outcomes
- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite

sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

MATH 119 : Introduction to Calculus. (4:4:1)

OFFERED: Independent Study only.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 110 and Math 111; or equivalent.
DESCRIPTION: Introduction to plane analytic geometry and calculus.

Course Outcomes

- This course is designed to provide beginning undergraduate students a first exposure to Calculus concepts, theorems, and techniques. In general, theorems will not be proved. An understanding of the theorems and their applications to solve calculus problems will be taught. Students will be expected to develop effective problem solving skills based on their understanding of the theory and not just memorize a set of routines to solve problems. For a more detailed course description, visit the Math 119 Wiki page.

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: MATH 110 or equivalent.
DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

*Hours include courses that may fulfill university core requirements.

Undergraduate Courses

100-Level Courses

LFSCI 101 : Life Sciences Seminar. (.5:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Services offered by the Life Sciences Student Services Center; choosing an appropriate major in the college.

Course Outcomes

- 1. Describe the services offered by the Life Sciences Student Services and when those services might be applied to your circumstances.2. Describe your understanding of what advising is and how you might benefit from the regular use of it.3. Design a curriculum plan to meet your career goals in the eight or nine semesters you have to graduate from BYU. Be able to articulate why this is important to you, the university, and other students.4. Demonstrate the ability to utilize MYMAP by organizing your major and general education courses for next semester.5. Articulate your personal and educational goals as you understand them this semester.6. Define proper classroom etiquette, and identify behaviors in your paragraph that show respect for faculty and presenters.7. Become acquainted with either an academic advisor or a faculty member this semester by visiting them at least three times.8. Deconstruct or evaluate high school learning strategies.9. Evaluate at least two majors in the College of Life Sciences that interest you by describing the discipline, the learning outcomes, courses required, and possible careers or post-graduate opportunities. If you have learned that none of our majors fit you, explain why.10. Describe the various university resources and what services they have for students.11. Describe BYU's unique campus culture.

LFSCI 190R : College of Life Sciences Student Council. (1:1:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Application for student council position.

DESCRIPTION: Active involvement on the student council for the College of Life Sciences. Issues facing students in the college explored and solutions suggested.

Course Outcomes

- 1. Actively develop new leadership skills2. Represent the students of the College of life Sciences3. Set a personal goal in the area of leadership development

LFSCI 199R : Nonresearch Academic Internship. (.5-3:0:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Approval by Life Sciences Student Services.

DESCRIPTION: Academic internship for work experience or job shadowing. Does NOT involve mentored research.

Course Outcomes

- 1. Gain work experience and/or insight to possible careers by observing qualified providers.2. Exhibit proficient writing skills by producing a summary paper at the conclusion of the internship.3. Function as a collaborative team member while participating in the internship experience.

300-Level Courses

LFSCI 399R : Academic Internship. (.5-6:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

DESCRIPTION: Approved experiential learning.

Course Outcomes

- 1. Demonstrate critical or analytical thinking skills by analyzing and interpreting experimental data.2. Exhibit proficient writing skills by producing a portfolio, research paper, scientific journal article, and/or a scientific poster. 3. Critically read scientific literature and evaluate the ability of an argument or evidence to support a conclusion.4. Function as a collaborative team member by participating in student mentored learning groups or research groups.

400-Level Courses

LFSCI 489R : Senior Library Thesis. (1-6:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Prospectus approval by Life Sciences Student Services.

DESCRIPTION: Mentored library study that extensively explores relevant questions determined by an approved faculty mentor.

Course Outcomes

- 1. Develop a research problem and have the prospectus evaluated by Life Science Student Services.2. Prepare a thesis following University protocol.

LFSCI 490R : Special Problems. (1-6:0.0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Life Sciences Student Services consent.

Course Outcomes

- 1. The student is expected to have this experience preapproved by Life Science Student Services.2. Develop a research or problem-solving component which is mutually agreed upon by Life Science Student Services and the student.3. Develop a portfolio during the experience. This portfolio should discuss topics including but not limited to: an abstract of the project, a description of methods and materials (include tables, graphs, pictures or other visuals as appropriate), results, summary, and significance of the laboratory experience. The portfolio must be a minimum of 5-6 pages in report form.

LFSCI 494R : Mentored Research. (1-6:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

Course Outcomes

- 1. Demonstrate critical or analytical thinking skills by analyzing and interpreting experimental data.2. Exhibit proficient writing skills by producing a portfolio, research paper, scientific journal article, and/or scientific poster.3. Critically read scientific literature and evaluate the ability of an argument or evidence to support a conclusion.4. Function as a collaborative team member by participating in student mentored learning groups or research groups.

LFSCI 499R : Senior Honors Thesis. (1-6:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

DESCRIPTION: Topic to be cleared with Honors Program Office and Life Sciences Student Services.

Course Outcomes

- 1. Develop a research problem and have the prospectus evaluated by the Honors Program and Life Science Student Services.2. Prepare a thesis following the Honors Program protocol.

Admission to Degree Program

All degree programs in the Department of Microbiology and Molecular Biology are open enrollment. However, special limitations apply for medical laboratory science.

The Discipline

The Microbiology and Molecular Biology Department offers degrees in microbiology, molecular biology, and medical laboratory science. A wide range of courses may be incorporated into a program of study, including: ecology, genetics, immunology, microbial physiology, molecular biology, molecular evolution, parasitology, and pathogenesis.

Career Opportunities

Graduates are employed in a wide variety of positions in industry, hospitals, government agencies, and universities. Majors from this department are an excellent preprofessional course of study for those interested in medicine, dentistry, law, or business.

The following courses are recommended for those students interested in graduate and professional programs:

Chem 351, 352, 353, 481.
Math 112 and 113.
Phscs 105, 106, 107, 108.
Stat 221.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

Undergraduate Programs and Degrees

BS in Medical Laboratory Science (Program Outcomes)
BS in Microbiology (Program Outcomes)
BS in Molecular Biology (Program Outcomes)

This is a limited-enrollment program requiring departmental admissions approval. Please see the department office for information regarding requirements for admission to this major.

Students who want to practice clinical laboratory science/medical technology in diagnostic laboratories or pursue related options choose this degree. The program in medical laboratory science is accredited by the National Accrediting Agency for Medical Laboratory Sciences (5600 N River Rd, Suite 720, Rosemont, IL 60018, [773] 714-8880).

Program Requirements | View MAP | View Program Outcomes

1. Students must complete the following courses before applying to the program:

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.

DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

MMBIO 261 : Infection and Immunity. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Principles of infectious organisms (principally bacteria and viruses), the diseases they cause, and the role of host immune responses in health and disease.

Course Outcomes

There are no course outcomes available

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes
There are no course outcomes available

2. Application deadlines are March 1 for fall semester admittance and October 1 for winter semester admittance.

Program Requirements

1. Complete the following life sciences core requirements:

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.

DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes
- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

MMBIO 241 : Molecular and Cellular Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBio 240 or concurrent enrollment.

DESCRIPTION: Molecular and cellular biology techniques laboratory.

Course Outcomes
- Practice ethics and integrity by working with groups and following lab rules.*Relates to Program Learning Outcome: A commitment to professional integrity and ethical behavior consistent with themission of the university.
- Learn the basics of experimental design, how to formulate a hypothesis, what controls to use, how to interpret experimental data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Practice scientific communication through written lab questions, exams and oral presentations.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Learn molecular biology laboratory techniques through practical laboratory exercises. Techniques include, spectrophotometry,isolation of DNA and protein, quantification of DNA and protein, techniques used to purify or detect specific proteins, such aschromatography, western blot and ELISA, DNA fingerprinting, polymerase chain reaction and enzyme assays.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology.

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes
There are no course outcomes available

PDBIO 220 : Human Anatomy (with lab). (3:2:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Structure and function of the human body. Lab included.

Course Outcomes
- Students will demonstrate an understanding of the basic microscopic underpinnings of tissue structures and be able to name them.
- Students will demonstrate a greater understanding and appreciation for the human body, it's overall design and connections to other living organisms, and what a marvelous creation it is.
- Students will be able to list the name, location, and function of each of the body's organs and organ systems.

PDBIO 305 : Human Physiology (with lab). (4:4:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

RECOMMENDED: A general biology course.

DESCRIPTION: Function of body organ systems.

NOTE: Not acceptable for physiology and developmental biology, biophysics, or neuroscience majors.

Designed for students with basic chemistry / no molecular biology. Students with chemistry/molecular biology should take PDBio 362.

Course Outcomes
- Students will demonstrate the proper use of physiology terminology.
- Student will demonstrate a well-integrated and comprehensive understanding of the human body in health and disease.
- Students will use knowledge of cells and organ systems to solve problems related to the function of the human body.
- Students will demonstrate the necessary knowledge and skills in physiology that are required for their majors and future aspirations for graduate and professional school.
- Students will develop and demonstrate in their daily lives a deeper appreciation and respect for the human body.
- Students will demonstrate the knowledge to make informed personal (medical,ethical,and political)decisions regarding physiological concepts.

PDBIO 360 : Cell Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Fundamentals of cell structure and function with reference to analytical methods used by cell biologists. Practice in designing, executing, and interpreting relative experiments.

Course Outcomes
- Students will demonstrate knowledge of the molecular architecture of the nucleus, including the nuclear envelope, nucleoplasm and nucleolus, chromatin, and the nuclear pore.
- Students will demonstrate an understanding of protein transport, including nuclear import and export and vesicular transport through the secretory and sorting pathways.
- Students will demonstrate knowledge of the molecular and cellular structure and dynamics of cytoskeletal systems.
- Students will be able to apply the basic cell biological principles in outcomes 1-3 to more complicated cellular processes, including cell adhesion, cell migration, cell polarity, cell division, cancer, and development.
- Students will demonstrate the ability to generate hypothesis about how cell biological systems work at the molecular level and design experiments that test that hypothesis.
- Students will demonstrate competence in interpreting original raw data from cell biology experiments, including microscopy, protein biochemistry, molecular biology, and genetics strategies
- Students will demonstrate the ability to critically evaluate primary cell biology literature, including the ability to evaluate the design and interpretation of experimental data.

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes
- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

2. Complete the following chemistry courses:

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes
- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN Fall; Winter; Summer

TAUGHT:
PREREQUISITE: CHEM 105; or CHEM 111
DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.
NOTE: Three lectures and one recitation section per week.

Course Outcomes
- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.
DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.
NOTE: Required for most students needing one year of general chemistry.

Course Outcomes
- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 285 : Introductory Bio-organic Chemistry. (4:4:1)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Chem 101 or equivalent.
DESCRIPTION: Principles of organic chemistry and biochemistry relating to biomolecule structure and function.

Course Outcomes
- Students will understand the metabolism of carbohydrates, lipids, and proteins in humans. They will be able to describe in structures and words the metabolism of sugars through the pathways of glycolysis, the citric acid cycle, and the electron transport chain.
- Students will understand the structure and reactivity of organic functional groups, such as alcohols, aldehydes, carboxylic acids, and amides. For example, students will learn that aldehydes and ketones typically undergo addition reactions.
- Students will understand the structure and reactivity of the biomolecules that have those functional groups. For example, students will be able to demonstrate that carbohydrates are aldehydes and ketones that undergo addition reactions to form hemiacetals and polysaccharides with acetal linkages.

3. Complete the following department courses:

MMBIO 102 : Introduction to Clinical Laboratory Techniques. (1:0:3)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Hospital laboratory techniques.

Course Outcomes
- Describe and carry out basic clnical laboratory techniques
- List and evaluate careers in clinical laboratory sciences

MMBIO 261 : Infection and Immunity. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Principles of infectious organisms (principally bacteria and viruses), the diseases they cause, and the role of host immune responses in health and disease.

Course Outcomes
There are no course outcomes available

MMBIO 392 : Hematology. (2.5:2.5:1)
PREREQUISITE: Medical laboratory science program acceptance.
DESCRIPTION: Normal and abnormal hematology.

Course Outcomes
- Perform the full range of clinical laboratory tests in areas such as hematology and play a role in the development and evaluation of test systems and interpretive algorithms*Relates to Program Learning Outcome: #1
- Have diverse responsibilities in areas of analysis and clinical decision-making, regulatory compliance with applicable regulations, education, and quality assurance/performance improvement wherever laboratory testing is researched, developed, or performed*Relates to Program Learning Outcome: #2
- Possess basic knowledge, skills, and relevant experiences for the following:Communications to enable consultative interactions with members of the healthcare team, external relations, customer service, and patient educationFinancial, operations, marketing, and human resource management of the clinical laboratory to enable cost-effective, high-quality, value-added laboratory servicesInformation management to enable effective, timely, accurate, and cost-effective reporting of laboratory-generated information *Relates to Program Learning Outcome: #3, 4, 5

MMBIO 393 : Immunohematology and Coagulation Theory. (2.5:2.5:1)

PREREQUISITE: Medical laboratory science program acceptance.

DESCRIPTION: Theory and practice of bloodbanking and coagulation theory.

Course Outcomes

- Perform the full range of clinical laboratory tests in areas such as coagulation and immunohematology and play a role in the development and evaluation of test systems and interpretive algorithms*Relates to Program Learning Outcome: #1
- Have diverse responsibilities in areas of analysis and clinical decision-making, regulatory compliance with applicable regulations, education, and quality assurance/performance improvement wherever laboratory testing is researched, developed, or performed*Relates to Program Learning Outcome: #2
- Possess basic knowledge, skills, and relevant experiences for the following:Communications to enable consultative interactions with members of the healthcare team, external relations, customer service, and patient educationFinancial, operations, marketing, and human resource management of the clinical laboratory to enable cost-effective, high-quality, value-added laboratory servicesInformation management to enable effective, timely, accurate, and cost-effective reporting of laboratory-generated information*Relates to Program Learning Outcome: #3, 4, 5

MMBIO 394 : Practical Hematology. (2:0:7)

PREREQUISITE: MMBio 392 or concurrent enrollment.

DESCRIPTION: Laboratory to accompany MMBio 392; medical laboratory techniques in hematology.

Course Outcomes

- Discuss the techniques of drawing, proper collection, and storage of blood samples for hematology procedures. *Relates to Program Learning Outcome: #1
- Practice safe techniques according to those presented in class and in the textbook throughout your career in student and clinical laboratory experiences. *Relates to Program Learning Outcome: #2
- Demonstrate your ability to properly use the various types of spectrophotometers in the laboratory.*Relates to Program Learning Outcome: #2
- Prepare the reagents required in the procedures throughout the semester where possible.*Relates to Program Learning Outcome: #2
- Select proper reagents, perform procedures, interpret results, and evaluate the significance of the results for all determinations listed on the course outline*Relates to Program Learning Outcome: #2

MMBIO 395 : Practical Immunohematology and Coagulation Theory. (2:0:7)

PREREQUISITE: MMBio 393 or concurrent enrollment.

DESCRIPTION: Laboratory to accompany MMBio 393; medical laboratory techniques in immunohematology and coagulation theory.

Course Outcomes

- Perform the full range of clinical laboratory tests in areas such as coagulation and blood banking and play a role in the development and evaluation of test systems and interpretive algorithms*Relates to Program Learning Outcome: #1
- Have diverse responsibilities in areas of analysis and clinical decision-making, regulatory compliance with applicable regulations, education, and quality assurance/performance improvement wherever laboratory testing is researched, developed, or performed*Relates to Program Learning Outcome: #2
- Possess basic knowledge, skills, and relevant experiences for the following:Communications to enable consultative interactions with members of the healthcare team, external relations, customer service, and patient educationFinancial, operations, marketing, and human resource management of the clinical laboratory to enable cost-effective, high-quality, value-added laboratory servicesInformation management to enable effective, timely, accurate, and cost-effective reporting of laboratory-generated information*Relates to Program Learning Outcome: #3, 4, 5

MMBIO 407 : Clinical Microbiology. (4:2:6)

WHEN TAUGHT: Winter

PREREQUISITE: MMBIO 261; Admission to the Medical Laboratory Science program.

DESCRIPTION: Approaches to laboratory diagnosis of infectious diseases.

Course Outcomes

- Gain familiarity with the medically important bacteria and fungi by performing the full range of clinical laboratory tests in Microbiology (Prepare, examine and interpret gram stained smears of microorganisms, streak appropriate media for isolation of microorganisms, interpret stains, growth patterns, and biochemical reactions to aid in the identification of microbial organisms) and play a role in the development and evaluation of test systems and interpretive algorithms
- Have diverse responsibilities in areas of analysis and clinical decision-making, regulatory compliance with applicable regulations, education, and quality assurance/performance. Demonstrate improvement wherever laboratory testing is researched, developed, or performed. Be able to design experiments, with appropriate controls, to test various hypotheses in clinical Microbiology.
- Possess basic knowledge, skills, and relevant experiences for the following:Communications to enable consultative interactions with members of the healthcare team, external relations, customer service, and patient educationFinancial, operations, marketing, and human resource management of the clinical laboratory to enable cost-effective, high-quality, value-added laboratory servicesInformation management to enable effective, timely, accurate, and cost-effective reporting of laboratory-generated information
- Possess basic knowledge, skills, and relevant experiences for the following:Communications to enable consultative interactions with members of the healthcare team, external relations, customer service, and patient educationFinancial, operations, marketing, and human resource management of the clinical laboratory to enable cost-effective, high-quality, value-added laboratory servicesInformation management to enable effective, timely, accurate, and cost-effective reporting of laboratory-generated information
- Possess basic knowledge, skills, and relevant experiences for the following:Communications to enable consultative interactions with members of the healthcare team, external relations, customer service, and patient educationFinancial, operations, marketing, and human resource management of the clinical laboratory to enable cost-effective, high-quality, value-added laboratory servicesInformation

management to enable effective, timely, accurate, and cost-effective reporting of laboratory-generated information

MMBIO 417 : Medical Parasitology. (3:2:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Bio 100 or equivalent.

DESCRIPTION: Pathogenesis, diagnosis, and epidemiology of human parasitic diseases. Laboratory included.

Course Outcomes

- Gain familiarity with the medically important parasites. This includes understanding parasite host range as well as pathology and mechanisms of pathogenesis.*Relates to Program Learning Outcome: Exhibit mastery of medical microbiology
- Be able to design experiments, with appropriate controls, to test various hypotheses in parasitology.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Read and critically interpret current scientific literature in the field of parasitology.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Students should gain an understanding of their role and responsibility in alleviating suffering caused by parasitic diseases.*Relates to Program Learning Outcome: Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological principles.

MMBIO 422 : Pathophysiology and Laboratory Diagnosis in Clinical Chemistry. (2.5:2:1)

PREREQUISITE: Medical laboratory science program acceptance.

DESCRIPTION: Laboratory diagnosis of disorders involving the major systems of the human body.

Course Outcomes

- Perform analytical tests of body fluids, cells, and other substances
- Confirm abnormal results, verify quality control procedures, execute quality control procedures, and develop solutions to problems concerning the generation of laboratory data
- Make decisions conscerning the results of quality control and quality assurance measures, and institute proper pocedures to maintain accuracy and precision.

MMBIO 423 : Pathophysiology and Lab Diagnosis in Clinical Chemistry and Molecular Diagnostics. (2.5:2:1)

PREREQUISITE: Medical laboratory science program acceptance.

DESCRIPTION: Laboratory diagnosis of disorders involving the major systems of the human body and molecular diagnostic applications.

Course Outcomes

- Perform the full range of clinical laboratory tests in areas such as clinical chemistry, urinalysis and molecular dioagnostics and play a role in the development and evaluation of test systems and interpretive algorithms
- Have diverse responsibilities in areas of analysis and clinical decision-making, regulatory compliance with applicable regulations, education, and quality assurance/performance improvement wherever laboratory testing is researched, developed, or performed.
- Possess basic knowledge, skills, and relevant experiences for the followingCommunications to enable consultative interactions with members of the healthcare team, external relations, customer service, and patient educationFinancial, operations, marketing, and human dresource management of the clinical laboratory to enable cost-effective, hight-quality, value-added laboratorys ervicesInformation management to enable effective, timely, accurate, and cost-effective reporting of laboratory-generated informaation

MMBIO 424 : Diagnostic Techniques in Clinical Chemistry. (2:0:7)

PREREQUISITE: Clinical laboratory science program acceptance.

DESCRIPTION: Medical laboratory techniques in clinical chemistry.

Course Outcomes

- Perform the full range of clinical laboratory tests in clinical chemistryDiscuss the techniques of drawing, proper collection, and storage of blood samples for clinical chemistry proceduresPractice safe techniques according to those presented in class and in the textbook throughout your career in student and clinical laboratory experiences.Demonstrate your ability to properly use the various types of spectrophotometers in the laboratoryPrepare the reagents required in the procedures throughout the semester where possiblePerform proper procedures, discuss the purpose of reagents, interpret results, evaluate quality assurance factors and solve problems or discrepancies for the assays and tasks performed.
- Have diverse responsibilities in areas of analysis and clinical decision-making, regulatory compliance with applicable regulation, education, and quality assurance performance improvement whenever laboratory testing is researched, developed, or performed.

MMBIO 425 : Diagnostic Techniques in Clinical Chemistry and Molecular Biology. (2:0:7)

PREREQUISITE: Medical laboratory science program acceptance.

DESCRIPTION: Medical laboratory techniques in clinical chemistry and diagnostic molecular genetics.

Course Outcomes

- Perform the full range of clinical laboratory tests in clinical chemistryDiscuss the techniques of drawing, proper collection, and storatge of blood samples for clinical chemistry proceduresPractice safe techniques according to those presented in class and in the textbook throughout your career in studen and clinical laboratory experiences.Demonstrate your ability to properly use the various types of spectrophotometers in the laboratoryPrepare the reagents required in the procedures throughout the semester where possiblePerform proper procedures, discuss the purpose of reagents, interpret results, evaluate quality assurance factors and solve problems or discrepancies for the assays and tasks performed.
- Have diverse responsibilities in areas of analysis and clinical decision-making, regulatory compliance with

applicable regulation, education, and quality assurance performance improvement whenever laboratory testing is researched, developed, or performed.

MMBIO 491 : Concept Applications in Laboratory Medicine. (1:1:0)

WHEN TAUGHT: Fall

PREREQUISITE: Acceptance into medical laboratory science program.

DESCRIPTION: Case presentations of various medical disorders.

Course Outcomes

- This course is designed to allow the student to interpret, evaluate, and correlate laboratory data and clinical symptoms pertaining to specific disease states. Each week several students will present case study presentations covering current lecture content. For example, week two covers carbohydrate metabolism and related disease processes so the assigned students will present patient data focusing on a specific disease such as diabetes mellitus, including symptoms, laboratory findings and treatment.
- To receive a passing grade for this course, it is expected that the student will attend all weekly sessions ON TIME with no more than one excused absence permitted and present at least one case study during the semester. Class will be held on each Friday of the semester at 9 a.m.

4. Complete an internship experience. During one semester and one term, complete at least 2 hours from the following:

MMBIO 496R : Clinical Experience. (1-9:0:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 392 & MMBIO 422

DESCRIPTION: Performing the full range of clinical laboratory tests in an affiliated clinical facility. A six-month internship experience.

Course Outcomes

- Have a clinical eperience outside of the University. Be familiar with procedures, protocols, and working environment in a working clinical laboratory.

5. Complete an exit interview.
6. Pass the BYU comprehensive exam offered during the clinical experience.

Recommended Courses

ENGL 316 : Technical Communication. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: First-year writing, junior or senior status.

DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.

NOTE: Carries GE Advanced Written and Oral Communication credit.

Course Outcomes

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and

acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

*Hours include courses that may fulfill university core requirements.

This is the preferred degree for microbiology majors who desire an advanced degree (master's or doctorate) in microbiology.

Program Requirements | View MAP | View Program Outcomes

1. Complete one of the following courses:

BIO 130 : Biology. (4:3:1)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: General biology course with laboratory for biology majors. Introduction to disciplines in the life sciences including methods for scientific inquiry, biochemical dynamics, cell structure and function, evolutionary theory, bioenergetics, and ecological interactions.

Course Outcomes

- Students will demonstrate basic literacy in the language of science and an understanding of the foundational theories of biology (i.e., be able to formulate appropriate hypotheses and predictions to test specific biological phenomena and use appropriate vocabulary to do so) o Atomic Molecular Theoryo Cell Theoryo Theories of Photosynthesis, Fermentation, and Cellular Respirationo Cell Division and Meiotic Theorieso Chromosomal and Mendelian Theories of Inheritanceo Watson and Crick's Theory of DNA Structure and Replicationo Protein Synthesis Theoryo Darwin's Theory of Natural Selectiono Hardy-Weinberg Theoryo Ecosystem Theoryo Population Growth Theoryo Competitive Exclusion and Behavioral Theory
- Students will demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strengths and weaknesses of this process.
- Students willappreciate the excitement of discovery that has accompanied important scientific developments.
- Students will demonstrate how scientific methodology can be used to analyze real-world science-related problems.
- Students will be able to evaluate scientific data and claims in order to make rational decisions on public-policy science issues that affect their community.
- Students will be able to express their thoughts (in oral, graphical, and written formats) on scientific topics clearly, including appropriate use of basic scientific vocabulary and effective interpretation of quantitative data.
- Students will be able to reflect rationally upon the interface between science and religion.
- Students will demonstrate sound scientific reasoning ability.

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes

There are no course outcomes available

2. Complete the following biology core courses:

MMBIO 151 : Introduction to Microbiology. (4:3:3)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Chem 105 or concurrent enrollment.

DESCRIPTION: Principles of prokaryotic biology emphasizing cell structure, function, and metabolism. Introduction to bacterial genetics, microbial diversity, and microbial ecology.

Course Outcomes

- Understand what microbes are, what they are composed of, how they are built, and their phylogenetic relationships to the living world. Be able to distinguish between eukaryotes, prokaryotes, and viruses.*Relates to Program Learning Outcome: "Exhibit mastery of four of the following six principal areas of the discipline" five of which are microbial physiology, microbial genetics, microbial ecology, medical microbiology, and virology
- Become familiar with the tools of microbiology through both lecture and labs and demonstrate basic aseptic technique. Develop proficiency in working with bacteria including streaking for isolation and performing growth experiments.*Relates to Program Learning Outcome: "Exhibit mastery of four of the following six principal areas of the discipline" three of which are microbial physiology, microbial genetics, microbial ecology
- Formulate questions, testable hypotheses and implement appropriate experimental protocol. Collect and analyze data and be able to draw appropriate conclusions.*Relates to Program Learning Outcome: "Devise experiments with appropriate hypotheses and controls."
- Integrate knowledge to make informed judgments on tests, lab reports, lab presentations and lab write-ups*Relates to Program Learning Outcome: "Communicate scientific information using both oral and

written methods"
- Obtain a deeper appreciation for the complexity, diversity and purposes of life.*Relates to Program Learning Outcome: "Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological principles"

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.

DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes
- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

MMBIO 241 : Molecular and Cellular Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBio 240 or concurrent enrollment.

DESCRIPTION: Molecular and cellular biology techniques laboratory.

Course Outcomes
- Practice ethics and integrity by working with groups and following lab rules.*Relates to Program Learning Outcome: A commitment to professional integrity and ethical behavior consistent with themission of the university.
- Learn the basics of experimental design, how to formulate a hypothesis, what controls to use, how to interpret experimental data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Practice scientific communication through written lab questions, exams and oral presentations.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Learn molecular biology laboratory techniques through practical laboratory exercises. Techniques include, spectrophotometry,isolation of DNA and protein, quantification of DNA and protein, techniques used to purify or detect specific proteins, such aschromatography, western blot and ELISA, DNA fingerprinting, polymerase chain reaction and enzyme assays.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology.

MMBIO 261 : Infection and Immunity. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Principles of infectious organisms (principally bacteria and viruses), the diseases they cause, and the role of host immune responses in health and disease.

Course Outcomes
There are no course outcomes available

3. Complete four courses from the following (at least two of which must have a lab component):

MMBIO 360 : Microbial Genetics. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBIO 240

DESCRIPTION: How DNA governs complex bacterial functions. Classical and modern approaches to gene discovery, including genetic screens, gene mapping, targeted genetic manipulations, and analyzing gene activity.

Course Outcomes
There are no course outcomes available

MMBIO 363 : Microbial Ecology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 130; or MMBIO 151; or PDBIO 120

DESCRIPTION: Natural history of a microbe; its distribution and abundance. Critical influence of scale and perspective in determining underlying mechanisms.

Course Outcomes
There are no course outcomes available

MMBIO 364 : Bacterial Pathogenesis. (4:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: MMBIO 261

DESCRIPTION: Fundamental principles of bacterial pathogenesis, emphasizing the molecular interactions of medically important bacteria and their hosts.

Course Outcomes
There are no course outcomes available

MMBIO 461 : Advanced Bacterial Physiology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481 & MMBIO 151
DESCRIPTION: Principles of prokaryotic physiology, including cell structure and function, gene regulation, and biochemical processes; focusing on the unique aspects of prokaryotic biology.

Course Outcomes
- Students will demonstrate an advanced understanding of selected topics in microbial physiology (cell structure, growth, biosynthesis, transport, etc.) through their participation in classroom discussions, writing assignments and oral presentations.
- Students will demonstrate the ability to read, comprehend and communicate current research in microbial physiology by making Powerpoint presentations to the class.
- Students will write a scientific review article on a topic of their choice related to microbial physiology.

MMBIO 463 : Immunology. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: MMBIO 240 & MMBIO 261
DESCRIPTION: Advanced concepts of immunological processes.

Course Outcomes
- Understanding advanced concepts of Immunology by studying and reflecting on the subject.*Relates to Program Learning Outcome: Exhibit mastery of four of the principle areas of the discipline
- Understands experimental designs used in immunology research and determine the soundness of the immunological data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Read and understand current publications in Immunology and be able to discuss and critically evaluate experiments and data*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Engage in discussions about concepts in immunology and research. Present a PowerPoint on a particular immunological topic. Engage in a question and answer session on the content. Write an easy on a chosen subject relating to recent immunological advances.*Relates to Program Learning Outcome: Communicate scientific information using both oral and written methods.
- Develop a deep appreciation for our Heavenly Father and his love for each of us by engaging in studying how he designed the immune system to protect his children from disease.*Relates to Program Learning Outcome: Reflect/ discuss/ explore how faith in the Lord, and Christ like living are affected by an understanding of the fundamental biological processes.

MMBIO 465 : Virology. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: MMBio 261 or equivalent.
DESCRIPTION: Basic principles of virology, emphasizing selected molecular aspects of virus life cycles and disease processes.

Course Outcomes
- Be able to answer basic questions about Virology: Why are viruses organized as they are? How do viruses replicate? How do viruses cause disease? What are the interactions between viruses and the host immune system? How to prevent/treat/cure viral infections? How can viruses be used as tools to study biological processes and for gene transfer? How can an understanding of viruses help you in your future career? *Relates to Program Learning Outcome: "Exhibit mastery of four of the principal areas of the discipline", one of which is Virology.
- Understand experimental tools used to study viruses (these are broadly applicable to molecular biology, cell biology, and microbiology) and be able to develop experiments and interpret data.*Relates to Program Learning Outcomes: "Devise experiments with appropriate hypotheses and controls" and "Interpret experiments from primary scientific literature"
- Write about a current, pressing issue in the field of Virology.*Relates to Program Learning Outcome: "Communicate scientific information"
- Understand how research of viruses "by study and also by faith" can lead to alleviation of human disease and suffering.*Relates to Program Learning Outcome: "Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological processes"

Note: For MMBio 360, 363, and 364, lab registration is automatic and included in the course with the lecture. MMBio 463 and 465 can be taken with or without the MMBio 467 or 466 labs, respectively.

4. Complete the following chemistry courses:

CHEM 105 : General College Chemistry. (4:5:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.
DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.
NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes
- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: CHEM 105; or CHEM 111
DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed

treatment of thermodynamics and equilibria.
NOTE: Three lectures and one recitation section per week.

Course Outcomes
- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.
DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.
NOTE: Required for most students needing one year of general chemistry.

Course Outcomes
- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 351 : Organic Chemistry. (3:3:1)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: CHEM 105; or CHEM 111
DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.
NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes
- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: CHEM 351; or CHEM 351M
DESCRIPTION: Continuation of Chem 351.

Course Outcomes
- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Chem 352 or concurrent enrollment (preferred).
DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.
NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes
- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

CHEM 481 : Biochemistry. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.
NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes
- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

5. Complete the following:

PHSCS 105 : General Physics 1. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: High school algebra and trigonometry.
RECOMMENDED: Concurrent enrollment in Phscs 107.
DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes
There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 105 or equivalent.
RECOMMENDED: Concurrent enrollment in Phscs 108.
DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes
There are no course outcomes available

6. Complete one of the following courses:

MATH 112 : Calculus 1. (4:5:0)
OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes
- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

*MATH 119 : Introduction to Calculus. (4:4:1)
OFFERED: Independent Study only.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 110 and Math 111; or equivalent.
DESCRIPTION: Introduction to plane analytic geometry and calculus.

Course Outcomes
- This course is designed to provide beginning undergraduate students a first exposure to Calculus concepts, theorems, and techniques. In general, theorems will not be proved. An understanding of the theorems and their applications to solve calculus problems will be taught. Students will be expected to develop effective problem solving skills based on their understanding of the theory and not just memorize a set of routines to solve problems. For a more detailed course description, visit the Math 119 Wiki page.

STAT 121 : Principles of Statistics. (3:3:1)
OFFERED: Independent Study also; Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: MATH 110 or equivalent.
DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes
- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs

Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

*Offered through BYU Independent Study.

7. Complete at least 10 hours from the following:

BIO 350 : Ecology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: PDBIO 120; or BIO 130
DESCRIPTION: Distribution and abundance of organisms and their interactions with the physical and biotic components of the earth.

Course Outcomes
- Understand the major physical processes that form and characterize the biosphere, including global scale energy flow, the carbon cycle, climate, and soil formation.
- Understand the processes that drive major levels of organization of the biotic world, including energetics in the ecosystem, population dynamics, and species interactions.
- Understand the importance of writing as a way of synthesizing and solidifying critical thought.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Understand the importance of ecology to issues regarding human well-being
- See the connectivity and relevance of ecology to other fields of study

BIO 420 : Evolutionary Biology. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBIO 240 & PWS 340
RECOMMENDED: Concurrent enrollment in Bio 421.
DESCRIPTION: Intensive examination of evolution as the conceptual cornerstone of biology.

Course Outcomes
- Students will be able to describe the history and development of evolutionary thought.
- Students will be able to list and describe the evidence for evolution and its required corollaries.
- Students will be able to describe the mechanisms by which evolution occurs. Provide detailed explanations of the the processes of evolution by mutation, migration, genetic drift, non-random mating, and natural selection.
- Students will be able to explain adaptation, providing examples from several different fields of biology (e.g., cell biology, physiology, conservation biology, bioinformatics, medicine, behavior, etc.).
- Students will be able to describe the history of life on earth. Identify major evolutionary transitions over time, and explain the tools and evidence that support current hypotheses of the history of life.

BIO 421 : Evolutionary Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBIO 240
DESCRIPTION: Hands-on applications and analytical tools of evolutionary biology; emphasizing inference methodology and evidence complementing the theoretical constructs introduced in Bio 520, including comparative anatomy, phylogenetic inference, population genetics, species concepts, and human evolution.
NOTE: Concurrent enrollment with Bio 420 is strongly recommended.

Course Outcomes
- Students will gain a better understanding of the basic principles of evolution within a population including selection, drift, and founder effects by using computer simulations.
- Students will have a deeper understanding of the LDS position on evolution.
- Students will learn the details of phylogenetic reconstruction, tree searching, DNA sequence alignment, and other bioinformatics tools for deciphering patterns of evolution.
- Students will learn the details of species concepts and the criteria used for identifying and diagnosing species.
- Students will gain hands-on experience with hominid fossils and gain an understanding of the evidence that elucidates the biological history of humans.

BIO 463 : Genetics of Human Disease. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: PWS 340
DESCRIPTION: Examining the application of genetics to understanding and treatment of human disease. Functional consequences of mutations; use of model organisms; linkage and association analysis of complex traits; pharmacogenetics; ethical considerations.

Course Outcomes
- Understand and explain the different types of genetic variants, how they can be typed and how they can be used to understand the genetic architecture of human disease.
- Understand linkage disequilibrium in the human genome and the role it plays in the search for genetic risk factors for human disease
- Understand and use basic statistics and software for analyzing the correlation between genetic markers and risk for disease.
- Understand and explain how model organisms contribute to our understanding of the genetics of human disease.
- Demonstrate the ability to obtain, aggregate and present information about the current knowledge of the genetics of a human disease.

CHEM 482 : Mechanisms of Molecular Biology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Second-semester biochemistry. Nucleic acid biochemistry and molecular biology: nucleotide metabolism, chromosome and chromatin structure, DNA structure and replication, RNA transcription and gene expression, protein synthesis and regulation, eukaryotic gene systems, signal transduction.

Course Outcomes

- Draw the structure of DNA, determine the topology of a plasmid, explain the chemical sequence of events that occur during DNA replication and draw structural changes that occur due to mutation.
- Determine how to perform and interpret an electrophoresis separation of DNA fragments, southern blot, restriction map, polymerase chain reaction, and a DNA sequencing reaction with necessary controls.
- Design a DNA cloning strategy, explain controls necessary, and write procedural plan.
- Draw and explain the mechanism of RNA transcription and how RNA is processed, spliced, and regulated. Understand the basic mechanisms of transcriptional regulation using the example of transcription of genes necessary for cholesterol synthesis.
- Determine when and how to use techniques that involve RNA: Northern blots, quantitative PCR, microarrays, S1 nuclease and primer extension mapping of the transcriptional start with appropriate controls.
- Determine the sequence of amino acids in a protein from a series of nucleotides.
- Draw and explain the process of protein translation and how it is regulated.
- Determine where a protein is localized in a tissue or cell: interpret a western blot, protein fusion assays.
- Determine with what a protein interacts: Interpret gel shift assays, Chromatin Immunoprecipitation, DNA footprinting, and yeast two hybrid reporter assays.
- Maintain faith through challenges and ethical boundaries in reporting and interpreting data.

MMBIO 194A : Freshman Research Initiative 1. (2:0:6)

WHEN TAUGHT: Fall

PREREQUISITE: By application only.

DESCRIPTION: Phage isolation and characterization.

NOTE: For freshmen or sophomore students only. Requires two semester commitment.

Course Outcomes

- Use proper aseptic techniques for the transfer and handling of microorganisms and instruments.
- Use appropriate microbiological media and test systems.
- Use standard microbiology laboratory equipment correctly.
- Follow an experimental protocol, collect and organize data in a systematic fashion, present data in anappropriate form, assess the validity of the data, and draw appropriate conclusions based on the results.

MMBIO 194B : Freshman Research Initiative 2. (2:0:6)

WHEN TAUGHT: Winter

PREREQUISITE: MMBIO 194A

DESCRIPTION: Phage genome annotation. Focus on experimental design and data analysis.

NOTE: For freshmen or sophomore students only. Requires two semester commitment.

Course Outcomes

- Prepare DNA for sequencing
- Archive phage samples and DNA samples (submit archived phage to HHMI)
- Learn how to use bioinformatics software for the following:DNA sequence alignment (Consed)Primer design (Primer3)Assessing ORFs for gene calls (GBrowse, Glimmer and GeneMark)Homology assessment (BLAST and Phamerator)Annotation (Apollo)Comparative analysis (positional and functional)
- Analyze, annotate and prepare to submit genome to GenBank (submit if possible)
- Prepare an abstract for a presentation of research data
- Prepare and deliver a research presentation (oral and poster)
- Gain experience in research writing and reading of scientific papers

MMBIO 362R : Careers in Biomedical Sciences. (1:ARR:ARR)

WHEN TAUGHT: Fall

DESCRIPTION: Lectures and field trips surveying career choices.

Course Outcomes

- Students should be able to make informed decisions about career paths in Microbiology

MMBIO 390R : Readings in Molecular Biology. (1:1:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240

RECOMMENDED: PDBio 360.

DESCRIPTION: Selected readings in molecular biology.

Course Outcomes

- Become familiar with the current literature and techniques in molecular biology
- Gain experience in critically evaluating the current literature in molecular biology.
- Gain confidence in scientific presentations and discussions.

MMBIO 399R : Academic Internship. (1-9:0:40)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

DESCRIPTION: Approved experiential learning.

Course Outcomes

- Students will be able to design and perform experiements using the latest techniques.
- Students will analyze experimental results and draw conclusions.
- Students will communicate with supervisors and collegues in an outside the university environment.

They will present their scientific research.

MMBIO 417 : Medical Parasitology. (3:2:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Bio 100 or equivalent.

DESCRIPTION: Pathogenesis, diagnosis, and epidemiology of human parasitic diseases. Laboratory included.

Course Outcomes

- Gain familiarity with the medically important parasites. This includes understanding parasite host range as well as pathology and mechanisms of pathogenesis.*Relates to Program Learning Outcome: Exhibit mastery of medical microbiology
- Be able to design experiments, with appropriate controls, to test various hypotheses in parasitology.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Read and critically interpret current scientific literature in the field of parasitology.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Students should gain an understanding of their role and responsibility in alleviating suffering caused by parasitic diseases.*Relates to Program Learning Outcome: Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological principles.

MMBIO 430 : Advanced Cell Biology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 360; Bioscience major status.

DESCRIPTION: Molecular genetics, cell biology, and developmental biology.

Course Outcomes

- Read primary literature to further their own understanding of the topic*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Explain the processes of cell biology*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Apply knowledge of these molecular processes to broader topics*Relates to Program Learning Outcome: Proficiency in formulating and carrying out independent and collaborative research projects.
- Analyze research data, design experiments and present data in a clear manner*Relates to Program Learning Outcome: Communication skills in presenting their research findings through effective oral and written presentations.

MMBIO 441 : Advanced Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & CHEM 352

DESCRIPTION: Molecular biology of gene structure and expression in prokaryotic and eukaryotic organisms.

Course Outcomes

- Learn molecular biology principles through study, lecture, and class discussion. An emphasis will be on understanding the experiments used to learn these principles.â ¨ *Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology preparing students for further education and/or employment.
- Apply the principles learned to design experiments and properly interpret experimental data.â ¨ *Relates to Program Learning Outcome: Proficiency in formulating research projects
- Present current research from the scientific literature.*Relates to Program Learning Outcomes: Communicate scientific information using oral methods; interpret, analyze and critique experiments from the primary scientific literature. Presenting research findings through effective oral and written presentations.
- Demonstrate integrity and ethical behavior during all class work.â ¨ *Relates to Program Learning Outcome: Commitment to professional integrity and ethical behavior consistent with the mission of the University.

MMBIO 442 : Advanced Molecular Biology Laboratory. (2:0:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 241; MMBio 441 or concurrent enrollment.

DESCRIPTION: Laboratory to accompany MMBio 441.

Course Outcomes

- Learn molecular biology laboratory techniques through hands-on experience. Techniques will include DNA and RNA isolation, PCR, microRNA isolation, northern blotting, RFLP analysis, site-directed mutagenisis, protein extraction and EMSA.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology
- Apply the techniques to design experiments with appropriate hypotheses and controls and properly interpret experimental data*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls
- Practice scientific communication and record-keeping through the completion of a laboratory notebook and answering written and oral questions and presentations.*Relates to Program Learning Outcome: Demonstrate Communication skills in presenting research findings through effective oral and written presentations.
- Design and carry out independent experiments*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls

MMBIO 466 : Virology Laboratory. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: MMBio 261; or MMBio 465 or concurrent enrollment.

DESCRIPTION: Laboratory exercises illustrating in vitro behavior of selected viruses. Developing laboratory skills for virus studies.

Course Outcomes

- Be able to gain hands-on experience in the ability to characterize various aspects of viral infections based upon cultured eukaryotic cells.
- Be able to titrate virus stocks.

- Be able to determine if a human has been previously exposed to a specific virus by perform serological tests.

MMBIO 467 : Immunology Lab. (1:0:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBio 261; or 463 or concurrent enrollment.

DESCRIPTION: Laboratory exercises in advanced concepts of immunological processes.

Course Outcomes

- Maintain a research lab book with experimental protocol, data, and discussion of results.
- Understand advanced laboratory concepts of Immunology by completing protocols and experiments
- Understand experimental design used in immunology research and determine the soundness of immunological data according to the design and controls used in the experiment.
- Obtain and interpret experimental data.
- Expand the student's understanding of immunology research and acknowledge the miracle of immunological processes. Develop good social skills through participation in laboratory experiments with other students.

MMBIO 470R : Synthetic Biology. (1-2:Arr:Arr)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; Application and interview.

DESCRIPTION: Students are introduced to concepts of synthetic biology and then conceptualize, design, build, and characterize a genetically engineered machine. The class culminates in presentations at the IBE Western regional and IGEM regional conferences in October.

Course Outcomes

There are no course outcomes available

MMBIO 494R : Mentored Research. (.5-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

DESCRIPTION: Mentored research.

Course Outcomes

- Perform current techniques and carry out experiments in a professional manner. Gather data and evaluate results.
- Properly notate work and results in a scientific notebook. Participate in the preparation of scientific papers and presentations.
- Develop, design and troubleshoot experimental procedures.
- Form relationships with a research mentor and other students in the lab. Begin networking and professional activities.
- Read, and use primary literature to design experiements and advance a project. Present and evaluate articles from the primary literature

MMBIO 510 : History of Microbiology and Molecular Biology. (2:2:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: Any one 400-level MMBio course.

DESCRIPTION: Exploring the lives and historical settings of major contributors to the development of the sciences of microbiology and molecular biology emphasizing the importance of their ground-breaking discoveries in both basic and applied science.

Course Outcomes

- The objective of this course is to examine the lives and accomplishments of a few of our science ancestors creating a clearer perspective of our place in the constellation of our science.

MMBIO 513 : Philosophy of Biology. (2:2:0)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: MMBio 360 or 363 or 461 or equivalent.

DESCRIPTION: Epistemological, metaphysical, and ethical issues in the biological sciences. Philosophical questions concerning the theory of evolution, debate between evolution and creationism, fitness, adaptationism, the units of selection, systematics, sociobiology, and evolutionary ethics.

Course Outcomes

- Students will read and analyze historically relevant scientific primary literature
- Students will explain philisophical concepts underyling biology
- Students will use philisophical principles to discuss and evaluate ethical issues in biology

MMBIO 515 : RNA-Mediated Gene Regulation. (2:2:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: MMBio 441 or equivalent.

DESCRIPTION: Current advances in studies on RNA processing, including RNA splicing and editing, riboswitches, ribozymes, and the role of small RNAs in RNA interference and regulation of gene expression.

Course Outcomes

- Understand the current approaches and advances in RNA-mediated gene regulation research.
- Read and comprehend reports in the current scientific literature regarding RNA-mediated gene regulation.
- Develop skills in making effective scientific presentations using high standards of clarity, relevance, and logic.

MMBIO 518 : Select Pathogens. (2:2:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: MMBio 221 or equivalent.
DESCRIPTION: Current literature in special pathogens.

Course Outcomes
- Understand the procedures, practices, and facilities required for biosafety levels 1-4.
- Understand the basic parameters of bioterrorism and the current threats
- Understand the current CDC classification of select agents.
- Understand the basic biological characteristics of each select agent, their virulence mechanisms, and their interaction with various hosts.
- Understand how select agents have been used and could be used as bioweapons.
- _____
  (Individual – Please write your own in the space above)

MMBIO 528R : Current Topics in Pathogenesis. (1:1:0)
WHEN TAUGHT: Fall Even Yrs.; Winter
PREREQUISITE: MMBio 151, 221, 261 or equivalent.
RECOMMENDED: MMBio 364.
DESCRIPTION: Readings from current literature on pathogenesis; student presentations and discussion.

Course Outcomes
No outcomes are available at this time.

MMBIO 557 : Genes and Cancer. (2:2:0)
WHEN TAUGHT: Winter Odd Yrs.
PREREQUISITE: MMBio 441 or equivalent.
DESCRIPTION: Molecular basis of human cancers, emphasizing oncogenes, tumor suppressor genes, chromosomal instability, hereditary cancers, chemical and physical carcinogens, and viral carcinogenesis.

Course Outcomes
There are no course outcomes available

MMBIO 565 : Molecular Virology. (2:2:0)
WHEN TAUGHT: Winter Odd Yrs.
PREREQUISITE: MMBio 465 or equivalent.
DESCRIPTION: Molecular mechanisms of virus architecture, attachment and entry pathways, replication strategies, oncogenesis, evolution, and mechanisms of pathogenesis.

Course Outcomes
- Describe why viruses are organized and classified as they are.
- Describe viral replication on a molecular level for multiple virus types
- Explain how viruses cause disease, and the interactions between viruses and the host immune system.
- Describe how can viruses can be used as tools to study biological processes and for gene transfer. Use molecular tools to study viruses

NDFS 361 : Food Microbiology. (3:2:3)
WHEN TAUGHT: Fall
PREREQUISITE: MMBIO 221 & MMBIO 222
DESCRIPTION: Pathogenic and spoilage microorganisms in foods and their control. Beneficial microorganisms in food systems. Influence of the food system on growth and survival of microorganisms.

Course Outcomes
- Understand the growth requirements of common food borne pathogens and...Be able to attribute the characteristics of a food borne illness with unknown etiology to the most likely organism. Differentiate which organisms would be likely to grow in a specific food product
- Understand intrinsic and environmental aspects of foods and how they can be modified to affect the growth and metabolism of food borne microorganisms to include spoilage, pathogenic, and beneficial organisms.
- Carry out a series of laboratory experiments aimed at isolating and identifying common food borne microbial pathogens
- Classify spoilage microorganisms according to the food or foods they are most likely to affect based on the intrinsic and environmental characteristics of the food and compare to various storage methods to determine which method would be most appropriate for the given food product
- Design and carry out a laboratory experiment to evaluate the microbial safety of a common food product

PDBIO 220 : Human Anatomy (with lab). (3:2:2)
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Structure and function of the human body. Lab included.

Course Outcomes
- Students will demonstrate an understanding of the basic microscopic underpinnings of tissue structures and be able to name them.
- Students will demonstrate a greater understanding and appreciation for the human body, it's overall design and connections to other living organisms, and what a marvelous creation it is.
- Students will be able to list the name, location, and function of each of the body's organs and organ systems.

PDBIO 325 : Tissue Biology (with lab). (3:2:3)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: PDBIO 120 & PDBIO 220
DESCRIPTION: Human anatomy and histology; function of cells in tissue; early stages of embryology.
NOTE: Course should be taken during a student's second or third year and before courses in physiology and developmental biology.

Course Outcomes
- Students will be able to communicate with health professionals effectively regarding tissue/organ anatomy and physiology in instances of health and disease.
- Students will demonstrate how the relationship between cell organization and cell function correlates with normal and pathological organ behavior.
- Students will be able to describe anatomical and physiological characteristics of epithelial, connective, nervous, and muscular tissue.

PDBIO 360 : Cell Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Fundamentals of cell structure and function with reference to analytical methods used by cell biologists. Practice in designing, executing, and interpreting relative experiments.

Course Outcomes
- Students will demonstrate knowledge of the molecular architecture of the nucleus, including the nuclear envelope, nucleoplasm and nucleolus, chromatin, and the nuclear pore.
- Students will demonstrate an understanding of protein transport, including nuclear import and export and vesicular transport through the secretory and sorting pathways.
- Students will demonstrate knowledge of the molecular and cellular structure and dynamics of cytoskeletal systems.
- Students will be able to apply the basic cell biological principles in outcomes 1-3 to more complicated cellular processes, including cell adhesion, cell migration, cell polarity, cell division, cancer, and development.
- Students will demonstrate the ability to generate hypothesis about how cell biological systems work at the molecular level and design experiments that test that hypothesis.
- Students will demonstrate competence in interpreting original raw data from cell biology experiments, including microscopy, protein biochemistry, molecular biology, and genetics strategies
- Students will demonstrate the ability to critically evaluate primary cell biology literature, including the ability to evaluate the design and interpretation of experimental data.

PDBIO 362 : Advanced Physiology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220

DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.

NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes
- Students will manifest an understanding of how structures at the molecular level lead to properties associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

PDBIO 363 : Advanced Physiology Laboratory. (1:.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 362 or concurrent enrollment; or instructor's consent.

DESCRIPTION: Experiments and exercises in advanced physiology emphasizing human physiology. Computer simulations of muscle function, endocrine disease, and human physiology. Emphasizes problem solving and calculations.

Course Outcomes
- Students will demonstrate the skills required to properly interpret data from scientific experimentation to discover how physiological systems function.
- Students will manifest an understanding of basic physiological principles by modeling how human cells, organs, and organ systems function.
- Students will describe how interactions between human organ systems work to maintain homeostasis.

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes
- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

PWS 514 : Soil Microbiology. (2:2:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: Chem 105 and 106; or equivalents.

DESCRIPTION: Ecology and role of soil microorganisms in biogeochemical cycles, decomposition of organic matter and waste materials, and bioremediation of contaminated soils and water.

Course Outcomes
- Ecology and role of soil microorganisms in nutrient cycling, decomposition of organic matter and waste materials, and degradation of agricultural chemicals in soils

Note: Only 6 total credits of MMBio 194A, 194B, 399R, 470R, and 494R will count toward major hours with a 4 credit hour maximum for each individual course. (More credit hours may be taken but they will not count towards major requirements.)

or courses not chosen under item 3 above:

MMBIO 360 : Microbial Genetics. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBIO 240

DESCRIPTION: How DNA governs complex bacterial functions. Classical and modern approaches to gene discovery, including genetic screens, gene mapping, targeted genetic manipulations, and analyzing gene activity.

Course Outcomes
There are no course outcomes available

MMBIO 363 : Microbial Ecology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 130; or MMBIO 151; or PDBIO 120

DESCRIPTION: Natural history of a microbe; its distribution and abundance. Critical influence of scale and perspective in determining underlying mechanisms.

Course Outcomes
There are no course outcomes available

MMBIO 364 : Bacterial Pathogenesis. (4:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: MMBIO 261

DESCRIPTION: Fundamental principles of bacterial pathogenesis, emphasizing the molecular interactions of medically important bacteria and their hosts.

Course Outcomes
There are no course outcomes available

MMBIO 461 : Advanced Bacterial Physiology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481 & MMBIO 151

DESCRIPTION: Principles of prokaryotic physiology, including cell structure and function, gene regulation, and biochemical processes; focusing on the unique aspects of prokaryotic biology.

Course Outcomes
- Students will demonstrate an advanced understanding of selected topics in microbial physiology (cell structure, growth, biosynthesis, transport, etc.) through their participation in classroom discussions, writing assignments and oral presentations.
- Students will demonstrate the ability to read, comprehend and communicate current research in microbial physiology by making Powerpoint presentations to the class.
- Students will write a scientific review article on a topic of their choice related to microbial physiology.

MMBIO 463 : Immunology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & MMBIO 261

DESCRIPTION: Advanced concepts of immunological processes.

Course Outcomes
- Understanding advanced concepts of Immunology by studying and reflecting on the subject.*Relates to Program Learning Outcome: Exhibit mastery of four of the principle areas of the discipline
- Understands experimental designs used in immunology research and determine the soundness of the immunological data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Read and understand current publications in Immunology and be able to discuss and critically evaluate experiments and data*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Engage in discussions about concepts in immunology and research. Present a PowerPoint on a particular immunological topic. Engage in a question and answer session on the content. Write an easy on a chosen subject relating to recent immunological advances.*Relates to Program Learning Outcome: Communicate scientific information using both oral and written methods.
- Develop a deep appreciation for our Heavenly Father and his love for each of us by engaging in studying how he designed the immune system to protect his children from disease.*Relates to Program Learning Outcome: Reflect/ discuss/ explore how faith in the Lord, and Christ like living are affected by an understanding of the fundamental biological processes.

MMBIO 465 : Virology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBio 261 or equivalent.

DESCRIPTION: Basic principles of virology, emphasizing selected molecular aspects of virus life cycles and disease processes.

Course Outcomes
- Be able to answer basic questions about Virology: Why are viruses organized as they are? How do viruses replicate? How do viruses cause disease? What are the interactions between viruses and the host immune system? How to prevent/treat/cure viral infections? How can viruses be

used as tools to study biological processes and for gene transfer? How can an understanding of viruses help you in your future career? *Relates to Program Learning Outcome: "Exhibit mastery of four of the principal areas of the discipline", one of which is Virology.
- Understand experimental tools used to study viruses (these are broadly applicable to molecular biology, cell biology, and microbiology) and be able to develop experiments and interpret data.*Relates to Program Learning Outcomes: "Devise experiments with appropriate hypotheses and controls" and "Interpret experiments from primary scientific literature"
- Write about a current, pressing issue in the field of Virology.*Relates to Program Learning Outcome: "Communicate scientific information"
- Understand how research of viruses "by study and also by faith" can lead to alleviation of human disease and suffering.*Relates to Program Learning Outcome: "Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological processes"

8. Pass the Biology Major Field Exam.
9. Complete an exit interview.

Recommended Courses

ENGL 316 : Technical Communication. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: First-year writing, junior or senior status.
DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.
NOTE: Carries GE Advanced Written and Oral Communication credit.

Course Outcomes
- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 112.
DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

Course Outcomes
- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

PHSCS 107 : General Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Phscs 105 or concurrent enrollment.
DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 106 or concurrent enrollment
DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

Note: Students desiring a minor in chemistry must take Chem 223 and 2 hours of Chem 353.

*Hours include courses that may fulfill university core requirements.

1. Complete one of the following courses:

BIO 130 : Biology. (4:3:1)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: General biology course with laboratory for biology majors. Introduction to disciplines in the life sciences including methods for scientific inquiry, biochemical dynamics, cell structure and function, evolutionary theory, bioenergetics, and ecological interactions.

Course Outcomes

- Students will demonstrate basic literacy in the language of science and an understanding of the foundational theories of biology (i.e., be able to formulate appropriate hypotheses and predictions to test specific biological phenomena and use appropriate vocabulary to do so) o Atomic Molecular Theoryo Cell Theoryo Theories of Photosynthesis, Fermentation, and Cellular Respirationo Cell Division and Meiotic Theorieso Chromosomal and Mendelian Theories of Inheritanceo Watson and Crick's Theory of DNA Structure and Replicationo Protein Synthesis Theoryo Darwin's Theory of Natural Selectiono Hardy-Weinberg Theoryo Ecosystem Theoryo Population Growth Theoryo Competitive Exclusion and Behavioral Theory
- Students will demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strengths and weaknesses of this process.
- Students willappreciate the excitement of discovery that has accompanied important scientific developments.
- Students will demonstrate how scientific methodology can be used to analyze real-world science-related problems.
- Students will be able to evaluate scientific data and claims in order to make rational decisions on public-policy science issues that affect their community.
- Students will be able to express their thoughts (in oral, graphical, and written formats) on scientific topics clearly, including appropriate use of basic scientific vocabulary and effective interpretation of quantitative data.
- Students will be able to reflect rationally upon the interface between science and religion.
- Students will demonstrate sound scientific reasoning ability.

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes

There are no course outcomes available

2. Complete the following biology core courses:

BIO 420 : Evolutionary Biology. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PWS 340

RECOMMENDED: Concurrent enrollment in Bio 421.

DESCRIPTION: Intensive examination of evolution as the conceptual cornerstone of biology.

Course Outcomes

- Students will be able to describe the history and development of evolutionary thought.
- Students will be able to list and describe the evidence for evolution and its required corollaries.
- Students will be able to describe the mechanisms by which evolution occurs. Provide detailed explanations of the the processes of evolution by mutation, migration, genetic drift, non-random mating, and natural selection.
- Students will be able to explain adaptation, providing examples from several different fields of biology (e.g., cell biology, physiology, conservation biology, bioinformatics, medicine, behavior, etc.).
- Students will be able to describe the history of life on earth. Identify major evolutionary transitions over time, and explain the tools and evidence that support current hypotheses of the history of life.

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.

DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

MMBIO 241 : Molecular and Cellular Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBio 240 or concurrent enrollment.

DESCRIPTION: Molecular and cellular biology techniques laboratory.

Course Outcomes

- Practice ethics and integrity by working with groups and following lab rules.*Relates to Program Learning Outcome: A commitment to professional integrity and ethical behavior consistent with themission of the university.
- Learn the basics of experimental design, how to formulate a hypothesis, what controls to use, how to interpret experimental data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Practice scientific communication through written lab questions, exams and oral presentations.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Learn molecular biology laboratory techniques through practical laboratory exercises. Techniques include, spectrophotometry,isolation of DNA and protein, quantification of DNA and protein, techniques used to purify or detect specific proteins, such aschromatography, western blot and ELISA, DNA fingerprinting, polymerase chain reaction and enzyme assays.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology.

PDBIO 360 : Cell Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Fundamentals of cell structure and function with reference to analytical methods used by cell biologists. Practice in designing, executing, and interpreting relative experiments.

Course Outcomes

- Students will demonstrate knowledge of the molecular architecture of the nucleus, including the nuclear envelope, nucleoplasm and nucleolus, chromatin, and the nuclear pore.
- Students will demonstrate an understanding of protein transport, including nuclear import and export and vesicular transport through the secretory and sorting pathways.
- Students will demonstrate knowledge of the molecular and cellular structure and dynamics of cytoskeletal systems.
- Students will be able to apply the basic cell biological principles in outcomes 1-3 to more complicated cellular processes, including cell adhesion, cell migration, cell polarity, cell division, cancer, and development.
- Students will demonstrate the ability to generate hypothesis about how cell biological systems work at the molecular level and design experiments that test that hypothesis.
- Students will demonstrate competence in interpreting original raw data from cell biology experiments, including microscopy, protein biochemistry, molecular biology, and genetics strategies
- Students will demonstrate the ability to critically evaluate primary cell biology literature, including the ability to evaluate the design and interpretation of experimental data.

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes

- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

3. Complete the following molecular biology core courses:

MMBIO 390R : Readings in Molecular Biology. (1:1:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240

RECOMMENDED: PDBio 360.

DESCRIPTION: Selected readings in molecular biology.

Course Outcomes

- Become familiar with the current literature and techniques in molecular biology
- Gain experience in critically evaluating the current literature in molecular biology.
- Gain confidence in scientific presentations and discussions.

MMBIO 441 : Advanced Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & CHEM 352

DESCRIPTION: Molecular biology of gene structure and expression in prokaryotic and eukaryotic organisms.

Course Outcomes

- Learn molecular biology principles through study, lecture, and class discussion. An emphasis will be on understanding the experiments used to learn these principles.â ¨ *Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology preparing students for further education and/or employment.
- Apply the principles learned to design experiments and properly interpret experimental data.â ¨ *Relates to Program Learning Outcome: Proficiency in formulating research projects
- Present current research from the scientific literature.*Relates to Program Learning Outcomes: Communicate scientific information using oral methods; interpret, analyze and critique experiments from the primary scientific literature. Presenting research findings through effective oral and written presentations.
- Demonstrate integrity and ethical behavior during all class work.â ¨ *Relates to Program Learning Outcome: Commitment to professional integrity and ethical behavior consistent with the mission of the University.

MMBIO 442 : Advanced Molecular Biology Laboratory. (2:0:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 241; MMBio 441 or concurrent enrollment.

DESCRIPTION: Laboratory to accompany MMBio 441.

Course Outcomes

- Learn molecular biology laboratory techniques through hands-on experience. Techniques will include DNA and RNA isolation, PCR, microRNA isolation, northern blotting, RFLP analysis, site-directed mutagenisis, protein extraction and EMSA.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology
- Apply the techniques to design experiments with appropriate hypotheses and controls and properly interpret experimental data*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls
- Practice scientific communication and record-keeping through the completion of a laboratory notebook and answering written and oral questions and presentations.*Relates to Program Learning Outcome: Demonstrate Communication skills in presenting research findings through effective oral and written presentations.
- Design and carry out independent experiments*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls

MMBIO 468 : (MMBio-Bio-PWS) Genomics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PWS 340

DESCRIPTION: Current analysis of genes and genomes; computational and statistical approaches for analyzing genomic data, including genome sequencing and annotation, gene expression and the transcriptome, proteomics and functional genomics, and genetic variation and SNPs.

Course Outcomes

- Students can describe the technology and process used to sequence genomes (de novo and re-sequencing)
- Students can complete a series of exercises with data representing genomic experiments (analyze and interpret)
- Students can outline techniques and concepts for assessing genomic parameters such as methylation, gene expression, DNA-binding motifs, metagenomics, and comparative genomics.

MMBIO 490R : Molecular Biology Seminar. (1:1:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 441; Senior status.

DESCRIPTION: Critical examination of current literature and research in molecular biology.

Course Outcomes

- Describe the current research in the field of molecular biology
- Network and talk to prominent researchers in the field
- Analyze current research and experimental design.

4. Complete the following chemistry courses:

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed

treatment of thermodynamics and equilibria.
NOTE: Three lectures and one recitation section per week.

Course Outcomes
- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.
DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.
NOTE: Required for most students needing one year of general chemistry.

Course Outcomes
- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 351 : Organic Chemistry. (3:3:1)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: CHEM 105; or CHEM 111
DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.
NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes
- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: CHEM 351; or CHEM 351M
DESCRIPTION: Continuation of Chem 351.

Course Outcomes
- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Chem 352 or concurrent enrollment (preferred).
DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.
NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes
- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

CHEM 481 : Biochemistry. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.
NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes
- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

5. Complete the following:

PHSCS 105 : General Physics 1. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: High school algebra and trigonometry.
RECOMMENDED: Concurrent enrollment in Phscs 107.
DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes
There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 105 or equivalent.
RECOMMENDED: Concurrent enrollment in Phscs 108.
DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes
There are no course outcomes available

6. Complete one course from the following:

MATH 112 : Calculus 1. (4:5:0)
OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes
- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

*MATH 119 : Introduction to Calculus. (4:4:1)
OFFERED: Independent Study only.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 110 and Math 111; or equivalent.
DESCRIPTION: Introduction to plane analytic geometry and calculus.

Course Outcomes
- This course is designed to provide beginning undergraduate students a first exposure to Calculus concepts, theorems, and techniques. In general, theorems will not be proved. An understanding of the theorems and their applications to solve calculus problems will be taught. Students will be expected to develop effective problem solving skills based on their understanding of the theory and not just memorize a set of routines to solve problems. For a more detailed course description, visit the Math 119 Wiki page.

*Offered through BYU Independent Study.

7. Complete three credits total during two semesters of mentored research:

MMBIO 194A : Freshman Research Initiative 1. (2:0:6)
WHEN TAUGHT: Fall
PREREQUISITE: By application only.
DESCRIPTION: Phage isolation and characterization.
NOTE: For freshmen or sophomore students only. Requires two semester commitment.

Course Outcomes
- Use proper aseptic techniques for the transfer and handling of microorganisms and instruments.
- Use appropriate microbiological media and test systems.

- Use standard microbiology laboratory equipment correctly.
- Follow an experimental protocol, collect and organize data in a systematic fashion, present data in anappropriate form, assess the validity of the data, and draw appropriate conclusions based on the results.

MMBIO 194B : Freshman Research Initiative 2. (2:0:6)

WHEN TAUGHT: Winter
PREREQUISITE: MMBIO 194A
DESCRIPTION: Phage genome annotation. Focus on experimental design and data analysis.
NOTE: For freshmen or sophomore students only. Requires two semester commitment.

Course Outcomes
- Prepare DNA for sequencing
- Archive phage samples and DNA samples (submit archived phage to HHMI)
- Learn how to use bioinformatics software for the following:DNA sequence alignment (Consed)Primer design (Primer3)Assessing ORFs for gene calls (GBrowse, Glimmer and GeneMark)Homology assessment (BLAST and Phamerator)Annotation (Apollo)Comparative analysis (positional and functional)
- Analyze, annotate and prepare to submit genome to GenBank (submit if possible)
- Prepare an abstract for a presentation of research data
- Prepare and deliver a research presentation (oral and poster)
- Gain experience in research writing and reading of scientific papers

MMBIO 494R : Mentored Research. (.5-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Mentor's consent.
DESCRIPTION: Mentored research.

Course Outcomes
- Perform current techniques and carry out experiments in a professional manner. Gather data and evaluate results.
- Properly notate work and results in a scientific notebook. Participate in the preparation of scientific papers and presentations.
- Develop, design and troubleshoot experimental procedures.
- Form relationships with a research mentor and other students in the lab. Begin networking and professional activities.
- Read, and use primary literature to design experiements and advance a project. Present and evaluate articles from the primary literature

8. Complete at least 10 hours (one of which must include a lab) from the following:

BIO 463 : Genetics of Human Disease. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: PWS 340
DESCRIPTION: Examining the application of genetics to understanding and treatment of human disease. Functional consequences of mutations; use of model organisms; linkage and association analysis of complex traits; pharmacogenetics; ethical considerations.

Course Outcomes
- Understand and explain the different types of genetic variants, how they can be typed and how they can be used to understand the genetic architecture of human disease.
- Understand linkage disequilibrium in the human genome and the role it plays in the search for genetic risk factors for human disease
- Understand and use basic statistics and software for analyzing the correlation between genetic markers and risk for disease.
- Understand and explain how model organisms contribute to our understanding of the genetics of human disease.
- Demonstrate the ability to obtain, aggregate and present information about the current knowledge of the genetics of a human disease.

†BIO 465 : Bioinformatics and Proteomics. (3:2:1)

WHEN TAUGHT: Winter
PREREQUISITE: BIO 365
DESCRIPTION: 3-D protein structural comparisons, hidden Markov models for database comparisons, homology detection, multiple sequence analyses, and protein family comparisons. Exercises in computer programming in genomics.

Course Outcomes
- Students will learn and demonstrate mastery of advanced analytical bioinformatics techniques, including genome assembly, genome annotation, and protein analyses.
- Demonstrate ability to use and evaluate literature databases and primary literature directed to the bioinformatics community in terms of newly developed software, analytical algorithms, application to empirical data, etc.
- Apply and develop computational skills in secondary (i.e., helices, etc.) and tertiary (i.e., folding, etc.) prediction, and 3-dimensional (i.e., x-ray crystal structures, etc.) modeling of protein structures.
- Apply evolutionary concepts to modeling DNA/proteins to evaluate and/or predict function, utilizing 3D structures, physical and chemical amino acid properties, etc.
- Apply existing and develop new tools for genome assembly and annotation from next-generation DNA sequencing projects

CHEM 463 : Physical Chemistry. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: CHEM 462 & PHSCS 220
RECOMMENDED: Math 302.
DESCRIPTION: Thermodynamics and equilibria, states of matter, kinetic-molecular theory, kinetics, statistical mechanics.

Course Outcomes

- Demonstrate connections between molecular interactions and equations of state
- Describe physical and chemical phenomena in terms of molecular and bulk models and understand the limitations of these models
- Describe the kinetics of chemical reactions in terms of molecular mechanisms and empirical rate laws
- Apply the laws of thermodynamics to physical and chemical processes, including phase transitions, mixtures, chemical equilibrium, and electrochemical processes
- Analyze and interpret experimental data to draw conclusions about physical and chemical processes

CHEM 468 : Biophysical Chemistry. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481 & MATH 113 & PHSCS 220; or CHEM 481M & MATH 113 & PHSCS 220

DESCRIPTION: Applications of physical chemistry to biological systems. Spectroscopic applications, computational methods, structural biochemistry, thermodynamics, equilibria, statistical mechanics, transport properties, kinetics, quantum mechanics.

NOTE: For biochemistry (BS) majors and those interested in the health professions or biochemistry. (For prerequisites, Phscs 220 may be taken concurrently.)

Course Outcomes

- Describe conceptually the fundamental concepts in the four principal areas of physical chemistry: classical thermodynamics, statistical thermodynamics kinetics and quantum mechanics
- Define mathematically the concepts outlined in 1) and manipulate the fundamental and derived equations associated with these concepts
- Use the above skills to calculate or predict the equilibrium conditions or direction of spontaneous biochemical processes that are involved in metabolism or energy transfer events given appropriate thermodynamic data and initial system conditions
- Employ mathematical and graphical techniques on enzyme kinetic data to extract key parameters and to identify inhibition mechanisms
- Solve simple Schroedinger equation problems (e.g., particle in a box), identify boundary conditions, and explain the significance of boundary conditions on the observance of quantized effects
- Relate the simple Hamiltonians from above to biological molecules and systems and generalize from the simple results to make predictions regarding behavior in the biological systems
- Identify the nature of electronic energy levels in key photoactive biological molecules and use spectroscopic data to probe these levels
- Apply fundamental concepts of electronic structure and reaction kinetics to the steps in photosynthesis and vision
- Provide examples in which physical chemistry perspectives have enabled a deeper more complete understanding of the structure and function of biological molecules and complex biological systems

CHEM 482 : Mechanisms of Molecular Biology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Second-semester biochemistry. Nucleic acid biochemistry and molecular biology: nucleotide metabolism, chromosome and chromatin structure, DNA structure and replication, RNA transcription and gene expression, protein synthesis and regulation, eukaryotic gene systems, signal transduction.

Course Outcomes

- Draw the structure of DNA, determine the topology of a plasmid, explain the chemical sequence of events that occur during DNA replication and draw structural changes that occur due to mutation.
- Determine how to perform and interpret an electrophoresis separation of DNA fragments, southern blot, restriction map, polymerase chain reaction, and a DNA sequencing reaction with necessary controls.
- Design a DNA cloning strategy, explain controls necessary, and write procedural plan.
- Draw and explain the mechanism of RNA transcription and how RNA is processed, spliced, and regulated. Understand the basic mechanisms of transcriptional regulation using the example of transcription of genes necessary for cholesterol synthesis.
- Determine when and how to use techniques that involve RNA: Northern blots, quantitative PCR, microarrays, S1 nuclease and primer extension mapping of the transcriptional start with appropriate controls.
- Determine the sequence of amino acids in a protein from a series of nucleotides.
- Draw and explain the process of protein translation and how it is regulated.
- Determine where a protein is localized in a tissue or cell: interpret a western blot, protein fusion assays.
- Determine with what a protein interacts: Interpret gel shift assays, Chromatin Immunoprecipitation, DNA footprinting, and yeast two hybrid reporter assays.
- Maintain faith through challenges and ethical boundaries in reporting and interpreting data.

CHEM 581 : Advanced Biochemical Methodology 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 482

DESCRIPTION: Analytical and structural determination methods used in biochemical research, including mass spectrometry-based proteomics, immunotechniques, atomic force and electron microscopy, NMR and X-ray diffraction.

NOTE: One of two required courses for biochemistry graduate students. May be taken before or after Chem 583.

Course Outcomes

- Understand the theory, instrumentation and applications of proteomic, immunological and structural methods currently used to address important biochemical questions.
- Interpret and critique data from these techniques.
- Design appropriate experiments and apply these techniques to their own research problems.
- Recognize important technological advances in proteomic, immunological and structural methods.
- Present findings from the primary literature describing the application of these methods to significant biochemical questions in a professional manner.

†CHEM 584 : Biochemistry Laboratory/Proteins. (3:1:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Introduction to current biochemical research procedures including spectrophotometry, chromatography, electrophoresis, and immunological techniques. Protein over-expression;

isolation and characterization methods. Enzyme kinetics and protein-ligand interactions. Introduction to bioinformatics.

NOTE: May be taken before or after Chem 586.

Course Outcomes

- Apply spectroscopic techniques to analyze proteins, both their enzymatic and binding reactions
- Use gel electrophoresis and immunoblotting techniques to determine the presence and purity of proteins in biological samples
- Identify protein binding partners using co-immunoprecipitation methods
- Purify proteins using state-of-the-art separations methods
- Characterize an enzyme using steady state kinetics methods
- Use enzymes as analytical and diagnostic tools
- Properly record and interpret data
- Present data they have collected in an oral presentation and in a written scientific paper
- Understand ethical means of reporting results and giving proper credit to the work of others
- Measure ligand binding to proteins; determine dissociation constants and the degree of cooperativity.

†CHEM 586 : Biochemistry Laboratory/Nucleic Acids. (3:1:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 482

DESCRIPTION: Laboratory course covering major techniques involved in isolation, amplification, and cloning of recombinant DNA as well as isolation, synthesis, translation, and identification of RNA.

NOTE: May be taken before or after Chem 584.

Course Outcomes

- Understand, design and execute experiments using basic DNA manipulation procedures that include isolation, purification and modification of DNA
- Explain and perform PCR amplification and use this technique to detect the presence of DNA “targets”, DNA cloning (subcloning) and DNA sequencing
- Understand and explain how to isolate, quantitate and manipulate RNA
- Design and perform experiments to reverse transcribe RNA into complementary DNA (cDNA) and assess gene expression by semi- and quantitative PCR
- Isolate total RNA and be able to purify mRNA from this material
- Introduce and express foreign DNA and/or RNA in mammalian cells using the techniques of electroporation, lipid-based transfection, calcium phosphate based transfection and retroviral transduction
- “Knockdown” an expressed gene in mammalian cells using RNA silencing
- Prepare laboratory notebooks that include the objective, results and methods of each laboratory experiment. Additionally, students will provide conclusions to each experiment, including when appropriate, potential explanations to unexpected results

†MMBIO 151 : Introduction to Microbiology. (4:3:3)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Chem 105 or concurrent enrollment.

DESCRIPTION: Principles of prokaryotic biology emphasizing cell structure, function, and metabolism. Introduction to bacterial genetics, microbial diversity, and microbial ecology.

Course Outcomes

- Understand what microbes are, what they are composed of, how they are built, and their phylogenetic relationships to the living world. Be able to distinguish between eukaryotes, prokaryotes, and viruses.*Relates to Program Learning Outcome: "Exhibit mastery of four of the following six principal areas of the discipline" five of which are microbial physiology, microbial genetics, microbial ecology, medical microbiology, and virology
- Become familiar with the tools of microbiology through both lecture and labs and demonstrate basic aseptic technique. Develop proficiency in working with bacteria including streaking for isolation and performing growth experiments.*Relates to Program Learning Outcome: "Exhibit mastery of four of the following six principal areas of the discipline" three of which are microbial physiology, microbial genetics, microbial ecology
- Formulate questions, testable hypotheses and implement appropriate experimental protocol. Collect and analyze data and be able to draw appropriate conclusions.*Relates to Program Learning Outcome: “Devise experiments with appropriate hypotheses and controls.”
- Integrate knowledge to make informed judgments on tests, lab reports, lab presentations and lab write-ups*Relates to Program Learning Outcome: "Communicate scientific information using both oral and written methods"
- Obtain a deeper appreciation for the complexity, diversity and purposes of life.*Relates to Program Learning Outcome: "Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological principles"

MMBIO 194A : Freshman Research Initiative 1. (2:0:6)

WHEN TAUGHT: Fall

PREREQUISITE: By application only.

DESCRIPTION: Phage isolation and characterization.

NOTE: For freshmen or sophomore students only. Requires two semester commitment.

Course Outcomes

- Use proper aseptic techniques for the transfer and handling of microorganisms and instruments.
- Use appropriate microbiological media and test systems.
- Use standard microbiology laboratory equipment correctly.
- Follow an experimental protocol, collect and organize data in a systematic fashion, present data in anappropriate form, assess the validity of the data, and draw appropriate conclusions based on the results.

MMBIO 194B : Freshman Research Initiative 2. (2:0:6)

WHEN TAUGHT: Winter

PREREQUISITE: MMBIO 194A

DESCRIPTION: Phage genome annotation. Focus on experimental design and data analysis.

NOTE: For freshmen or sophomore students only. Requires two semester commitment.

Course Outcomes

- Prepare DNA for sequencing
- Archive phage samples and DNA samples (submit archived phage to HHMI)
- Learn how to use bioinformatics software for the following:DNA sequence alignment (Consed)Primer design (Primer3)Assessing ORFs for gene calls (GBrowse, Glimmer and GeneMark)Homology assessment (BLAST and Phamerator)Annotation (Apollo)Comparative analysis (positional and functional)
- Analyze, annotate and prepare to submit genome to GenBank (submit if possible)
- Prepare an abstract for a presentation of research data
- Prepare and deliver a research presentation (oral and poster)
- Gain experience in research writing and reading of scientific papers

MMBIO 261 : Infection and Immunity. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Principles of infectious organisms (principally bacteria and viruses), the diseases they cause, and the role of host immune responses in health and disease.

Course Outcomes

There are no course outcomes available

†MMBIO 360 : Microbial Genetics. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBIO 240

DESCRIPTION: How DNA governs complex bacterial functions. Classical and modern approaches to gene discovery, including genetic screens, gene mapping, targeted genetic manipulations, and analyzing gene activity.

Course Outcomes

There are no course outcomes available

MMBIO 362R : Careers in Biomedical Sciences. (1:ARR:ARR)

WHEN TAUGHT: Fall

DESCRIPTION: Lectures and field trips surveying career choices.

Course Outcomes

- Students should be able to make informed decisions about career paths in Microbiology

†MMBIO 364 : Bacterial Pathogenesis. (4:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: MMBIO 261

DESCRIPTION: Fundamental principles of bacterial pathogenesis, emphasizing the molecular interactions of medically important bacteria and their hosts.

Course Outcomes

There are no course outcomes available

MMBIO 399R : Academic Internship. (1-9:0:40)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

DESCRIPTION: Approved experiential learning.

Course Outcomes

- Students will be able to design and perform experiements using the latest techniques.
- Students will analyze experimental results and draw conclusions.
- Students will communicate with supervisors and collegues in an outside the university environment. They will present their scientific research.

MMBIO 430 : Advanced Cell Biology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 360; Bioscience major status.

DESCRIPTION: Molecular genetics, cell biology, and developmental biology.

Course Outcomes

- Read primary literature to further their own understanding of the topic*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Explain the processes of cell biology*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Apply knowledge of these molecular processes to broader topics*Relates to Program Learning Outcome: Proficiency in formulating and carrying out independent and collaborative research projects.
- Analyze research data, design experiments and present data in a clear manner*Relates to Program Learning Outcome: Communication skills in presenting their research findings through effective oral and written presentations.

MMBIO 463 : Immunology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & MMBIO 261

DESCRIPTION: Advanced concepts of immunological processes.

Course Outcomes

- Understanding advanced concepts of Immunology by studying and reflecting on the subject.*Relates to Program Learning Outcome: Exhibit mastery of four of the principle areas of the discipline

- Understands experimental designs used in immunology research and determine the soundness of the immunological data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Read and understand current publications in Immunology and be able to discuss and critically evaluate experiments and data*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Engage in discussions about concepts in immunology and research. Present a PowerPoint on a particular immunological topic. Engage in a question and answer session on the content. Write an easy on a chosen subject relating to recent immunological advances.*Relates to Program Learning Outcome: Communicate scientific information using both oral and written methods.
- Develop a deep appreciation for our Heavenly Father and his love for each of us by engaging in studying how he designed the immune system to protect his children from disease.*Relates to Program Learning Outcome: Reflect/ discuss/ explore how faith in the Lord, and Christ like living are affected by an understanding of the fundamental biological processes.

MMBIO 465 : Virology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBio 261 or equivalent.

DESCRIPTION: Basic principles of virology, emphasizing selected molecular aspects of virus life cycles and disease processes.

Course Outcomes
- Be able to answer basic questions about Virology: Why are viruses organized as they are? How do viruses replicate? How do viruses cause disease? What are the interactions between viruses and the host immune system? How to prevent/treat/cure viral infections? How can viruses be used as tools to study biological processes and for gene transfer? How can an understanding of viruses help you in your future career? *Relates to Program Learning Outcome: “Exhibit mastery of four of the principal areas of the discipline”, one of which is Virology.
- Understand experimental tools used to study viruses (these are broadly applicable to molecular biology, cell biology, and microbiology) and be able to develop experiments and interpret data.*Relates to Program Learning Outcomes: “Devise experiments with appropriate hypotheses and controls” and “Interpret experiments from primary scientific literature”
- Write about a current, pressing issue in the field of Virology.*Relates to Program Learning Outcome: “Communicate scientific information”
- Understand how research of viruses “by study and also by faith” can lead to alleviation of human disease and suffering.*Relates to Program Learning Outcome: “Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological processes”

†MMBIO 466 : Virology Laboratory. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: MMBio 261; or MMBio 465 or concurrent enrollment.

DESCRIPTION: Laboratory exercises illustrating in vitro behavior of selected viruses. Developing laboratory skills for virus studies.

Course Outcomes
- Be able to gain hands-on experience in the ability to characterize various aspects of viral infections based upon cultured eukaryotic cells.
- Be able to titrate virus stocks.
- Be able to determine if a human has been previously exposed to a specific virus by perform serological tests.

†MMBIO 467 : Immunology Lab. (1:0:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBio 261; or 463 or concurrent enrollment.

DESCRIPTION: Laboratory exercises in advanced concepts of immunological processes.

Course Outcomes
- Maintain a research lab book with experimental protocol, data, and discussion of results.
- Understand advanced laboratory concepts of Immunology by completing protocols and experiments
- Understand experimental design used in immunology research and determine the soundness of immunological data according to the design and controls used in the experiment.
- Obtain and interpret experimental data.
- Expand the student's understanding of immunology research and acknowledge the miracle of immunological processes. Develop good social skills through participation in laboratory experiments with other students.

MMBIO 470R : Synthetic Biology. (1-2:Arr:Arr)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; Application and interview.

DESCRIPTION: Students are introduced to concepts of synthetic biology and then conceptualize, design, build, and characterize a genetically engineered machine. The class culminates in presentations at the IBE Western regional and IGEM regional conferences in October.

Course Outcomes
There are no course outcomes available

MMBIO 494R : Mentored Research. (.5-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

DESCRIPTION: Mentored research.

Course Outcomes
- Perform current techniques and carry out experiments in a professional manner. Gather data and evaluate results.
- Properly notate work and results in a scientific notebook. Participate in the preparation of scientific papers and presentations.
- Develop, design and troubleshoot experimental procedures.

- Form relationships with a research mentor and other students in the lab. Begin networking and professional activities.
- Read, and use primary literature to design experiements and advance a project. Present and evaluate articles from the primary literature

MMBIO 510 : History of Microbiology and Molecular Biology. (2:2:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: Any one 400-level MMBio course.

DESCRIPTION: Exploring the lives and historical settings of major contributors to the development of the sciences of microbiology and molecular biology emphasizing the importance of their ground-breaking discoveries in both basic and applied science.

Course Outcomes
- The objective of this course is to examine the lives and accomplishments of a few of our science ancestors creating a clearer perspective of our place in the constellation of our science.

MMBIO 513 : Philosophy of Biology. (2:2:0)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: MMBio 360 or 363 or 461 or equivalent.

DESCRIPTION: Epistemological, metaphysical, and ethical issues in the biological sciences. Philosophical questions concerning the theory of evolution, debate between evolution and creationism, fitness, adaptationism, the units of selection, systematics, sociobiology, and evolutionary ethics.

Course Outcomes
- Students will read and analyze historically relevant scientific primary literature
- Students will explain philisophical concepts underyling biology
- Students will use philisophical principles to discuss and evaluate ethical issues in biology

MMBIO 515 : RNA-Mediated Gene Regulation. (2:2:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: MMBio 441 or equivalent.

DESCRIPTION: Current advances in studies on RNA processing, including RNA splicing and editing, riboswitches, ribozymes, and the role of small RNAs in RNA interference and regulation of gene expression.

Course Outcomes
- Understand the current approaches and advances in RNA-mediated gene regulation research.
- Read and comprehend reports in the current scientific literature regarding RNA-mediated gene regulation.
- Develop skills in making effective scientific presentations using high standards of clarity, relevance, and logic.

MMBIO 518 : Select Pathogens. (2:2:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: MMBio 221 or equivalent.

DESCRIPTION: Current literature in special pathogens.

Course Outcomes
- Understand the procedures, practices, and facilities required for biosafety levels 1-4.
- Understand the basic parameters of bioterrorism and the current threats
- Understand the current CDC classification of select agents.
- Understand the basic biological characteristics of each select agent, their virulence mechanisms, and their interaction with various hosts.
- Understand how select agents have been used and could be used as bioweapons.
- _____ (Individual – Please write your own in the space above)

MMBIO 528R : Current Topics in Pathogenesis. (1:1:0)

WHEN TAUGHT: Fall Even Yrs.; Winter

PREREQUISITE: MMBio 151, 221, 261 or equivalent.

RECOMMENDED: MMBio 364.

DESCRIPTION: Readings from current literature on pathogenesis; student presentations and discussion.

Course Outcomes
No outcomes are available at this time.

MMBIO 557 : Genes and Cancer. (2:2:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: MMBio 441 or equivalent.

DESCRIPTION: Molecular basis of human cancers, emphasizing oncogenes, tumor suppressor genes, chromosomal instability, hereditary cancers, chemical and physical carcinogens, and viral carcinogenesis.

Course Outcomes
There are no course outcomes available

MMBIO 565 : Molecular Virology. (2:2:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: MMBio 465 or equivalent.

DESCRIPTION: Molecular mechanisms of virus architecture, attachment and entry pathways, replication strategies, oncogenesis, evolution, and mechanisms of pathogenesis.

Course Outcomes

- Describe why viruses are organized and classified as they are.
- Describe viral replication on a molecular level for multiple virus types
- Explain how viruses cause disease, and the interactions between viruses and the host immune system.
- Describe how can viruses can be used as tools to study biological processes and for gene transfer. Use molecular tools to study viruses

†PDBIO 220 : Human Anatomy (with lab). (3:2:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Structure and function of the human body. Lab included.

Course Outcomes

- Students will demonstrate an understanding of the basic microscopic underpinnings of tissue structures and be able to name them.
- Students will demonstrate a greater understanding and appreciation for the human body, it's overall design and connections to other living organisms, and what a marvelous creation it is.
- Students will be able to list the name, location, and function of each of the body's organs and organ systems.

†PDBIO 325 : Tissue Biology (with lab). (3:2:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120 & PDBIO 220

DESCRIPTION: Human anatomy and histology; function of cells in tissue; early stages of embryology.

NOTE: Course should be taken during a student's second or third year and before courses in physiology and developmental biology.

Course Outcomes

- Students will be able to communicate with health professionals effectively regarding tissue/organ anatomy and physiology in instances of health and disease.
- Students will demonstrate how the relationship between cell organization and cell function correlates with normal and pathological organ behavior.
- Students will be able to describe anatomical and physiological characteristics of epithelial, connective, nervous, and muscular tissue.

PDBIO 362 : Advanced Physiology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220

DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.

NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes

- Students will manifest an understanding of how structures at the molecular level lead to properties associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

PDBIO 363 : Advanced Physiology Laboratory. (1:.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 362 or concurrent enrollment; or instructor's consent.

DESCRIPTION: Experiments and exercises in advanced physiology emphasizing human physiology. Computer simulations of muscle function, endocrine disease, and human physiology. Emphasizes problem solving and calculations.

Course Outcomes

- Students will demonstrate the skills required to properly interpret data from scientific experimentation to discover how physiological systems function.
- Students will manifest an understanding of basic physiological principles by modeling how human cells, organs, and organ systems function.
- Students will describe how interactions between human organ systems work to maintain homeostasis.

†PDBIO 482 : Developmental Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PDBIO 360

RECOMMENDED: PDBio 325.

DESCRIPTION: Invertebrate and vertebrate developmental biology. Embryonic gastrulation, neurulation, pattering, etc. Modern approaches and research strategies. Emphasizes gene function, cell signaling, signal transduction during embryogenesis.

Course Outcomes

- Students will be able to generally describe the early development (from fertilization to axis formation) of one invertebrate and one vertebrate model organism.
- Students will be able to generally describe the concepts of cellular competence, induction, specification, commitment and differentiation in embryonic development.
- Students will be able to give two examples of organogenesis, including genes and signal transduction pathways that lead to organ system formation.
- Students will be able to explain embryonic patterning, using examples that include genes known to act in patterning events.
- Students will be able to explain at least two concepts in developmental biology that overlap with other sciences, such as stem cell research, cancer research, evolutionary sciences, or neuroscience.
- Students will be able to discern and summarize the current state of knowledge on a given topic, construct pioneering research questions on that topic, and propose experiments aimed at answering those questions.

†PDBIO 582 : Developmental Genetics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PDBio 482 or equivalent.

DESCRIPTION: Gene function and regulation during cell specification and differentiation, pattern formation, and organogenesis in developing embryo.

Course Outcomes

- Students will demonstrate understanding of, and the ability to think critically about, primary developmental biology research articles.
- Students will demonstrate confidence in contributing to scientific discussions.
- Students will demonstrate the ability to think scientifically by formulating a research proposal.

Note 1: Only 6 total credit hours of MMBio 194A, 194B, 399R, 470R, and 494R will count toward major hours with a 4 credit hour maximum for each individual course. (More credit hours may be taken but they will not count towards major requirements.)
Note 2: † indicates a course with a lab included.

9. Pass the Biology Major Field Exam.
10. Complete an exit interview.

Recommended Courses

ENGL 316 : Technical Communication. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: First-year writing, junior or senior status.

DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.

NOTE: Carries GE Advanced Written and Oral Communication credit.

Course Outcomes

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

PHSCS 107 : General Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 105 or concurrent enrollment.

DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

Course Outcomes

- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 106 or concurrent enrollment

DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

Course Outcomes

- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and

acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

*Hours include courses that may fulfill university core requirements.

1. Complete the following:

MMBIO 151 : Introduction to Microbiology. (4:3:3)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Chem 105 or concurrent enrollment.

DESCRIPTION: Principles of prokaryotic biology emphasizing cell structure, function, and metabolism. Introduction to bacterial genetics, microbial diversity, and microbial ecology.

Course Outcomes

- Understand what microbes are, what they are composed of, how they are built, and their phylogenetic relationships to the living world. Be able to distinguish between eukaryotes, prokaryotes, and viruses.*Relates to Program Learning Outcome: "Exhibit mastery of four of the following six principal areas of the discipline" five of which are microbial physiology, microbial genetics, microbial ecology, medical microbiology, and virology
- Become familiar with the tools of microbiology through both lecture and labs and demonstrate basic aseptic technique. Develop proficiency in working with bacteria including streaking for isolation and performing growth experiments.*Relates to Program Learning Outcome: "Exhibit mastery of four of the following six principal areas of the discipline" three of which are microbial physiology, microbial genetics, microbial ecology
- Formulate questions, testable hypotheses and implement appropriate experimental protocol. Collect and analyze data and be able to draw appropriate conclusions.*Relates to Program Learning Outcome: “Devise experiments with appropriate hypotheses and controls.”
- Integrate knowledge to make informed judgments on tests, lab reports, lab presentations and lab write-ups*Relates to Program Learning Outcome: "Communicate scientific information using both oral and written methods"
- Obtain a deeper appreciation for the complexity, diversity and purposes of life.*Relates to Program Learning Outcome: "Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological principles"

MMBIO 261 : Infection and Immunity. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Principles of infectious organisms (principally bacteria and viruses), the diseases they cause, and the role of host immune responses in health and disease.

Course Outcomes

There are no course outcomes available

2. Complete two courses from the following (at least one must have a lab component):

MMBIO 360 : Microbial Genetics. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBIO 240

DESCRIPTION: How DNA governs complex bacterial functions. Classical and modern approaches to gene discovery, including genetic screens, gene mapping, targeted genetic manipulations, and analyzing gene activity.

Course Outcomes

There are no course outcomes available

MMBIO 363 : Microbial Ecology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 130; or MMBIO 151; or PDBIO 120

DESCRIPTION: Natural history of a microbe; its distribution and abundance. Critical influence of scale and perspective in determining underlying mechanisms.

Course Outcomes

There are no course outcomes available

MMBIO 364 : Bacterial Pathogenesis. (4:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: MMBIO 261

DESCRIPTION: Fundamental principles of bacterial pathogenesis, emphasizing the molecular interactions of medically important bacteria and their hosts.

Course Outcomes

There are no course outcomes available

MMBIO 461 : Advanced Bacterial Physiology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481 & MMBIO 151

DESCRIPTION: Principles of prokaryotic physiology, including cell structure and function, gene regulation, and biochemical processes; focusing on the unique aspects of prokaryotic biology.

Course Outcomes

- Students will demonstrate an advanced understanding of selected topics in microbial physiology (cell structure, growth, biosynthesis, transport, etc.) through their participation in classroom discussions, writing assignments and oral presentations.
- Students will demonstrate the ability to read, comprehend and communicate current research in microbial physiology by making Powerpoint presentations to the class.
- Students will write a scientific review article on a topic of their choice related to microbial physiology.

MMBIO 463 : Immunology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & MMBIO 261

DESCRIPTION: Advanced concepts of immunological processes.

Course Outcomes

- Understanding advanced concepts of Immunology by studying and reflecting on the subject.*Relates to Program Learning Outcome: Exhibit mastery of four of the principle areas of the discipline
- Understands experimental designs used in immunology research and determine the soundness of the immunological data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Read and understand current publications in Immunology and be able to discuss and critically evaluate experiments and data*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Engage in discussions about concepts in immunology and research. Present a PowerPoint on a particular immunological topic. Engage in a question and answer session on the content. Write an easy on a chosen subject relating to recent immunological advances.*Relates to Program Learning Outcome: Communicate scientific information using both oral and written methods.
- Develop a deep appreciation for our Heavenly Father and his love for each of us by engaging in studying how he designed the immune system to protect his children from disease.*Relates to Program Learning Outcome: Reflect/ discuss/ explore how faith in the Lord, and Christ like living are affected by an understanding of the fundamental biological processes.

MMBIO 465 : Virology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBio 261 or equivalent.

DESCRIPTION: Basic principles of virology, emphasizing selected molecular aspects of virus life cycles and disease processes.

Course Outcomes

- Be able to answer basic questions about Virology: Why are viruses organized as they are? How do viruses replicate? How do viruses cause disease? What are the interactions between viruses and the host immune system? How to prevent/treat/cure viral infections? How can viruses be used as tools to study biological processes and for gene transfer? How can an understanding of viruses help you in your future career? *Relates to Program Learning Outcome: “Exhibit mastery of four of the principal areas of the discipline”, one of which is Virology.
- Understand experimental tools used to study viruses (these are broadly applicable to molecular biology, cell biology, and microbiology) and be able to develop experiments and interpret data.*Relates to Program Learning Outcomes: “Devise experiments with appropriate hypotheses and controls” and “Interpret experiments from primary scientific literature”
- Write about a current, pressing issue in the field of Virology.*Relates to Program Learning Outcome: “Communicate scientific information”
- Understand how research of viruses “by study and also by faith” can lead to alleviation of human disease and suffering.*Relates to Program Learning Outcome: “Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological processes”

1. Complete the following:

MMBIO 441 : Advanced Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: MMBIO 240 & CHEM 352
DESCRIPTION: Molecular biology of gene structure and expression in prokaryotic and eukaryotic organisms.

Course Outcomes

- Learn molecular biology principles through study, lecture, and class discussion. An emphasis will be on understanding the experiments used to learn these principles.â ¨ *Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology preparing students for further education and/or employment.
- Apply the principles learned to design experiments and properly interpret experimental data.â ¨ *Relates to Program Learning Outcome: Proficiency in formulating research projects
- Present current research from the scientific literature.*Relates to Program Learning Outcomes: Communicate scientific information using oral methods; interpret, analyze and critique experiments from the primary scientific literature. Presenting research findings through effective oral and written presentations.
- Demonstrate integrity and ethical behavior during all class work.â ¨ *Relates to Program Learning Outcome: Commitment to professional integrity and ethical behavior consistent with the mission of the University.

MMBIO 442 : Advanced Molecular Biology Laboratory. (2:0:6)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: MMBIO 241; MMBio 441 or concurrent enrollment.
DESCRIPTION: Laboratory to accompany MMBio 441.

Course Outcomes

- Learn molecular biology laboratory techniques through hands-on experience. Techniques will include DNA and RNA isolation, PCR, microRNA isolation, northern blotting, RFLP analysis, site-directed mutagenisis, protein extraction and EMSA.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology
- Apply the techniques to design experiments with appropriate hypotheses and controls and properly interpret experimental data*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls
- Practice scientific communication and record-keeping through the completion of a laboratory notebook and answering written and oral questions and presentations.*Relates to Program Learning Outcome: Demonstrate Communication skills in presenting research findings through effective oral and written presentations.
- Design and carry out independent experiments*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls

MMBIO 468 : (MMBio-Bio-PWS) Genomics. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: MMBIO 240 & PWS 340
DESCRIPTION: Current analysis of genes and genomes; computational and statistical approaches for analyzing genomic data, including genome sequencing and annotation, gene expression and the transcriptome, proteomics and functional genomics, and genetic variation and SNPs.

Course Outcomes

- Students can describe the technology and process used to sequence genomes (de novo and re-sequencing)
- Students can complete a series of exercises with data representing genomic experiments (analyze and interpret)
- Students can outline techniques and concepts for assessing genomic parameters such as methylation, gene expression, DNA-binding motifs, metagenomics, and comparative genomics.

2. Complete at least 6 hours from the following:

BIO 463 : Genetics of Human Disease. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: PWS 340
DESCRIPTION: Examining the application of genetics to understanding and treatment of human disease. Functional consequences of mutations; use of model organisms; linkage and association analysis of complex traits; pharmacogenetics; ethical considerations.

Course Outcomes

- Understand and explain the different types of genetic variants, how they can be typed and how they can be used to understand the genetic architecture of human disease.
- Understand linkage disequilibrium in the human genome and the role it plays in the search for genetic risk factors for human disease
- Understand and use basic statistics and software for analyzing the correlation between genetic markers and risk for disease.
- Understand and explain how model organisms contribute to our understanding of the genetics of human disease.
- Demonstrate the ability to obtain, aggregate and present information about the current knowledge of the genetics of a human disease.

BIO 465 : Bioinformatics and Proteomics. (3:2:1)

WHEN TAUGHT: Winter

PREREQUISITE: BIO 365

DESCRIPTION: 3-D protein structural comparisons, hidden Markov models for database comparisons, homology detection, multiple sequence analyses, and protein family comparisons. Exercises in computer programming in genomics.

Course Outcomes

- Students will learn and demonstrate mastery of advanced analytical bioinformatics techniques, including genome assembly, genome annotation, and protein analyses.
- Demonstrate ability to use and evaluate literature databases and primary literature directed to the bioinformatics community in terms of newly developed software, analytical algorithms, application to empirical data, etc.
- Apply and develop computational skills in secondary (i.e., helices, etc.) and tertiary (i.e., folding, etc.) prediction, and 3-dimensional (i.e., x-ray crystal structures, etc.) modeling of protein structures.
- Apply evolutionary concepts to modeling DNA/proteins to evaluate and/or predict function, utilizing 3D structures, physical and chemical amino acid properties, etc.
- Apply existing and develop new tools for genome assembly and annotation from next-generation DNA sequencing projects

CHEM 463 : Physical Chemistry. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 462 & PHSCS 220

RECOMMENDED: Math 302.

DESCRIPTION: Thermodynamics and equilibria, states of matter, kinetic-molecular theory, kinetics, statistical mechanics.

Course Outcomes

- Demonstrate connections between molecular interactions and equations of state
- Describe physical and chemical phenomena in terms of molecular and bulk models and understand the limitations of these models
- Describe the kinetics of chemical reactions in terms of molecular mechanisms and empirical rate laws
- Apply the laws of thermodynamics to physical and chemical processes, including phase transitions, mixtures, chemical equilibrium, and electrochemical processes
- Analyze and interpret experimental data to draw conclusions about physical and chemical processes

CHEM 468 : Biophysical Chemistry. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481 & MATH 113 & PHSCS 220; or CHEM 481M & MATH 113 & PHSCS 220

DESCRIPTION: Applications of physical chemistry to biological systems. Spectroscopic applications, computational methods, structural biochemistry, thermodynamics, equilibria, statistical mechanics, transport properties, kinetics, quantum mechanics.

NOTE: For biochemistry (BS) majors and those interested in the health professions or biochemistry. (For prerequisites, Phscs 220 may be taken concurrently.)

Course Outcomes

- Describe conceptually the fundamental concepts in the four principal areas of physical chemistry: classical thermodynamics, statistical thermodynamics kinetics and quantum mechanics
- Define mathematically the concepts outlined in 1) and manipulate the fundamental and derived equations associated with these concepts
- Use the above skills to calculate or predict the equilibrium conditions or direction of spontaneous biochemical processes that are involved in metabolism or energy transfer events given appropriate thermodynamic data and initial system conditions
- Employ mathematical and graphical techniques on enzyme kinetic data to extract key parameters and to identify inhibition mechanisms
- Solve simple Schroedinger equation problems (e.g., particle in a box), identify boundary conditions, and explain the significance of boundary conditions on the observance of quantized effects
- Relate the simple Hamiltonians from above to biological molecules and systems and generalize from the simple results to make predictions regarding behavior in the biological systems
- Identify the nature of electronic energy levels in key photoactive biological molecules and use spectroscopic data to probe these levels
- Apply fundamental concepts of electronic structure and reaction kinetics to the steps in photosynthesis and vision
- Provide examples in which physical chemistry perspectives have enabled a deeper more complete understanding of the structure and function of biological molecules and complex biological systems

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes

- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below

- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

CHEM 482 : Mechanisms of Molecular Biology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Second-semester biochemistry. Nucleic acid biochemistry and molecular biology: nucleotide metabolism, chromosome and chromatin structure, DNA structure and replication, RNA transcription and gene expression, protein synthesis and regulation, eukaryotic gene systems, signal transduction.

Course Outcomes

- Draw the structure of DNA, determine the topology of a plasmid, explain the chemical sequence of events that occur during DNA replication and draw structural changes that occur due to mutation.
- Determine how to perform and interpret an electrophoresis separation of DNA fragments, southern blot, restriction map, polymerase chain reaction, and a DNA sequencing reaction with necessary controls.
- Design a DNA cloning strategy, explain controls necessary, and write procedural plan.
- Draw and explain the mechanism of RNA transcription and how RNA is processed, spliced, and regulated. Understand the basic mechanisms of transcriptional regulation using the example of transcription of genes necessary for cholesterol synthesis.
- Determine when and how to use techniques that involve RNA: Northern blots, quantitative PCR, microarrays, S1 nuclease and primer extension mapping of the transcriptional start with appropriate controls.
- Determine the sequence of amino acids in a protein from a series of nucleotides.
- Draw and explain the process of protein translation and how it is regulated.
- Determine where a protein is localized in a tissue or cell: interpret a western blot, protein fusion assays.
- Determine with what a protein interacts: Interpret gel shift assays, Chromatin Immunoprecipitation, DNA footprinting, and yeast two hybrid reporter assays.
- Maintain faith through challenges and ethical boundaries in reporting and interpreting data.

CHEM 581 : Advanced Biochemical Methodology 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 482

DESCRIPTION: Analytical and structural determination methods used in biochemical research, including mass spectrometry-based proteomics, immunotechniques, atomic force and electron microscopy, NMR and X-ray diffraction.

NOTE: One of two required courses for biochemistry graduate students. May be taken before or after Chem 583.

Course Outcomes

- Understand the theory, instrumentation and applications of proteomic, immunological and structural methods currently used to address important biochemical questions.
- Interpret and critique data from these techniques.
- Design appropriate experiments and apply these techniques to their own research problems.
- Recognize important technological advances in proteomic, immunological and structural methods.
- Present findings from the primary literature describing the application of these methods to significant biochemical questions in a professional manner.

CHEM 584 : Biochemistry Laboratory/Proteins. (3:1:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Introduction to current biochemical research procedures including spectrophotometry, chromatography, electrophoresis, and immunological techniques. Protein over-expression; isolation and characterization methods. Enzyme kinetics and protein-ligand interactions. Introduction to bioinformatics.

NOTE: May be taken before or after Chem 586.

Course Outcomes

- Apply spectroscopic techniques to analyze proteins, both their enzymatic and binding reactions
- Use gel electrophoresis and immunoblotting techniques to determine the presence and purity of proteins in biological samples
- Identify protein binding partners using co-immunoprecipitation methods
- Purify proteins using state-of-the-art separations methods
- Characterize an enzyme using steady state kinetics methods
- Use enzymes as analytical and diagnostic tools
- Properly record and interpret data
- Present data they have collected in an oral presentation and in a written scientific paper
- Understand ethical means of reporting results and giving proper credit to the work of others
- Measure ligand binding to proteins; determine dissociation constants and the degree of cooperativity.

CHEM 586 : Biochemistry Laboratory/Nucleic Acids. (3:1:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 482

DESCRIPTION: Laboratory course covering major techniques involved in isolation, amplification, and cloning of recombinant DNA as well as isolation, synthesis, translation, and identification of RNA.

NOTE: May be taken before or after Chem 584.

Course Outcomes

- Understand, design and execute experiments using basic DNA manipulation procedures that include isolation, purification and modification of DNA

- Explain and perform PCR amplification and use this technique to detect the presence of DNA “targets”, DNA cloning (subcloning) and DNA sequencing
- Understand and explain how to isolate, quantitate and manipulate RNA
- Design and perform experiments to reverse transcribe RNA into complementary DNA (cDNA) and assess gene expression by semi- and quantitative PCR
- Isolate total RNA and be able to purify mRNA from this material
- Introduce and express foreign DNA and/or RNA in mammalian cells using the techniques of electroporation, lipid-based transfection, calcium phosphate based transfection and retroviral transduction
- “Knockdown” an expressed gene in mammalian cells using RNA silencing
- Prepare laboratory notebooks that include the objective, results and methods of each laboratory experiment. Additionally, students will provide conclusions to each experiment, including when appropriate, potential explanations to unexpected results

MMBIO 151 : Introduction to Microbiology. (4:3:3)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Chem 105 or concurrent enrollment.

DESCRIPTION: Principles of prokaryotic biology emphasizing cell structure, function, and metabolism. Introduction to bacterial genetics, microbial diversity, and microbial ecology.

Course Outcomes

- Understand what microbes are, what they are composed of, how they are built, and their phylogenetic relationships to the living world. Be able to distinguish between eukaryotes, prokaryotes, and viruses.*Relates to Program Learning Outcome: "Exhibit mastery of four of the following six principal areas of the discipline" five of which are microbial physiology, microbial genetics, microbial ecology, medical microbiology, and virology
- Become familiar with the tools of microbiology through both lecture and labs and demonstrate basic aseptic technique. Develop proficiency in working with bacteria including streaking for isolation and performing growth experiments.*Relates to Program Learning Outcome: "Exhibit mastery of four of the following six principal areas of the discipline" three of which are microbial physiology, microbial genetics, microbial ecology
- Formulate questions, testable hypotheses and implement appropriate experimental protocol. Collect and analyze data and be able to draw appropriate conclusions.*Relates to Program Learning Outcome: “Devise experiments with appropriate hypotheses and controls.”
- Integrate knowledge to make informed judgments on tests, lab reports, lab presentations and lab write-ups*Relates to Program Learning Outcome: "Communicate scientific information using both oral and written methods"
- Obtain a deeper appreciation for the complexity, diversity and purposes of life.*Relates to Program Learning Outcome: "Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological principles"

MMBIO 261 : Infection and Immunity. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Principles of infectious organisms (principally bacteria and viruses), the diseases they cause, and the role of host immune responses in health and disease.

Course Outcomes

There are no course outcomes available

MMBIO 360 : Microbial Genetics. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBIO 240

DESCRIPTION: How DNA governs complex bacterial functions. Classical and modern approaches to gene discovery, including genetic screens, gene mapping, targeted genetic manipulations, and analyzing gene activity.

Course Outcomes

There are no course outcomes available

MMBIO 364 : Bacterial Pathogenesis. (4:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: MMBIO 261

DESCRIPTION: Fundamental principles of bacterial pathogenesis, emphasizing the molecular interactions of medically important bacteria and their hosts.

Course Outcomes

There are no course outcomes available

MMBIO 430 : Advanced Cell Biology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 360; Bioscience major status.

DESCRIPTION: Molecular genetics, cell biology, and developmental biology.

Course Outcomes

- Read primary literature to further their own understanding of the topic*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Explain the processes of cell biology*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Apply knowledge of these molecular processes to broader topics*Relates to Program Learning Outcome: Proficiency in formulating and carrying out independent and collaborative research projects.
- Analyze research data, design experiments and present data in a clear manner*Relates to Program Learning Outcome: Communication skills in presenting their research findings through effective oral and written presentations.

MMBIO 463 : Immunology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & MMBIO 261

DESCRIPTION: Advanced concepts of immunological processes.

Course Outcomes

- Understanding advanced concepts of Immunology by studying and reflecting on the subject.*Relates to Program Learning Outcome: Exhibit mastery of four of the principle areas of the discipline
- Understands experimental designs used in immunology research and determine the soundness of the immunological data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Read and understand current publications in Immunology and be able to discuss and critically evaluate experiments and data*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Engage in discussions about concepts in immunology and research. Present a PowerPoint on a particular immunological topic. Engage in a question and answer session on the content. Write an easy on a chosen subject relating to recent immunological advances.*Relates to Program Learning Outcome: Communicate scientific information using both oral and written methods.
- Develop a deep appreciation for our Heavenly Father and his love for each of us by engaging in studying how he designed the immune system to protect his children from disease.*Relates to Program Learning Outcome: Reflect/ discuss/ explore how faith in the Lord, and Christ like living are affected by an understanding of the fundamental biological processes.

MMBIO 465 : Virology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBio 261 or equivalent.

DESCRIPTION: Basic principles of virology, emphasizing selected molecular aspects of virus life cycles and disease processes.

Course Outcomes

- Be able to answer basic questions about Virology: Why are viruses organized as they are? How do viruses replicate? How do viruses cause disease? What are the interactions between viruses and the host immune system? How to prevent/treat/cure viral infections? How can viruses be used as tools to study biological processes and for gene transfer? How can an understanding of viruses help you in your future career? *Relates to Program Learning Outcome: “Exhibit mastery of four of the principal areas of the discipline”, one of which is Virology.
- Understand experimental tools used to study viruses (these are broadly applicable to molecular biology, cell biology, and microbiology) and be able to develop experiments and interpret data.*Relates to Program Learning Outcomes: “Devise experiments with appropriate hypotheses and controls” and “Interpret experiments from primary scientific literature”
- Write about a current, pressing issue in the field of Virology.*Relates to Program Learning Outcome: “Communicate scientific information”
- Understand how research of viruses “by study and also by faith” can lead to alleviation of human disease and suffering.*Relates to Program Learning Outcome: “Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological processes”

MMBIO 466 : Virology Laboratory. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: MMBio 261; or MMBio 465 or concurrent enrollment.

DESCRIPTION: Laboratory exercises illustrating in vitro behavior of selected viruses. Developing laboratory skills for virus studies.

Course Outcomes

- Be able to gain hands-on experience in the ability to characterize various aspects of viral infections based upon cultured eukaryotic cells.
- Be able to titrate virus stocks.
- Be able to determine if a human has been previously exposed to a specific virus by perform serological tests.

MMBIO 467 : Immunology Lab. (1:0:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBio 261; or 463 or concurrent enrollment.

DESCRIPTION: Laboratory exercises in advanced concepts of immunological processes.

Course Outcomes

- Maintain a research lab book with experimental protocol, data, and discussion of results.
- Understand advanced laboratory concepts of Immunology by completing protocols and experiments
- Understand experimental design used in immunology research and determine the soundness of immunological data according to the design and controls used in the experiment.
- Obtain and interpret experimental data.
- Expand the student's understanding of immunology research and acknowledge the miracle of immunological processes. Develop good social skills through participation in laboratory experiments with other students.

MMBIO 494R : Mentored Research. (.5-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

DESCRIPTION: Mentored research.

Course Outcomes

- Perform current techniques and carry out experiments in a professional manner. Gather data and evaluate results.
- Properly notate work and results in a scientific notebook. Participate in the preparation of scientific papers and presentations.
- Develop, design and troubleshoot experimental procedures.
- Form relationships with a research mentor and other students in the lab. Begin networking and professional activities.
- Read, and use primary literature to design experiements and advance a project. Present and evaluate

articles from the primary literature

(*strongly* recommended)

MMBIO 510 : History of Microbiology and Molecular Biology. (2:2:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: Any one 400-level MMBio course.

DESCRIPTION: Exploring the lives and historical settings of major contributors to the development of the sciences of microbiology and molecular biology emphasizing the importance of their ground-breaking discoveries in both basic and applied science.

Course Outcomes
- The objective of this course is to examine the lives and accomplishments of a few of our science ancestors creating a clearer perspective of our place in the constellation of our science.

MMBIO 513 : Philosophy of Biology. (2:2:0)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: MMBio 360 or 363 or 461 or equivalent.

DESCRIPTION: Epistemological, metaphysical, and ethical issues in the biological sciences. Philosophical questions concerning the theory of evolution, debate between evolution and creationism, fitness, adaptationism, the units of selection, systematics, sociobiology, and evolutionary ethics.

Course Outcomes
- Students will read and analyze historically relevant scientific primary literature
- Students will explain philisophical concepts underyling biology
- Students will use philisophical principles to discuss and evaluate ethical issues in biology

MMBIO 515 : RNA-Mediated Gene Regulation. (2:2:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: MMBio 441 or equivalent.

DESCRIPTION: Current advances in studies on RNA processing, including RNA splicing and editing, riboswitches, ribozymes, and the role of small RNAs in RNA interference and regulation of gene expression.

Course Outcomes
- Understand the current approaches and advances in RNA-mediated gene regulation research.
- Read and comprehend reports in the current scientific literature regarding RNA-mediated gene regulation.
- Develop skills in making effective scientific presentations using high standards of clarity, relevance, and logic.

MMBIO 518 : Select Pathogens. (2:2:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: MMBio 221 or equivalent.

DESCRIPTION: Current literature in special pathogens.

Course Outcomes
- Understand the procedures, practices, and facilities required for biosafety levels 1-4.
- Understand the basic parameters of bioterrorism and the current threats
- Understand the current CDC classification of select agents.
- Understand the basic biological characteristics of each select agent, their virulence mechanisms, and their interaction with various hosts.
- Understand how select agents have been used and could be used as bioweapons.
- _____
  (Individual – Please write your own in the space above)

PDBIO 482 : Developmental Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PDBIO 360

RECOMMENDED: PDBio 325.

DESCRIPTION: Invertebrate and vertebrate developmental biology. Embryonic gastrulation, neurulation, pattering, etc. Modern approaches and research strategies. Emphasizes gene function, cell signaling, signal transduction during embryogenesis.

Course Outcomes
- Students will be able to generally describe the early development (from fertilization to axis formation) of one invertebrate and one vertebrate model organism.
- Students will be able to generally describe the concepts of cellular competence, induction, specification, commitment and differentiation in embryonic development.
- Students will be able to give two examples of organogenesis, including genes and signal transduction pathways that lead to organ system formation.
- Students will be able to explain embryonic patterning, using examples that include genes known to act in patterning events.
- Students will be able to explain at least two concepts in developmental biology that overlap with other sciences, such as stem cell research, cancer research, evolutionary sciences, or neuroscience.
- Students will be able to discern and summarize the current state of knowledge on a given topic, construct pioneering research questions on that topic, and propose experiments aimed at answering those questions.

PDBIO 582 : Developmental Genetics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PDBio 482 or equivalent.

DESCRIPTION: Gene function and regulation during cell specification and differentiation, pattern formation, and organogenesis in developing embryo.

Course Outcomes

- Students will demonstrate understanding of, and the ability to think critically about, primary developmental biology research articles.
- Students will demonstrate confidence in contributing to scientific discussions.
- Students will demonstrate the ability to think scientifically by formulating a research proposal.

Note: Be aware of prerequisites for the above courses (usually filled in a coupled major).

Undergraduate Courses

100-Level Courses

MMBIO 102 : Introduction to Clinical Laboratory Techniques. (1:0:3)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Hospital laboratory techniques.

Course Outcomes

- Describe and carry out basic clnical laboratory techniques
- List and evaluate careers in clinical laboratory sciences

MMBIO 151 : Introduction to Microbiology. (4:3:3)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Chem 105 or concurrent enrollment.

DESCRIPTION: Principles of prokaryotic biology emphasizing cell structure, function, and metabolism. Introduction to bacterial genetics, microbial diversity, and microbial ecology.

Course Outcomes

- Understand what microbes are, what they are composed of, how they are built, and their phylogenetic relationships to the living world. Be able to distinguish between eukaryotes, prokaryotes, and viruses.*Relates to Program Learning Outcome: "Exhibit mastery of four of the following six principal areas of the discipline" five of which are microbial physiology, microbial genetics, microbial ecology, medical microbiology, and virology
- Become familiar with the tools of microbiology through both lecture and labs and demonstrate basic aseptic technique. Develop proficiency in working with bacteria including streaking for isolation and performing growth experiments.*Relates to Program Learning Outcome: "Exhibit mastery of four of the following six principal areas of the discipline" three of which are microbial physiology, microbial genetics, microbial ecology
- Formulate questions, testable hypotheses and implement appropriate experimental protocol. Collect and analyze data and be able to draw appropriate conclusions.*Relates to Program Learning Outcome: “Devise experiments with appropriate hypotheses and controls.”
- Integrate knowledge to make informed judgments on tests, lab reports, lab presentations and lab write-ups*Relates to Program Learning Outcome: "Communicate scientific information using both oral and written methods"
- Obtain a deeper appreciation for the complexity, diversity and purposes of life.*Relates to Program Learning Outcome: "Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological principles"

MMBIO 194A : Freshman Research Initiative 1. (2:0:6)

WHEN TAUGHT: Fall

PREREQUISITE: By application only.

DESCRIPTION: Phage isolation and characterization.

NOTE: For freshmen or sophomore students only. Requires two semester commitment.

Course Outcomes

- Use proper aseptic techniques for the transfer and handling of microorganisms and instruments.
- Use appropriate microbiological media and test systems.
- Use standard microbiology laboratory equipment correctly.
- Follow an experimental protocol, collect and organize data in a systematic fashion, present data in anappropriate form, assess the validity of the data, and draw appropriate conclusions based on the results.

MMBIO 194B : Freshman Research Initiative 2. (2:0:6)

WHEN TAUGHT: Winter

PREREQUISITE: MMBIO 194A

DESCRIPTION: Phage genome annotation. Focus on experimental design and data analysis.

NOTE: For freshmen or sophomore students only. Requires two semester commitment.

Course Outcomes

- Prepare DNA for sequencing
- Archive phage samples and DNA samples (submit archived phage to HHMI)
- Learn how to use bioinformatics software for the following:DNA sequence alignment (Consed)Primer design (Primer3)Assessing ORFs for gene calls (GBrowse, Glimmer and GeneMark)Homology assessment (BLAST and Phamerator)Annotation (Apollo)Comparative analysis (positional and functional)
- Analyze, annotate and prepare to submit genome to GenBank (submit if possible)

Prepare an abstract for a presentation of research data
- Prepare and deliver a research presentation (oral and poster)
- Gain experience in research writing and reading of scientific papers

200-Level Courses

MMBIO 221 : General Microbiology. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Any biology course.
RECOMMENDED: Any chemistry course.
DESCRIPTION: Microbial world, emphasizing communicable diseases, their causes and control.
NOTE: Recommended for students seeking a liberal education in microbiology who do not have the prerequisites to take the more advanced courses.

Course Outcomes
- Explain and discuss the ways by which microbiologists study microorganisms.
- Discuss the principle infectious diseases that affect mankind, including how they are transmitted, treated, controlled and prevented.
- Differentiate between the types of microorganisms by identifying relevant structure and their function in the biosphere.
- Propose microbial solutions to global problems.
- Describe how the human body defends itself against infectious agents.

MMBIO 222 : General Microbiology Laboratory. (1:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: MMBio 221 or concurrent enrollment.

Course Outcomes
- Use the bright field microscope to view and interpret microbiological specimens
- Use proper aseptic techniques int he handling and transfer of microbiological specimens
- Use standard microbiological media to culture and identify common microbiological specimens
- Use standard microbiology laboratory equipment correctly
- Follow an experimental protocol, collect and organize data, present data in an appropriate form, assess the validity of the data, and draw appropriate comclusions based on the results
- Integrate information and skills gained int eh course to make informed judgements about the role of microorganisms in everyday life
- Use accepted safety protocols when handling microbiological specimens and chemicals

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.
DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes
- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

MMBIO 241 : Molecular and Cellular Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBio 240 or concurrent enrollment.
DESCRIPTION: Molecular and cellular biology techniques laboratory.

Course Outcomes
- Practice ethics and integrity by working with groups and following lab rules.*Relates to Program Learning Outcome: A commitment to professional integrity and ethical behavior consistent with themission of the university.
- Learn the basics of experimental design, how to formulate a hypothesis, what controls to use, how to interpret experimental data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Practice scientific communication through written lab questions, exams and oral presentations.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Learn molecular biology laboratory techniques through practical laboratory exercises. Techniques include, spectrophotometry,isolation of DNA and protein, quantification of DNA and protein, techniques used to purify or detect specific proteins, such aschromatography, western blot and ELISA, DNA fingerprinting, polymerase chain reaction and enzyme assays.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology.

MMBIO 261 : Infection and Immunity. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Principles of infectious organisms (principally bacteria and viruses), the diseases they cause, and the role of host immune responses in health and disease.

Course Outcomes

There are no course outcomes available

300-Level Courses

MMBIO 360 : Microbial Genetics. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBIO 240

DESCRIPTION: How DNA governs complex bacterial functions. Classical and modern approaches to gene discovery, including genetic screens, gene mapping, targeted genetic manipulations, and analyzing gene activity.

Course Outcomes
There are no course outcomes available

MMBIO 362R : Careers in Biomedical Sciences. (1:ARR:ARR)

WHEN TAUGHT: Fall

DESCRIPTION: Lectures and field trips surveying career choices.

Course Outcomes
- Students should be able to make informed decisions about career paths in Microbiology

MMBIO 363 : Microbial Ecology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 130; or MMBIO 151; or PDBIO 120

DESCRIPTION: Natural history of a microbe; its distribution and abundance. Critical influence of scale and perspective in determining underlying mechanisms.

Course Outcomes
There are no course outcomes available

MMBIO 364 : Bacterial Pathogenesis. (4:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: MMBIO 261

DESCRIPTION: Fundamental principles of bacterial pathogenesis, emphasizing the molecular interactions of medically important bacteria and their hosts.

Course Outcomes
There are no course outcomes available

MMBIO 390R : Readings in Molecular Biology. (1:1:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240

RECOMMENDED: PDBio 360.

DESCRIPTION: Selected readings in molecular biology.

Course Outcomes
- Become familiar with the current literature and techniques in molecular biology
- Gain experience in critically evaluating the current literature in molecular biology.
- Gain confidence in scientific presentations and discussions.

MMBIO 392 : Hematology. (2.5:2.5:1)

PREREQUISITE: Medical laboratory science program acceptance.

DESCRIPTION: Normal and abnormal hematology.

Course Outcomes
- Perform the full range of clinical laboratory tests in areas such as hematology and play a role in the development and evaluation of test systems and interpretive algorithms*Relates to Program Learning Outcome: #1
- Have diverse responsibilities in areas of analysis and clinical decision-making, regulatory compliance with applicable regulations, education, and quality assurance/performance improvement wherever laboratory testing is researched, developed, or performed*Relates to Program Learning Outcome: #2
- Possess basic knowledge, skills, and relevant experiences for the following:Communications to enable consultative interactions with members of the healthcare team, external relations, customer service, and patient educationFinancial, operations, marketing, and human resource management of the clinical laboratory to enable cost-effective, high-quality, value-added laboratory servicesInformation management to enable effective, timely, accurate, and cost-effective reporting of laboratory-generated information *Relates to Program Learning Outcome: #3, 4, 5

MMBIO 393 : Immunohematology and Coagulation Theory. (2.5:2.5:1)

PREREQUISITE: Medical laboratory science program acceptance.

DESCRIPTION: Theory and practice of bloodbanking and coagulation theory.

Course Outcomes
- Perform the full range of clinical laboratory tests in areas such as coagulation and immunohematology and play a role in the development and evaluation of test systems and interpretive algorithms*Relates to Program Learning Outcome: #1
- Have diverse responsibilities in areas of analysis and clinical decision-making, regulatory compliance with

applicable regulations, education, and quality assurance/performance improvement wherever laboratory testing is researched, developed, or performed*Relates to Program Learning Outcome: #2
- Possess basic knowledge, skills, and relevant experiences for the following:Communications to enable consultative interactions with members of the healthcare team, external relations, customer service, and patient educationFinancial, operations, marketing, and human resource management of the clinical laboratory to enable cost-effective, high-quality, value-added laboratory servicesInformation management to enable effective, timely, accurate, and cost-effective reporting of laboratory-generated information*Relates to Program Learning Outcome: #3, 4, 5

MMBIO 394 : Practical Hematology. (2:0:7)

PREREQUISITE: MMBio 392 or concurrent enrollment.

DESCRIPTION: Laboratory to accompany MMBio 392; medical laboratory techniques in hematology.

Course Outcomes
- Discuss the techniques of drawing, proper collection, and storage of blood samples for hematology procedures. *Relates to Program Learning Outcome: #1
- Practice safe techniques according to those presented in class and in the textbook throughout your career in student and clinical laboratory experiences. *Relates to Program Learning Outcome: #2
- Demonstrate your ability to properly use the various types of spectrophotometers in the laboratory.*Relates to Program Learning Outcome: #2
- Prepare the reagents required in the procedures throughout the semester where possible.*Relates to Program Learning Outcome: #2
- Select proper reagents, perform procedures, interpret results, and evaluate the significance of the results for all determinations listed on the course outline*Relates to Program Learning Outcome: #2

MMBIO 395 : Practical Immunohematology and Coagulation Theory. (2:0:7)

PREREQUISITE: MMBio 393 or concurrent enrollment.

DESCRIPTION: Laboratory to accompany MMBio 393; medical laboratory techniques in immunohematology and coagulation theory.

Course Outcomes
- Perform the full range of clinical laboratory tests in areas such as coagulation and blood banking and play a role in the development and evaluation of test systems and interpretive algorithms*Relates to Program Learning Outcome: #1
- Have diverse responsibilities in areas of analysis and clinical decision-making, regulatory compliance with applicable regulations, education, and quality assurance/performance improvement wherever laboratory testing is researched, developed, or performed*Relates to Program Learning Outcome: #2
- Possess basic knowledge, skills, and relevant experiences for the following:Communications to enable consultative interactions with members of the healthcare team, external relations, customer service, and patient educationFinancial, operations, marketing, and human resource management of the clinical laboratory to enable cost-effective, high-quality, value-added laboratory servicesInformation management to enable effective, timely, accurate, and cost-effective reporting of laboratory-generated information*Relates to Program Learning Outcome: #3, 4, 5

MMBIO 399R : Academic Internship. (1-9:0:40)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

DESCRIPTION: Approved experiential learning.

Course Outcomes
- Students will be able to design and perform experiements using the latest techniques.
- Students will analyze experimental results and draw conclusions.
- Students will communicate with supervisors and collegues in an outside the university environment. They will present their scientific research.

400-Level Courses

MMBIO 407 : Clinical Microbiology. (4:2:6)

WHEN TAUGHT: Winter

PREREQUISITE: MMBIO 261; Admission to the Medical Laboratory Science program.

DESCRIPTION: Approaches to laboratory diagnosis of infectious diseases.

Course Outcomes
- Gain familiarity with the medically important bacteria and fungi by performing the full range of clinical laboratory tests in Microbiology (Prepare, examine and interpret gram stained smears of microorganisms, streak appropriate media for isolation of microorganisms, interpret stains, growth patterns, and biochemical reactions to aid in the identification of microbial organisms) and play a role in the development and evaluation of test systems and interpretive algorithms
- Have diverse responsibilities in areas of analysis and clinical decision-making, regulatory compliance with applicable regulations, education, and quality assurance/performance. Demonstrate improvement wherever laboratory testing is researched, developed, or performed. Be able to design experiments, with appropriate controls, to test various hypotheses in clinical Microbiology.
- Possess basic knowledge, skills, and relevant experiences for the following:Communications to enable consultative interactions with members of the healthcare team, external relations, customer service, and patient educationFinancial, operations, marketing, and human resource management of the clinical laboratory to enable cost-effective, high-quality, value-added laboratory servicesInformation management to enable effective, timely, accurate, and cost-effective reporting of laboratory-generated information
- Possess basic knowledge, skills, and relevant experiences for the following:Communications to enable consultative interactions with members of the healthcare team, external relations, customer service, and patient educationFinancial, operations, marketing, and human resource management of the clinical laboratory to enable cost-effective, high-quality, value-added laboratory servicesInformation management to enable effective, timely, accurate, and cost-effective reporting of laboratory-generated information
- Possess basic knowledge, skills, and relevant experiences for the following:Communications to enable consultative interactions with members of the healthcare team, external relations, customer service, and patient educationFinancial, operations, marketing, and human resource management of the clinical laboratory to enable cost-effective, high-quality, value-added laboratory servicesInformation management to enable effective, timely, accurate, and cost-effective reporting of laboratory-generated information

MMBIO 417 : Medical Parasitology. (3:2:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Bio 100 or equivalent.

DESCRIPTION: Pathogenesis, diagnosis, and epidemiology of human parasitic diseases. Laboratory included.

Course Outcomes

- Gain familiarity with the medically important parasites. This includes understanding parasite host range as well as pathology and mechanisms of pathogenesis.*Relates to Program Learning Outcome: Exhibit mastery of medical microbiology
- Be able to design experiments, with appropriate controls, to test various hypotheses in parasitology.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Read and critically interpret current scientific literature in the field of parasitology.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Students should gain an understanding of their role and responsibility in alleviating suffering caused by parasitic diseases.*Relates to Program Learning Outcome: Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological principles.

MMBIO 422 : Pathophysiology and Laboratory Diagnosis in Clinical Chemistry. (2.5:2:1)

PREREQUISITE: Medical laboratory science program acceptance.

DESCRIPTION: Laboratory diagnosis of disorders involving the major systems of the human body.

Course Outcomes

- Perform analytical tests of body fluids, cells, and other substances
- Confirm abnormal results, verify quality control procedures, execute quality control procedures, and develop solutions to problems concerning the generation of laboratory data
- Make decisions conscerning the results of quality control and quality assurance measures, and institute proper pocedures to maintain accuracy and precision.

MMBIO 423 : Pathophysiology and Lab Diagnosis in Clinical Chemistry and Molecular Diagnostics. (2.5:2:1)

PREREQUISITE: Medical laboratory science program acceptance.

DESCRIPTION: Laboratory diagnosis of disorders involving the major systems of the human body and molecular diagnostic applications.

Course Outcomes

- Perform the full range of clinical laboratory tests in areas such as clinical chemistry, urinalysis and molecular dioagnostics and play a role in the development and evaluation of test systems and interpretive algorithms
- Have diverse responsibilities in areas of analysis and clinical decision-making, regulatory compliance with applicable regulations, education, and quality assurance/performance improvement wherever laboratory testing is researched, developed, or performed.
- Possess basic knowledge, skills, and relevant experiences for the followingCommunications to enable consultative interactions with members of the healthcare team, external relations, customer service, and patient educationFinancial, operations, marketing, and human dresource management of the clinical laboratory to enable cost-effective, hight-quality, value-added laboratorys ervicesInformation management to enable effective, timely, accurate, and cost-effective reporting of laboratory-generated informaation

MMBIO 424 : Diagnostic Techniques in Clinical Chemistry. (2:0:7)

PREREQUISITE: Clinical laboratory science program acceptance.

DESCRIPTION: Medical laboratory techniques in clinical chemistry.

Course Outcomes

- Perform the full range of clinical laboratory tests in clinical chemistryDiscuss the techniques of drawing, proper collection, and storage of blood samples for clinical chemistry proceduresPractice safe techniques according to those presented in class and in the textbook throughout your career in student and clinical laboratory experiences.Demonstrate your ability to properly use the various types of spectrophotometers in the laboratoryPrepare the reagents required in the procedures throughout the semester where possiblePerform proper procedures, discuss the purpose of reagents, interpret results, evaluate quality assurance factors and solve problems or discrepancies for the assays and tasks performed.
- Have diverse responsibilities in areas of analysis and clinical decision-making, regulatory compliance with applicable regulation, education, and quality assurance performance improvement whenever laboratory testing is researched, developed, or performed.

MMBIO 425 : Diagnostic Techniques in Clinical Chemistry and Molecular Biology. (2:0:7)

PREREQUISITE: Medical laboratory science program acceptance.

DESCRIPTION: Medical laboratory techniques in clinical chemistry and diagnostic molecular genetics.

Course Outcomes

- Perform the full range of clinical laboratory tests in clinical chemistryDiscuss the techniques of drawing, proper collection, and storatge of blood samples for clinical chemistry proceduresPractice safe techniques according to those presented in class and in the textbook throughout your career in studen and clinical laboratory experiences.Demonstrate your ability to properly use the various types of spectrophotometers in the laboratoryPrepare the reagents required in the procedures throughout the semester where possiblePerform proper procedures, discuss the purpose of reagents, interpret results, evaluate quality assurance factors and solve problems or discrepancies for the assays and tasks performed.
- Have diverse responsibilities in areas of analysis and clinical decision-making, regulatory compliance with applicable regulation, education, and quality assurance performance improvement whenever laboratory testing is researched, developed, or performed.

MMBIO 430 : Advanced Cell Biology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 360; Bioscience major status.

DESCRIPTION: Molecular genetics, cell biology, and developmental biology.

Course Outcomes

- Read primary literature to further their own understanding of the topic*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Explain the processes of cell biology*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Apply knowledge of these molecular processes to broader topics*Relates to Program Learning Outcome: Proficiency in formulating and carrying out independent and collaborative research projects.
- Analyze research data, design experiments and present data in a clear manner*Relates to Program Learning Outcome: Communication skills in presenting their research findings through effective oral and written presentations.

MMBIO 441 : Advanced Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & CHEM 352

DESCRIPTION: Molecular biology of gene structure and expression in prokaryotic and eukaryotic organisms.

Course Outcomes

- Learn molecular biology principles through study, lecture, and class discussion. An emphasis will be on understanding the experiments used to learn these principles.â ¨ *Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology preparing students for further education and/or employment.
- Apply the principles learned to design experiments and properly interpret experimental data.â ¨ *Relates to Program Learning Outcome: Proficiency in formulating research projects
- Present current research from the scientific literature.*Relates to Program Learning Outcomes: Communicate scientific information using oral methods; interpret, analyze and critique experiments from the primary scientific literature. Presenting research findings through effective oral and written presentations.
- Demonstrate integrity and ethical behavior during all class work.â ¨ *Relates to Program Learning Outcome: Commitment to professional integrity and ethical behavior consistent with the mission of the University.

MMBIO 442 : Advanced Molecular Biology Laboratory. (2:0:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 241; MMBio 441 or concurrent enrollment.

DESCRIPTION: Laboratory to accompany MMBio 441.

Course Outcomes

- Learn molecular biology laboratory techniques through hands-on experience. Techniques will include DNA and RNA isolation, PCR, microRNA isolation, northern blotting, RFLP analysis, site-directed mutagenisis, protein extraction and EMSA.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology
- Apply the techniques to design experiments with appropriate hypotheses and controls and properly interpret experimental data*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls
- Practice scientific communication and record-keeping through the completion of a laboratory notebook and answering written and oral questions and presentations.*Relates to Program Learning Outcome: Demonstrate Communication skills in presenting research findings through effective oral and written presentations.
- Design and carry out independent experiments*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls

MMBIO 461 : Advanced Bacterial Physiology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481 & MMBIO 151

DESCRIPTION: Principles of prokaryotic physiology, including cell structure and function, gene regulation, and biochemical processes; focusing on the unique aspects of prokaryotic biology.

Course Outcomes

- Students will demonstrate an advanced understanding of selected topics in microbial physiology (cell structure, growth, biosynthesis, transport, etc.) through their participation in classroom discussions, writing assignments and oral presentations.
- Students will demonstrate the ability to read, comprehend and communicate current research in microbial physiology by making Powerpoint presentations to the class.
- Students will write a scientific review article on a topic of their choice related to microbial physiology.

MMBIO 463 : Immunology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & MMBIO 261

DESCRIPTION: Advanced concepts of immunological processes.

Course Outcomes

- Understanding advanced concepts of Immunology by studying and reflecting on the subject.*Relates to Program Learning Outcome: Exhibit mastery of four of the principle areas of the discipline
- Understands experimental designs used in immunology research and determine the soundness of the immunological data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Read and understand current publications in Immunology and be able to discuss and critically evaluate experiments and data*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Engage in discussions about concepts in immunology and research. Present a PowerPoint on a particular immunological topic. Engage in a question and answer session on the content. Write an easy on a chosen subject relating to recent immunological advances.*Relates to Program Learning Outcome: Communicate scientific information using both oral and written methods.
- Develop a deep appreciation for our Heavenly Father and his love for each of us by engaging in studying how he designed the immune system to protect his children from disease.*Relates to Program Learning Outcome:

Reflect/ discuss/ explore how faith in the Lord, and Christ like living are affected by an understanding of the fundamental biological processes.

MMBIO 465 : Virology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBio 261 or equivalent.

DESCRIPTION: Basic principles of virology, emphasizing selected molecular aspects of virus life cycles and disease processes.

Course Outcomes

- Be able to answer basic questions about Virology: Why are viruses organized as they are? How do viruses replicate? How do viruses cause disease? What are the interactions between viruses and the host immune system? How to prevent/treat/cure viral infections? How can viruses be used as tools to study biological processes and for gene transfer? How can an understanding of viruses help you in your future career? *Relates to Program Learning Outcome: "Exhibit mastery of four of the principal areas of the discipline", one of which is Virology.
- Understand experimental tools used to study viruses (these are broadly applicable to molecular biology, cell biology, and microbiology) and be able to develop experiments and interpret data.*Relates to Program Learning Outcomes: "Devise experiments with appropriate hypotheses and controls" and "Interpret experiments from primary scientific literature"
- Write about a current, pressing issue in the field of Virology.*Relates to Program Learning Outcome: "Communicate scientific information"
- Understand how research of viruses "by study and also by faith" can lead to alleviation of human disease and suffering.*Relates to Program Learning Outcome: "Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological processes"

MMBIO 466 : Virology Laboratory. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: MMBio 261; or MMBio 465 or concurrent enrollment.

DESCRIPTION: Laboratory exercises illustrating in vitro behavior of selected viruses. Developing laboratory skills for virus studies.

Course Outcomes

- Be able to gain hands-on experience in the ability to characterize various aspects of viral infections based upon cultured eukaryotic cells.
- Be able to titrate virus stocks.
- Be able to determine if a human has been previously exposed to a specific virus by perform serological tests.

MMBIO 467 : Immunology Lab. (1:0:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBio 261; or 463 or concurrent enrollment.

DESCRIPTION: Laboratory exercises in advanced concepts of immunological processes.

Course Outcomes

- Maintain a research lab book with experimental protocol, data, and discussion of results.
- Understand advanced laboratory concepts of Immunology by completing protocols and experiments
- Understand experimental design used in immunology research and determine the soundness of immunological data according to the design and controls used in the experiment.
- Obtain and interpret experimental data.
- Expand the student's understanding of immunology research and acknowledge the miracle of immunological processes. Develop good social skills through participation in laboratory experiments with other students.

MMBIO 468 : (MMBio-Bio-PWS) Genomics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PWS 340

DESCRIPTION: Current analysis of genes and genomes; computational and statistical approaches for analyzing genomic data, including genome sequencing and annotation, gene expression and the transcriptome, proteomics and functional genomics, and genetic variation and SNPs.

Course Outcomes

- Students can describe the technology and process used to sequence genomes (de novo and re-sequencing)
- Students can complete a series of exercises with data representing genomic experiments (analyze and interpret)
- Students can outline techniques and concepts for assessing genomic parameters such as methylation, gene expression, DNA-binding motifs, metagenomics, and comparative genomics.

MMBIO 470R : Synthetic Biology. (1-2:Arr:Arr)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; Application and interview.

DESCRIPTION: Students are introduced to concepts of synthetic biology and then conceptualize, design, build, and characterize a genetically engineered machine. The class culminates in presentations at the IBE Western regional and IGEM regional conferences in October.

Course Outcomes

There are no course outcomes available

MMBIO 490R : Molecular Biology Seminar. (1:1:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 441; Senior status.

DESCRIPTION: Critical examination of current literature and research in molecular biology.

Course Outcomes

- Describe the current research in the field of molecular biology
- Network and talk to prominent researchers in the field
- Analyze current research and experimental design.

MMBIO 491 : Concept Applications in Laboratory Medicine. (1:1:0)

WHEN TAUGHT: Fall

PREREQUISITE: Acceptance into medical laboratory science program.

DESCRIPTION: Case presentations of various medical disorders.

Course Outcomes

- This course is designed to allow the student to interpret, evaluate, and correlate laboratory data and clinical symptoms pertaining to specific disease states. Each week several students will present case study presentations covering current lecture content. For example, week two covers carbohydrate metabolism and related disease processes so the assigned students will present patient data focusing on a specific disease such as diabetes mellitus, including symptoms, laboratory findings and treatment.
- To receive a passing grade for this course, it is expected that the student will attend all weekly sessions ON TIME with no more than one excused absence permitted and present at least one case study during the semester. Class will be held on each Friday of the semester at 9 a.m.

MMBIO 494R : Mentored Research. (.5-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

DESCRIPTION: Mentored research.

Course Outcomes

- Perform current techniques and carry out experiments in a professional manner. Gather data and evaluate results.
- Properly notate work and results in a scientific notebook. Participate in the preparation of scientific papers and presentations.
- Develop, design and troubleshoot experimental procedures.
- Form relationships with a research mentor and other students in the lab. Begin networking and professional activities.
- Read, and use primary literature to design experiements and advance a project. Present and evaluate articles from the primary literature

MMBIO 496R : Clinical Experience. (1-9:0:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 392 & MMBIO 422

DESCRIPTION: Performing the full range of clinical laboratory tests in an affiliated clinical facility. A six-month internship experience.

Course Outcomes

- Have a clinical eperience outside of the University. Be familiar with procedures, protocols, and working environment in a working clinical laboratory.

MMBIO 499R : Senior Honors Thesis. (1-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Topic to be cleared with Honors Program and Department of Microbiology and Molecular Biology.

Course Outcomes

- Students will design and carry out experiments to research the topic of their honors thesis
- Students will prepare a well-written thesis that communicates their research findings.

500-Level Graduate Courses (available to advanced undergraduates)

MMBIO 510 : History of Microbiology and Molecular Biology. (2:2:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: Any one 400-level MMBio course.

DESCRIPTION: Exploring the lives and historical settings of major contributors to the development of the sciences of microbiology and molecular biology emphasizing the importance of their ground-breaking discoveries in both basic and applied science.

Course Outcomes

- The objective of this course is to examine the lives and accomplishments of a few of our science ancestors creating a clearer perspective of our place in the constellation of our science.

MMBIO 513 : Philosophy of Biology. (2:2:0)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: MMBio 360 or 363 or 461 or equivalent.

DESCRIPTION: Epistemological, metaphysical, and ethical issues in the biological sciences. Philosophical questions concerning the theory of evolution, debate between evolution and creationism, fitness, adaptationism, the units of selection, systematics, sociobiology, and evolutionary ethics.

Course Outcomes

- Students will read and analyze historically relevant scientific primary literature
- Students will explain philisophical concepts underyling biology
- Students will use philisophical principles to discuss and evaluate ethical issues in biology

MMBIO 515 : RNA-Mediated Gene Regulation. (2:2:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: MMBio 441 or equivalent.

DESCRIPTION: Current advances in studies on RNA processing, including RNA splicing and editing, riboswitches, ribozymes, and the role of small RNAs in RNA interference and regulation of gene expression.

Course Outcomes

- Understand the current approaches and advances in RNA-mediated gene regulation research.
- Read and comprehend reports in the current scientific literature regarding RNA-mediated gene regulation.
- Develop skills in making effective scientific presentations using high standards of clarity, relevance, and logic.

MMBIO 518 : Select Pathogens. (2:2:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: MMBio 221 or equivalent.

DESCRIPTION: Current literature in special pathogens.

Course Outcomes

- Understand the procedures, practices, and facilities required for biosafety levels 1-4.
- Understand the basic parameters of bioterrorism and the current threats
- Understand the current CDC classification of select agents.
- Understand the basic biological characteristics of each select agent, their virulence mechanisms, and their interaction with various hosts.
- Understand how select agents have been used and could be used as bioweapons.
- _____
  (Individual – Please write your own in the space above)

MMBIO 528R : Current Topics in Pathogenesis. (1:1:0)

WHEN TAUGHT: Fall Even Yrs.; Winter

PREREQUISITE: MMBio 151, 221, 261 or equivalent.

RECOMMENDED: MMBio 364.

DESCRIPTION: Readings from current literature on pathogenesis; student presentations and discussion.

Course Outcomes

No outcomes are available at this time.

MMBIO 551R : Current Topics in Microbiology and Molecular Biology. (1-3:Arr.:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Readings from current literature on a specific topic; student presentations and discussion.

Course Outcomes

- Students will be able to read, interpret, understand and evaluate current primary literature
- Students will describe in depth current topics in molecular or microbiology
- Students will present finding from the primary literature in a scientific manner, and evaluate the presentations of others.

MMBIO 557 : Genes and Cancer. (2:2:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: MMBio 441 or equivalent.

DESCRIPTION: Molecular basis of human cancers, emphasizing oncogenes, tumor suppressor genes, chromosomal instability, hereditary cancers, chemical and physical carcinogens, and viral carcinogenesis.

Course Outcomes

There are no course outcomes available

MMBIO 565 : Molecular Virology. (2:2:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: MMBio 465 or equivalent.

DESCRIPTION: Molecular mechanisms of virus architecture, attachment and entry pathways, replication strategies, oncogenesis, evolution, and mechanisms of pathogenesis.

Course Outcomes

- Describe why viruses are organized and classified as they are.
- Describe viral replication on a molecular level for multiple virus types
- Explain how viruses cause disease, and the interactions between viruses and the host immune system.
- Describe how can viruses can be used as tools to study biological processes and for gene transfer. Use molecular tools to study viruses

Graduate Courses

For 600- and 700-level courses, see the BYU 2013–2014 Graduate Catalog.

The neuroscience undergraduate program is an interdisciplinary program that allows students to seek advisement at the College of Life Sciences Academic Advisement Office or the College of Family, Home, and Social Sciences Advisement Center.

Admission to Degree Program

The degree program in the Neuroscience Center is a open enrollment program.

The Discipline

Neuroscience is the field of study covering the development and function of the central nervous system and its connection to influencing/regulating behavior. The study of neuroscience examines topics such as neuroanatomy, neuropsychopharmacology, neurophysiology, molecular neurobiology, and neuroendocrinology. The interdisciplinary nature of neuroscience requires the tools provided by experience and training in calculus, general biology, genetics, physiology, molecular biology, chemistry (general, organic, and biochemistry), physics, psychology (hormones and behavior, memory, cognition, sensation, and perception), and research design and analysis.

The objectives for students pursuing a major in neuroscience are to (1) establish and promote an interdisciplinary education in neuroscience, (2) produce scientifically literate individuals having the ability to design, conduct, and analyze research activities, and (3) have students think critically in an integrative fashion based upon research-rich and inquiry-based academic curricula.

Career Opportunities

Neuroscience prepares students to pursue advanced degrees in graduate school or to enter into the pharmaceutical and biotechnology workforce. Neuroscience is an excellent preprofessional field of study for those interested in health professions, law, or business.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

Undergraduate Programs and Degrees

BS in Neuroscience (Program Outcomes)

Students should see their college advisement center for help or information concerning the undergraduate programs.

Program Requirements | View MAP | View Program Outcomes

1. Complete the following major core courses:

NEURO 205 : Neurobiology. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: PDBIO 120; or instructor's consent.
DESCRIPTION: The nervous system; cellular communication, neural basis of behavior, and hormonal influences.

Course Outcomes
There are no course outcomes available

NEURO 360 : Neuroanatomy. (2:2:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: NEURO 205; Neuroscience major status.
DESCRIPTION: Functonal anatomy of the human brain and spinal cord, including surface and cross-sectional gross anatomy, microscopic anatomy, and sensory, motor, and integrative systems' circuitry.

Course Outcomes
There are no course outcomes available

NEURO 380 : Behavioral Neuroscience. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: NEURO 205; Neuroscience major status.
DESCRIPTION: Critical examination of anatomical, physiological, and chemical bases of behavioral expression.

Course Outcomes
There are no course outcomes available

NEURO 480 : Advanced Neuroscience. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: NEURO 205; or PDBIO 362; PDBio 360; Neuroscience or PDBio major status.
DESCRIPTION: Principles of neural science. Structure-function relationships and integration of the nervous system.

Course Outcomes
There are no course outcomes available

NEURO 481 : Neuroscience Laboratory. (1:0:3)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: NEURO 205; Neuro 480 or concurrent enrollment; Neuroscience major status.
DESCRIPTION: Exposure to classical/modern experiments in neuroscience.

Course Outcomes
There are no course outcomes available

2. Complete the following life sciences courses:

MMBIO 240 : Molecular Biology. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.
DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes

There are no course outcomes available

PDBIO 360 : Cell Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Fundamentals of cell structure and function with reference to analytical methods used by cell biologists. Practice in designing, executing, and interpreting relative experiments.

Course Outcomes

- Students will demonstrate knowledge of the molecular architecture of the nucleus, including the nuclear envelope, nucleoplasm and nucleolus, chromatin, and the nuclear pore.
- Students will demonstrate an understanding of protein transport, including nuclear import and export and vesicular transport through the secretory and sorting pathways.
- Students will demonstrate knowledge of the molecular and cellular structure and dynamics of cytoskeletal systems.
- Students will be able to apply the basic cell biological principles in outcomes 1-3 to more complicated cellular processes, including cell adhesion, cell migration, cell polarity, cell division, cancer, and development.
- Students will demonstrate the ability to generate hypothesis about how cell biological systems work at the molecular level and design experiments that test that hypothesis.
- Students will demonstrate competence in interpreting original raw data from cell biology experiments, including microscopy, protein biochemistry, molecular biology, and genetics strategies
- Students will demonstrate the ability to critically evaluate primary cell biology literature, including the ability to evaluate the design and interpretation of experimental data.

PDBIO 362 : Advanced Physiology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220

DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.

NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes

- Students will manifest an understanding of how structures at the molecular level lead to properties associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes

- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

3. Complete the following chemistry courses:

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.
DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.
NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes
- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: CHEM 105; or CHEM 111
DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.
NOTE: Three lectures and one recitation section per week.

Course Outcomes
- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.
DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.
NOTE: Required for most students needing one year of general chemistry.

Course Outcomes
- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 351 : Organic Chemistry. (3:3:1)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: CHEM 105; or CHEM 111
DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.
NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes
- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: CHEM 351; or CHEM 351M
DESCRIPTION: Continuation of Chem 351.

Course Outcomes

- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes

- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

4. Complete one of the following physics course options:

Either

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: High school algebra and trigonometry.

RECOMMENDED: Concurrent enrollment in Phscs 107.

DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes

There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 105 or equivalent.

RECOMMENDED: Concurrent enrollment in Phscs 108.

DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes

There are no course outcomes available

PHSCS 107 : General Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 105 or concurrent enrollment.

DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

Course Outcomes

- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 106 or concurrent enrollment

DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

Course Outcomes

- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

Or

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Calculus or concurrent enrollment.

DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

Course Outcomes

- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

PHSCS 123 : Introduction to Waves, Optics, and Thermodynamics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 121 or equivalent. Calculus.

DESCRIPTION: Waves, thermal physics, optics, special relativity, and introduction to modern physics. Weekly lab.

Course Outcomes

- Solve problems and answer conceptual questions using the basics of fluid statics and dynamics, including Bernoulli's principle and Pascal's law.
- Answer conceptual questions and calculate changes in temperature, pressure, entropy and volume for quasistatic ideal gas processes and be able to determine work done and efficiency for gas engines, heat pumps, and refrigerators. Determine heat flow and temperatures in systems in steady state.
- Solve problems and answer conceptual questions involving waves, using concepts such as wave speed, wavelength, frequency, superposition, beats, and resonance. Solve wave interference problems.
- Find the location and magnification of images in single- and multiple-lens/mirror systems by calculation and by ray tracing, and be able to work general problems in optics using Snell's law and specular reflection.
- (Section 1) Solve problems and answer conceptual questions in basic modern physics including special relativity, and quantum mechanics and nuclear physics.
- (Section 2) Solve more advanced problems and answer conceptual questions in wave analysis, including calculating group and phases velocities, solving for Fourier coefficients of periodic functions, and frequencies of notes in the equal temperament musical scale. Solve problems in special relativity.

PHSCS 220 : Introduction to Electricity and Magnetism. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 113; Phscs 121 or equivalent.

DESCRIPTION: Electricity and magnetism. Weekly lab.

Course Outcomes

There are no course outcomes available

5. Complete the following:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

Note: Students may substitute Math 113 for Math 112.

6. Complete three courses from three different departments from the following electives:

BIO 370 : Bioethics. (2:1:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Introductory biology course.

DESCRIPTION: In-depth lecture and small group discussion of varied bioethical issues. LDS Church positions emphasized when appropriate.

Course Outcomes

- Students will understand the ethical and philosophical underpinnings of bioethics and to develop ethical intuitions on bioethical issues.
- Students will learn the terminology, vocabulary, and objectives of bioethics.
- Students will understand the tools and approaches needed to make a bioethical decision and to communicate that decision in rationally informed ways.
- Students will understand the bioethical primary literature, to understand how to read case studies, and familiarity with the major issues being discussed in bioethics today.

CHEM 482 : Mechanisms of Molecular Biology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Second-semester biochemistry. Nucleic acid biochemistry and molecular biology: nucleotide metabolism, chromosome and chromatin structure, DNA structure and replication, RNA transcription and gene expression, protein synthesis and regulation, eukaryotic gene systems, signal transduction.

Course Outcomes

- Draw the structure of DNA, determine the topology of a plasmid, explain the chemical sequence of events that occur during DNA replication and draw structural changes that occur due to mutation.
- Determine how to perform and interpret an electrophoresis separation of DNA fragments, southern blot, restriction map, polymerase chain reaction, and a DNA sequencing reaction with necessary controls.
- Design a DNA cloning strategy, explain controls necessary, and write procedural plan.
- Draw and explain the mechanism of RNA transcription and how RNA is processed, spliced, and regulated. Understand the basic mechanisms of transcriptional regulation using the example of transcription of genes necessary for cholesterol synthesis.
- Determine when and how to use techniques that involve RNA: Northern blots, quantitative PCR, microarrays, S1 nuclease and primer extension mapping of the transcriptional start with appropriate controls.
- Determine the sequence of amino acids in a protein from a series of nucleotides.
- Draw and explain the process of protein translation and how it is regulated.
- Determine where a protein is localized in a tissue or cell: interpret a western blot, protein fusion assays.
- Determine with what a protein interacts: Interpret gel shift assays, Chromatin Immunoprecipitation, DNA footprinting, and yeast two hybrid reporter assays.
- Maintain faith through challenges and ethical boundaries in reporting and interpreting data.

COMD 334 : Hearing Science and Acoustics. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Hearing anatomy, physiology, and science.

Course Outcomes

- Demonstrate an understanding of the decibel and be able to convert among various reference systems.
- Demonstrate an understanding of basic acoustic concepts.
- Explain details of the anatomy and physiology of the auditory pathway.

**NEURO 449R : Undergraduate Research Experience. (.5-3:0:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Undergraduate research experience in neuroscience.

Course Outcomes

There are no course outcomes available

PDBIO 363 : Advanced Physiology Laboratory. (1:.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 362 or concurrent enrollment; or instructor's consent.

DESCRIPTION: Experiments and exercises in advanced physiology emphasizing human physiology. Computer simulations of muscle function, endocrine disease, and human physiology. Emphasizes problem solving and calculations.

Course Outcomes

- Students will demonstrate the skills required to properly interpret data from scientific experimentation to discover how physiological systems function.
- Students will manifest an understanding of basic physiological principles by modeling how human cells, organs, and organ systems function.
- Students will describe how interactions between human organ systems work to maintain homeostasis.

PDBIO 561 : Physiology of Drug Mechanisms. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 362

DESCRIPTION: Overview of physiological and pharmacological mechanisms and principles of human therapeutics as applied to clinically significant pathophysiology.

Course Outcomes

- Students will manifest an interactive understanding of drug mechanisms at the molecular, cellular, tissue, organ, and/or systemic levels.
- Students will demonstrate that they understand the cellular pathways targeted for pharmacological treatment.
- Pupils will demonstrate a comprehension of how the body interacts with compounds used for pharmacological treatments.
- Students will manifest the knowledge, skills and vocabulary necessary to converse with health care providers concerning their own and family's medical treatments.

**PDBIO 565 : Endocrinology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PDBio 362 or instructor's consent.

DESCRIPTION: Mammalian hormones.

Course Outcomes

- Students will be able to describe major actions of each hormone on target cells.
- Students will be able to describe pathways for synthesis, post-translational processing, and cellular localization or secretion for peptide hormones and hormone receptors.
- Students will be able to describe pathways for synthesis and inactivation for steroid hormones, thyroid hormones, and catecholamines.
- Students will be able to describe the control of synthesis and secretion for each hormone, including feedback relationships.
- Students will be able to describe major signaling pathways in target cells for each hormone.
- Students will be able to describe methodologies used to test hypotheses in study of problems in endocrinology.
- Students will be able to describe and recognize etiology and clinical symptoms of the major endocrine diseases

**PDBIO 568 : Cellular Electrophysiology and Biophysics. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 362 & PHSCS 140; or PDBIO 362 & PHSCS 220

DESCRIPTION: Using electrophysiology and biophysics as an approach to study of physiology. Extensive look at ion channels and cell signaling.

Course Outcomes

- Students will demonstrate biophysical knowledge gained in specific areas including membrane properties, voltage and ligand-gated receptors, neurotransmission and mathematical modeling.
- Students will apply the biophysical knowledge gained in a laboratory setting.
- Students will demonstrate critical thinking and evaluation skills gained in the course by preparing a competent and clearly written research proposal.
- Students will demonstrate knowledge of a particular research topic and presentation skills in a clear and informative oral presentation.

***PSYCH 370 : Sensation and Perception. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PSYCH 307 & PSYCH 309 & PSYCH 310; or NEURO 205; or instructor's consent.

DESCRIPTION: Sensory basis of perception and principles of perceptual organization.

NOTE: Contains content featured in the Graduate Record Examination (GRE).

Course Outcomes

- Students will gain an understanding of how our brains interact with our external environment and give rise to our perceptions.Measurement: Students will demonstrate this understanding on quizzes and on exams.
- Students will develop an understanding of how we know what we know about sensation and perception, i.e., research methods in cognitive neuroscience and the scientific method.Measurement: Students will demonstrate this understanding through in-class discussion, on quizzes/exams, and through coming to class ready to learn. Being ready to learn includes completing the assigned readings and assessments, participating in lecture and discussion, and completing outside assignments (e.g., labs).
- Students will be able to apply the principles discussed in class to the world around them.Measurement:

Students will demonstrate this through lab assignments.
- Students will be able to critically reflect on the content of psychology as well as on disciplinary values in light of their knowledge of and commitment to the restored gospel of Jesus Christ and to sustain personal values that are true to the gospel while maintaining their serious study of psychology and neuroscience.Measurement:Multiple choice exams, quizzes.

PSYCH 375 : Cognition. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: PSYCH 307 & PSYCH 309 & PSYCH 310; or NEURO 205; or instructor's consent.

DESCRIPTION: Perceptual organization; information processing; cognitive development; relationships between sensory analysis, perception, memory, learning, language, and problem solving.

NOTE: Contains content featured in the Graduate Record Examination (GRE).

Course Outcomes
- Students will recognize and understand the cognitive processes of perception, memory, language, reasoning, and problem solving.Measurement: This will be assessed on multiple choice and essay quizzes and exams.
- Students will assess and develop ways to apply the principles of cognitive psychology.Measurement: This will be assessed with a design proposal that implements the principles of cognitive psychology.

PSYCH 382 : Stress Psychobiology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PSYCH 307 & PSYCH 309 & PSYCH 310; or NEURO 205; or instructor's consent. (Neuro 205 will substitute for Psych 310.)

DESCRIPTION: Behavioral neurobiology of stress.

NOTE: Contains content featured in the Graduate Record Examination (GRE).

Course Outcomes
- Students will describe how stress affects physiology and physical health outcomes.Measurement:Multiple choice exams, quizzes.
- Students will integrate their knowledge of stress and health by analyzing a health condition in the context of stress.Measurement:APA style paper.
- Students will experiment with stress management techniques and assess their effectiveness using a stress management journal.Measurement:Journal entries, critique of experience.

**PSYCH 584 : Cognition, Affect, and Brain Function. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PSYCH 381; or NEURO 380; or equivalent; or instructor's consent.

DESCRIPTION: Basic principles of cognition and affect as they relate to normal brain function and following neural disease or injury.

NOTE: Contains content featured in the Graduate Record Examination (GRE).

Course Outcomes
- Students will extend their understanding of specific brain systems and the cognitive and emotional functions correlated with those systems.Measurement: Participation in class conversation about the required reading; in-class presentations on brain function or disorders; final examination.
- Students will compare and contrast scientific approaches to the study of brain, cognition, and emotion; and describe specific structural and functional research methods.Measurement:Participation in class conversation about the required reading; in-class presentations and writing assignments.
- Students will describe how brain injury can produce cognitive or emotional disorders or both and how the study of brain injury illustrates issues in the evaluation of research findings.Measurement:Author journal article critiques, final exam, and in-class presentations.

Note: Students should carefully consult with the Neuroscience Center and faculty regarding which electives they should take to best support their postgraduate plans.

**These courses require the instructor's signature before enrolling.

***This course is strongly recommended.

Recommended Courses

In addition to the above courses, students may find the following courses helpful (see Preprofessional Advisement Center, 3326 WSC):

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 352 or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.

NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes
- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying

products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

PDBIO 220 : Human Anatomy (with lab). (3:2:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Structure and function of the human body. Lab included.

Course Outcomes
- Students will demonstrate an understanding of the basic microscopic underpinnings of tissue structures and be able to name them.
- Students will demonstrate a greater understanding and appreciation for the human body, it's overall design and connections to other living organisms, and what a marvelous creation it is.
- Students will be able to list the name, location, and function of each of the body's organs and organ systems.

STDEV 170 : Introduction to Health Professions. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Overview of health professions: medical, dental, and other specialties. Primary focus on guest lectures from various practitioners and clinicians.

Course Outcomes
- 1. Students will gain a basic understanding of a significant number of health professions.
- 2. Students will increase knowledge of health professions through class presentations with health care professionals.
- 3. Students will learn more about health care provision through service learning in preparation for service-oriented health professions.
- 4. Students will increase awareness of the requirements to enter various health professions and where to find additional information about their preferred health care field.

STDEV 271 : Preview of Dentistry. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Preview of dentistry with lectures by dentists; overview of required courses; application process; recommended extracurricular opportunities.

Course Outcomes
- Increase understanding of the dental profession.
- Understand the application process for dental school and analyze their individual preparation for this process.

STDEV 272 : Preview of Medicine. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Preview of medical practice with lectures by doctors; overview of required courses; application process; recommended extracurricular opportunities.

Course Outcomes
- Understand the application process for medical school and analyze their individual preparation for this process.
- Increase understanding of the medical profession.

STDEV 273 : Preview of Optometry. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Preview of optometry with lectures by optometrists; overview of required courses; application process; recommended extracurricular opportunities.

Course Outcomes
- Students will increase understanding of the optometry profession.
- Students will understand the application process for optometry school and analyze their individual preparation for this process.

STDEV 375 : Dental School Preparation Laboratory Experience. (2:0:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Dental laboratory practices; tooth terminology, morphology, and anatomy. Procedures including oral pathology, diagnosis, and X-rays.

Course Outcomes
- Students will gain a basic understanding of dental sciences in preparation for their first semesters of dental school.
- Students will learn basic dental terminology and current issues in dentistry to better prepare them for the dental school interviewing process.
- Students will develop manual dexterity for skills that are required to perform dentistry.

STDEV 399R : Health Professions Internship. (1-3:Arr:Arr)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Internships with health care providers.

Course Outcomes

- Students will gain valuable experience by shadowing and working with current health professionals.
- Students will improve their ability to converse with health care professionals.
- Students will learn about different healthcare practices.
- Students will develop meaningful professional relationships with their internship providers.

STDEV 470 : Medical and Dental School Application. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Preparation for medical and dental school applications; entire application process, including school identification and submission.

Course Outcomes

- Increase understanding of the medical/dental school application process. They will understand the various components of the application process and how to access resources to facilitate their professional school application.
- Assess their individual preparation for the professional school application process.
- Improve writing skills, particularly in respect to the personal statement.
- Improve interviewing skills.

*Hours include courses that may fulfill university core requirements.

Undergraduate Courses

200-Level Courses

NEURO 205 : Neurobiology. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: PDBIO 120; or instructor's consent.
DESCRIPTION: The nervous system; cellular communication, neural basis of behavior, and hormonal influences.

Course Outcomes
There are no course outcomes available

300-Level Courses

NEURO 316 : Neuroscience Advanced Writing. (3:3:0)
WHEN TAUGHT: Contact Department.
PREREQUISITE: NEURO 205; Engl 150 or equivalent; Neuroscience major status.
DESCRIPTION: Processes of research writing and oral presentation for neuroscience students.
NOTE: Fulfills GE Advanced Written and Oral Communication requirement.

Course Outcomes
There are no course outcomes available

NEURO 360 : Neuroanatomy. (2:2:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: NEURO 205; Neuroscience major status.
DESCRIPTION: Functonal anatomy of the human brain and spinal cord, including surface and cross-sectional gross anatomy, microscopic anatomy, and sensory, motor, and integrative systems' circuitry.

Course Outcomes
There are no course outcomes available

NEURO 380 : Behavioral Neuroscience. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: NEURO 205; Neuroscience major status.
DESCRIPTION: Critical examination of anatomical, physiological, and chemical bases of behavioral expression.

Course Outcomes
There are no course outcomes available

400-Level Courses

NEURO 449R : Undergraduate Research Experience. (.5-3:0:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Undergraduate research experience in neuroscience.

Course Outcomes
There are no course outcomes available

NEURO 480 : Advanced Neuroscience. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: NEURO 205; or PDBIO 362; PDBio 360; Neuroscience or PDBio major status.
DESCRIPTION: Principles of neural science. Structure-function relationships and integration of the nervous system.

Course Outcomes
There are no course outcomes available

NEURO 481 : Neuroscience Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: NEURO 205; Neuro 480 or concurrent enrollment; Neuroscience major status.
DESCRIPTION: Exposure to classical/modern experiments in neuroscience.

Course Outcomes
There are no course outcomes available

NEURO 496R : Neuroscience Academic Internship. (.5-12:0:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Major status.
DESCRIPTION: Off-campus internship experience in neuroscience.

Course Outcomes
There are no course outcomes available

Admission to Degree Program

Some degree programs in the Department of Nutrition, Dietetics, and Food Science carry special enrollment limitations. Please see the department for specific details.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

Undergraduate Programs and Degrees

BS in Dietetics (Program Outcomes)
BS in Food Science (Program Outcomes)
BS in Nutritional Science (Program Outcomes)

Minor in Nutrition

Students should see Life Sciences Student Services for help or information concerning the undergraduate programs.

Note: For the molecular biology program, see Microbiology and Molecular Biology.

Show All Course Descriptions
Hide All Course Descriptions

This is a limited-enrollment program requiring departmental admissions approval. Please see below for information regarding requirements for admission to this major.

Following prerequisite courses, the Didactic Program in Dietetics (DPD) consists primarily of dietetics course work at the junior and senior level. Brigham Young University's Didactic Program in Dietetics is accredited by the Accreditation Council for Education in Nutrition and Dietetics of the Academy of Nutrition and Dietetics, 120 South Riverside Plaza, Suite 2000, Chicago, IL 60606-6995, (312) 899-0040 ext. 5400. http://www.eatright.org/ACEND. Following graduation, students must gain acceptance into and complete a dietetic internship (DI) to qualify for the national examination required for Registered Dietitian (RD) status.

Program Acceptance Requirements

1. Students must apply by February 15 for admission into the professional sequence in the fall. Formal acceptance is required to continue with the professional sequence.
2. Enrollment is limited to 40 students.
3. Four of the following eight courses must be completed at the time of application: Acc 200, Chem 285, MMBio 221, NDFS 100, 200, 290; PDBio 220, 305.
4. Major GPA and performance in nutrition, dietetics, and food science courses will be considered. Successful applicants typically have a major and cumulative GPA greater than 3.0 and nutrition, dietetics, and food science course grades greater than B–.
5. Applicants need at least 300 hours of dietetics-related work and/or volunteer experience.

Program Requirements | View MAP | View Program Outcomes

1. Complete the following courses (to be completed before professional sequence):

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.

DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

Course Outcomes

- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.
- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

**CHEM 101 : Introductory General Chemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 97 or equivalent.

DESCRIPTION: Atomic and molecular structure, periodic relationships, states of matter, chemical reactions and stoichiometry, acids and bases.

NOTE: Primarily for nonscience majors who require a broad introduction to general chemistry.

Course Outcomes

- Students will be able to view the world around them in chemical terms. Students will use the concepts of atoms, molecules, and their properties to understand a variety of phenomena.
- Students will be able to make qualitative and/or quantitative predictions regarding a number of chemical concepts including chemical reactions and stoichiometry, calorimetry, osmosis, gases, acid/base chemistry, chemical equilibria, and radioactivity.

***CHEM 285 : Introductory Bio-organic Chemistry. (4:4:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

DESCRIPTION: Principles of organic chemistry and biochemistry relating to biomolecule structure and function.

Course Outcomes

- Students will understand the metabolism of carbohydrates, lipids, and proteins in humans. They will be able to describe in structures and words the metabolism of sugars through the pathways of glycolysis, the citric acid cycle, and the electron transport chain.
- Students will understand the structure and reactivity of organic functional groups, such as alcohols, aldehydes, carboxylic acids, and amides. For example, students will learn that aldehydes and ketones typically undergo addition reactions.
- Students will understand the structure and reactivity of the biomolecules that have those functional groups. For example, students will be able to demonstrate that carbohydrates are aldehydes and ketones that undergo addition reactions to form hemiacetals and polysaccharides with acetal linkages.

MMBIO 221 : General Microbiology. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Any biology course.

RECOMMENDED: Any chemistry course.

DESCRIPTION: Microbial world, emphasizing communicable diseases, their causes and control.

NOTE: Recommended for students seeking a liberal education in microbiology who do not have the prerequisites to take the more advanced courses.

Course Outcomes

- Explain and discuss the ways by which microbiologists study microorganisms.
- Discuss the principle infectious diseases that affect mankind, including how they are transmitted, treated, controlled and prevented.
- Differentiate between the types of microorganisms by identifying relevant structure and their function in the biosphere.
- Propose microbial solutions to global problems.
- Describe how the human body defends itself against infectious agents.

****MMBIO 222 : General Microbiology Laboratory. (1:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBio 221 or concurrent enrollment.

Course Outcomes

- Use the bright field microscope to view and interpret microbiological specimens
- Use proper aseptic techniques int he handling and transfer of microbiological specimens
- Use standard microbiological media to culture and identify common microbiological specimens
- Use standard microbiology laboratory equipment correctly
- Follow an experimental protocol, collect and organize data, present data in an appropriate form, assess the validity of the data, and draw appropriate comclusions based on the results
- Integrate information and skills gained int eh course to make informed judgements about the role of microorganisms in everyday life
- Use accepted safety protocols when handling microbiological specimens and chemicals

NDFS 100 : Essentials of Human Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Food-oriented study of nutritional facts and principles as a basis for dietary choices; consequences of choices; scientifically examining controversial topics.

Course Outcomes

- Apply the scientific method to identify and interpret credible nutrition information.
- Identify, interpret, and apply nutrition information.
- Identify functions of nutrients and their major food sources.

NDFS 200 : Nutrient Metabolism. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: NDFS 100; Organic chemistry or concurrent enrollment.

DESCRIPTION: Chemical structures of nutrients, their food sources, requirements, digestion, absorption, transport, metabolism, functions, storage and excretion; metabolic consequences of nutrient deficiencies, interactions, imbalances, and toxicities.

Course Outcomes

- Identify chemical structures of amino acids, lipids, carbohydrates, and vitamins.
- List functions, food sources, and consequences of deficiencies and toxicities for each of the essential nutrients.
- Explain the metabolic and physiological basis for the consequences of dietary practices that affect nutrient levels, and relate the consequences to the roles of essential nutrients in metabolic processes.
- Analyze diets and alter food intake to reach predetermined targets for consumption of specific dietary components or to achieve an overall dietary pattern.
- Find answers to questions and summarize results from original research reported in published peer-reviewed scientific journals.

NDFS 250 : Essentials of Food Science. (3:3:0)

WHEN Fall; Winter; Spring

TAUGHT:
PREREQUISITE: CHEM 101; or CHEM 105; or SFL 110; concurrent enrollment in NDFS 251
DESCRIPTION: Overview of food science, including chemical, physical and microbiological principles related to food processing, storage, and utilization. Current issues in food science.
NOTE: This class should be taken concurrently with NDFS 251.

Course Outcomes
- Explain the basic concepts and principles of Food Science
- Recognize (distinguish) current topics in the news and in lay literature as being related to Food Science and Technology
- Evaluate the scientific validity of various consumer concerns regarding food production, distribution, preservation, storage and utilization
- Obtain further information on Food Science topics through library research of the scientific literature
- Explain how Food Science knowledge applies to your major field of study, and make the connection between what you're learning and what you plan to do after graduation
- Solve Food Science related problems.
- Determine if you more fully enjoy eating, understanding what happens to food between farm gate and dinner plate

NDFS 251 : Essentials of Food Science Laboratory. (1:0:3)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: CHEM 101; or CHEM 105; or SFL 110; Concurrent enrollment in NDFS 250.
DESCRIPTION: Laboratory experience in the chemistry of changes occurring during food processing, storage, and utilization.
NOTE: This class should be taken concurrently with NDFS 250.

Course Outcomes
- Understand the basic chemistry involved in ripening, processing, and storing food*Relates to Program Learning Outcome: Demonstrate an understanding of the chemical changes occurring during food processing and storage, including reactions involving carbohydrates, protein and fats
- Develop the ability to work in teams to carry out laboratory experiments
- Understand key elements of food required for proper preservation and safety*Relates to Program Learning Outcome: Demonstrate an understanding of the role of microorganisms in food processing, food preservation, and food safety with respect to pathogens, spoilage, and fermentative microorganisms, and apply the basic elements of sanitation and quality assurance programs to understand and control microbial effects in food

NDFS 290 : Introduction to Dietetics. (1:1:0)
WHEN TAUGHT: Fall
DESCRIPTION: The profession of dietetics; exposure to specialty areas through guest lectures.

Course Outcomes
- Understand how to become a Registered Dietitian Nutritionist, including:Educational requirements and various routes to completion.Requirements for acceptance to the Didactic Program in Dietetics at BYU.Requirements for acceptance to a Dietetic Internship.Requirements for eligibility for Registration by the Commission on Dietetic Registration (CDR)Requirements for maintenance of continuing CDR Registration.
- Understand what a Registered Dietitian Nutritionist is.
- Understand what it means to be a professional.
- Have exposure to a variety of jobs currently held by Registered Dietitian Nutritionists.
- Identify which area of dietetics is personally most appealing
- Identify what future job opportunities are predicted in the profession of dietetics.

PDBIO 220 : Human Anatomy (with lab). (3:2:2)
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Structure and function of the human body. Lab included.

Course Outcomes
- Students will demonstrate an understanding of the basic microscopic underpinnings of tissue structures and be able to name them.
- Students will demonstrate a greater understanding and appreciation for the human body, it's overall design and connections to other living organisms, and what a marvelous creation it is.
- Students will be able to list the name, location, and function of each of the body's organs and organ systems.

PDBIO 305 : Human Physiology (with lab). (4:4:2)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Chem 101 or equivalent.
RECOMMENDED: A general biology course.
DESCRIPTION: Function of body organ systems.
NOTE: Not acceptable for physiology and developmental biology, biophysics, or neuroscience majors. Designed for students with basic chemistry / no molecular biology. Students with chemistry/molecular biology should take PDBio 362.

Course Outcomes
- Students will demonstrate the proper use of physiology terminology.
- Student will demonstrate a well-integrated and comprehensive understanding of the human body in health and disease.
- Students will use knowledge of cells and organ systems to solve problems related to the function of the human body.
- Students will demonstrate the necessary knowledge and skills in physiology that are required for their majors and future aspirations for graduate and professional school.

- Students will develop and demonstrate in their daily lives a deeper appreciation and respect for the human body.
- Students will demonstrate the knowledge to make informed personal (medical,ethical,and political)decisions regarding physiological concepts.

PSYCH 111 : Introduction to Psychological Science. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Basic course in modern scientific psychology.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

- Objective: Apply psychological principles to personal and social issues and problems.Measurement:Examinations, quizzes, comprehensive final examination that includes questions common to all Psychology 111 sections, response papers to essays written by practicing research psychologists or term paper.
- Objective: Demonstrate a broad knowledge of the basic theoretical perspectives that guide psychological inquiry.Measurement: Examinations, quizzes, comprehensive final examination that includes questions common to all Pyychology 111 sections.
- Objective: Understand the basic research methods used in psychology, including classical and current experiments.Measurement: Examinations, quizzes, comprehensive final examination that includes questions common to all Psychology 111 sections, response papers to essays written by practicing research psychologists or term paper, participation as a subject in actual psychological research.

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: MATH 110 or equivalent.
DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

****Note:** Or an equivalent general chemistry course from high school or junior college.
*****Note:** Chem 105, 106, 107, 351, 352, 481 sequence is recommended for students interested in medical or dental school or graduate programs in nutrition.
******Note:** Chem 107 may be subsituted for MMBio 222.

2. Complete the following professional sequence courses (after being admitted into the program):

NDFS 300 : Medical Nutrition Therapy 1. (4:4:0)

WHEN TAUGHT: Fall
PREREQUISITE: Dietetics major status.
DESCRIPTION: Nutritional assessment and medical nutrition therapy across disease states.

Course Outcomes

- Develop educational materials for patient teaching and use current nutrition knowledge related to general healthy eating, health promotion, or medical nutrition therapy counseling
- Be familiar with basic counseling and interviewing techniques
- Be familiar with basic counseling and interviewing techniques
- Determine fluid and electrolyte requirements
- Understand and use medical terminology
- Know biochemical markers related to nutrition and how to interpret them
- Gather, analyze and interpret the nutrient composition of foods/menus
- Develop appropriate disease specific diets
- Be familiar with common alternative nutritional therapies and become familiar with resources on herbal remedies
- Understand the dietary supplement act
- Demonstrate counseling techniques to facilitate behavior change
- Assessment and treatment of nutritional health risks
- Identify the appropriate medical nutrition therapy for specific disease states and provide the appropriate intervention, including calculating and defining diets
- Interpret, evaluate and use professional literature to make ethical evidence-based practice decisions
- Use the nutrition care process to make decisions, to identify nutrition-related problems and determine and evaluate nutrition interventions, including MNT, disease prevention and health promotion
- Modify and evaluate menus for diverse groups
- Demonstrate understanding of pharmacology, nutrient metabolism, physiology, genetics and biochemistry

NDFS 356 : Medical Nutrition Therapy 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 300

DESCRIPTION: Medical nutrition therapy across disease states; continuation of NDFS 300.

Course Outcomes

- Use oral and written communications in presenting an educational session for a group
- Use current information technologies
- Work effectively as a team member
- Public Speaking
- Media Presentations
- Knowledge of: exercise physiology, pathophysiology related to nutrition care, fluid and electrolyte requirements, pharmacology: nutrient-nutrient interaction.
- Demsonstrated ability to: interpret medical terminology, interpret laboratory parameters related to nutrition
- Document appropriately a variety of activities
- Calculate and interpret nutrient composition of foods
- Knowledge of medical nutrition therapy strategies to assess need for adaptive feeding techniques and equipment
- Calculate and/or define diets for health conditions addressed by health promotion/disease (cancer, pulmonary, liver, pancreas, and kidney)
- Calculate enteral and parenteral nutrition formulations
- Evolving methods of assessing health status
- Assessment and treatment of nutritional health risks
- Identify the appropriate medical nutrition therapy for specific disease states and provide the appropriate intervention, including calculating and defining diets
- Interpret, evaluate and use professional literature to make ethical evidence-based practice decisions
- Use current information technologies to locate and apply evidence based guidelines and protocols; (ADA evidence Analysis Library and the Cochrane Database of Systematic Reviews)
- Use the nutrition care process to make decisions, to identify nutrition-related problems and determine and evaluate nutrition interventions, including MNT, disease prevention and health promotion
- Modify and evaluate menus for diverse groups
- Demonstrate understanding of pharmacology, nutrient metabolism, physiology, genetics and biochemistry

NDFS 374 : Food Production Management. (2:2:0)

WHEN TAUGHT: Fall

PREREQUISITE: Dietetics major status.

DESCRIPTION: Managing processes and techniques of quantity food production in commercial and institutional food systems.

Course Outcomes

- 1. Explain the foodservice industry in the context of a system and describe food consumption issues and trends for various consumers.
- 2. Be able to identify different paths of food product flow and understand the advantages and disadvantages of these operations.
- 3. Demonstrate knowledge of principles of menu planning through creating an appropriate menu for institutional feeding to meet needs of target population.
- 4. Understand the importance of aesthetically pleasing therapeutic menus and apply knowledge to meet individual or group dietary needs.
- 5. Discuss need for standardized recipes and appropriately quantify recipes for volume food production.
- 6. Be able to identify quantity food production techniques, terminology, and equipment used for: soups, sauces, meat, poultry, fish, egg and dairy foods, vegetables, fruits, salads, sandwiches, and baked goods
- 7. Be able to appropriately use basic principles of food and labor costs for financial accountability
- 8. Accurately quantify recipes and calculate recipe costs.
- 9. Students are able to use current information technologies to demonstrate an effective and professional oral presentation for the class
- 10. Students are able to apply the principles of sanitation and safety to foodservice, and recognize the impact on consumers

NDFS 375 : Food Production Management Laboratory. (2:0:8)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 374 or concurrent enrollment.

Course Outcomes

- 2. Use appropriate controls in quantity food production.
- 1. Apply appropriate quantity food preparation techniques and Food Science knowledge for soups, sauces, meat, poultry, fish, dairy foods, vegetables, fruits, salads, sandwiches, and baked goods
- 3. Demonstrate use of appropriate safety and sanitation principles during food production and service to the customer.
- 4. Demonstrate safe and appropriate use of and cleaning of foodservice equipment.
- 5. Demonstrate effective presentation and service of food.
- 6. Students will work effectively as a team member as evidenced through good communication, appropriate assertiveness, and effective time management skills.
- 7. Use various monitoring tools to provide data for continuous quality improvement.
- 8. Demonstrate production management skills ensuring that foodservice operation meets the needs of the clients.

NDFS 400 : Community Nutrition. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: NDFS 200; or NDFS 201

DESCRIPTION: Public health nutrition applied to community programs.

Course Outcomes

- 1. Describe various community nutrition programs, health care delivery systems, and policies aimed to enhance the nutritional status and overall health of individuals in the US population.
- 2. Effectively write a grant proposal that encompasses the basic elements of implementing community nutrition programs, including a needs assessment, program planning, implementation and evaluation, and budget preparation, and conduct the proposed project in a real-life community setting.
- 3. Exhibit competent communication skills in both written and oral communication for lay and professional audiences in the performance of course assignments.
- 4. Evaluate accuracy of professional and lay resources for nutrition-related complementary and alternative medicine (CAM) products.
- 5. Demonstrate knowledge of the impact of culture and socioeconomic status on consumers' food and nutrition behaviors.
- 6. Demonstrate knowledge of ethical principles in community nutrition research and practice.

NDFS 401 : Community Nutrition Fieldwork. (.5:0:1.5)

WHEN TAUGHT: Fall
PREREQUISITE: Dietetics major status; concurrent enrollment in NDFS 400.
DESCRIPTION: Fieldwork experience in public health and community nutrition programs.
NOTE: Flu vaccine and immunization record is required. Fee may be involved.

Course Outcomes
There are no course outcomes available

NDFS 405 : Nutrition Assessment Lab. (.5:0:3)

PREREQUISITE: NDFS 356
DESCRIPTION: Developing skill in anthropometric, biochemical, clinical, and dietary parameters of nutritional assessment.

Course Outcomes

- Demonstrate the ability to locate, interpret, evaluate and use professional literature in the process of nutritional assessment.
- Accurately perform and interpret assessment procedures (the first step in the nutrition care process) to identify nutrition-related problems.
- Acreditation Council for Education in Nutrition and Dietetics Core Knowledge for the RDCore KnowledgeBy the conclusion of the course, students will:Measured/Met by:KRD 1.1Demonstrate the ability to locate, interpret, evaluate and use professional literature in the process of nutritional assessmentCompetency Sign-off, Blood Pressure Certification, Lab WorksheetsKRD 3.1Accurately perform and interpret assessment procedures (the first step in the nutrition care process) to identify nutrition-related problemsCompetency Sign-off, Lab WorksheetsKRD 4.2Apply safety principles in laboratory procedures regarding blood-borne pathogens and the disposal of biohazardous wasteQuiz2012 standards
- Apply safety principles in laboratory procedures regarding blood-borne pathogens and the disposal of biohazardous waste.

NDFS 424 : Nutrition Through the Life Cycle. (2:2:0)

WHEN TAUGHT: Winter
PREREQUISITE: NDFS 300; or NDFS 305
DESCRIPTION: Nutritional requirements, diet, and health concerns for pregnancy and lactation; infants; toddlers and preschoolers; school-age children; adolescents; and older adults.

Course Outcomes

- 1. Demonstrate knowledge of evidence-based nutrient requirements (including the rationale for specific requirements throughout the life cycle) and nutritional status assessment methods used to determine diet adequacy among pregnant and lactating women; infants; children; adolescents; and older adults.
- 2. Assess the nutritional status of a pregnant woman and provide appropriate recommendations for dietary improvement based on nutrient requirements during this life stage.
- 3. Assess the nutritional status of a young child and provide appropriate recommendations for dietary improvement based on nutrient requirements during this life stage.
- 4. Effectively write a scientific review paper based on searching, evaluating, and synthesizing previously published peer-reviewed research.
- 5. Evaluate and offer constructive feedback of peers' written works in a manner consistent with the "real-world" professional scientific article review process.

NDFS 435 : Nutritional Biochemistry. (4:4:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: NDFS 200 & PDBIO 305 & CHEM 285; or NDFS 200 & PDBIO 305 & CHEM 481
DESCRIPTION: Metabolic interrelationships among nutrients.

Course Outcomes

- Demonstrate ability to search, interpret, and summarize original scientific information in an efficiently written scientific paper.
- Demonstrate knowledge of nutrient chemical structures, food sources, digestion, absorption, transport, metabolism and functions, and the metabolic consequences of nutrient deficiencies, interactions, imbalances and toxicities.
- Demonstrate knowledge of appropriate design for scientific experiments.
- Understand the biochemical functions and pathways of nutrients in the body.
- Identify physiological, biochemical and metabolic changes associated with deficient nutrient intake, excessive nutrient intake and selected metabolic diseases.

NDFS 440 : Teaching Methods in Dietetics. (3:3:0)

WHEN Fall

TAUGHT:
DESCRIPTION: Learning theory; curriculum development and dissemination; nutrition counseling; for dietetics majors.

Course Outcomes
- Demonstrate an understanding of the theories of teaching and learning
- Develop lesson plans, to include behavioral objectives, concepts, and learning experiences, and domain of learning
- Demonstrate the ability to meet the varied learning styles of individuals
- Use a variety of instructional methods
- Develop appropriate educational and visual support materials for individual or group instruction
- Demonstrate ability to effectively teach and/or counsel individuals and groups
- Identify and use theories/methods of counseling and interviewing individuals
- Discuss effective use of print and broadcast media
- Demonstrate an understanding of pre-assessment, and of formative and summative evaluation techniques
- Identify the impact of health beliefs and stages of change on education.
- Dress professionally when in the teaching role

NDFS 445 : Foodservice Systems. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: NDFS 374
DESCRIPTION: Input, transformation, and output in the food service system; emphasizes procurement, production, service, and sanitation.

Course Outcomes
- Apply knowledge of management functions and skills to the technical operation of a foodservice system, and compare foodservice operations through application of systems theory
- Discuss the response of industry segments to current societal, demographic, technological, and menu trends
- Discuss the procurement subsystem and the functions of that subsystem, including:The functions of the marketing channel and its agents;Value analysis, sensory analysis, and other tools used in selection of products appropriate for organization's needs;Laws, standards, terminology, specifications, and references for the purchase of food, supplies, and services;Vendor selection and evaluation;Purchasing methods and procedures; and legal and ethical aspects of purchasing
- Identify managerial roles in the food production subsystem, including:Use of forecasting models;Planning and purchasing equipment; Principles of facility design and work flow; and Principles of ergonomics and productivity enhancement.
- Explain the distribution and service subsystem, including:Delivery systems for various types of foodservices;Types of table and self service;Large equipment and small wares used in distribution and service;Service oriented organizations
- Discuss the sanitation and maintenance subsystem from the standpoint of personnel, product, and place
- Identify the relationship of quality assessment programs, including Joint Commission, to foodservice subsystems and the organization
- Identify the interrelated functions of the procurement, production, distribution/service, and maintenance subsystems of a foodservice operation
- Describe the monitoring and marketing of nutrition throughout the foodservice system
- Describe environmental issues related to food production and service.

NDFS 458 : Management in Dietetics. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: NDFS 445
DESCRIPTION: Management cycle and theory applied to clinical and administrative dietetics.

Course Outcomes
- Explain dietetics management in the context of a system.
- Discuss group dynamics and work group formation and participate effectively in group tasks.
- Identify and use principles of effective communication and negotiation.
- Identify tools used and steps in the decision making and planning processes.
- Identify the management functions, including planning, organizing, staffing, leading, monitoring, and evaluating.
- Use financial planning, control, and budgeting tools.
- Identify principles of human resource management, including determining manpower needs, recruiting and interviewing, orientation and training, performance appraisal, diversity issues, conflict management, and labor relations laws.
- Describe theories of effective management and leadership.
- Identify theories of motivation and organizational change.
- Discuss concepts of disaster planning and risk management.
- Explain management information systems in dietetics

NDFS 466 : Advanced Dietetics Practice. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: NDFS 356 & NDFS 440 & NDFS 458
DESCRIPTION: Skill development in specialized topics of medical nutrition therapy and administrative dietetics.

Course Outcomes
- Apply the principles of the metabolic response to stress to the critical care setting.
- Make recommendations, calculate, and monitor all forms of nutrition support in acute care, home care, and extended care settings.
- Apply the Nutrition Care Process and the principles of Medical Nutrition Therapy to the following conditions: HIV disease, thermal injury, diabetes, high risk pregnancies, high risk infants, complex pediatric disorders, developmental disorders, metabolic disorders.
- Use and interpret menu engineering data in making pricing and menu decisions.
- Apply knowledge of the systems approach and management issues in foodservice, clinical, and community settings to coordinate a department set-up.

- Accreditation Council for Education in Nutrition and Dietetics Core Knowledge for the RDCore Knowledge for the RDBy the conclusion of the course, students will:Measured/Met by:KRD 1.1, 3.1Metabolic Responses. Apply the principles of the metabolic response to stress to the critical care setting.Clinical Nutrition WorksheetsNutrition Support WorksheetsKRD 1.1, 3.1Nutrition Support. Make recommendations, calculate, and monitor all forms of nutrition support in acute care, home care, and extended care settings.Clinical Nutrition WorksheetsNutrition Support WorksheetsKRD 1.1, 3.1, 4.5Nutrition Care Process and Principles of Medical Nutrition. Apply the Nutrition Care Process and the principles of Medical Nutrition Therapy to the following conditions: HIV disease, thermal injury, diabetes, high risk pregnancies, high risk infants, complex pediatric disorders, developmental disorders, metabolic disordersClass Discussions Clinical WorksheetsKRD 4.2, 5.1Menu Engineering Data. Use and interpret menu engineering data in making pricing and menu decisions.Capstone Management ProjectKRD 2.1, 2.3, 4.1, 4.2, 4.3, 4.4, 5.1Systems Approach and Management Issues. Apply knowledge of the systems approach and management issues in foodservice, clinical, and community settings to coordinate a department set-up.Capstone Management Project2012 standards

NDFS 475 : Research Methods in Dietetics. (2:2:0)

WHEN TAUGHT: Winter

PREREQUISITE: Senior status in dietetics program.

DESCRIPTION: Research techniques in a variety of dietetics practice areas.

Course Outcomes

- Identify types of research and their appropriate use, including: research question, sample selection, methodologies, data collection methods, data analysis methods
- Demonstrate how to locate, interpret and evaluate and use professional literature to make ethical evidence based practice decisions
- Use current information technologies to locate and apply evidence based guidelines and protocols
- Design research projects using appropriate methods of sample selection and data collection
- Develop survey questionnaire for appropriate research objectives
- Utilize visual aids and communication skills to present concepts in oral and written reports
- Interpret and evaluate research reports in literature
- Interpret and apply basic statistics
- Develop ability to see research possibilities in variety of dietetic employment settings

NDFS 490 : Professionalism Seminar. (2:2:0)

WHEN TAUGHT: Winter

PREREQUISITE: Senior status in dietetics program.

DESCRIPTION: Issues in professional practice.

Course Outcomes

- Understand the ethics of care, including the ADA Standards of Practice and Code of Ethics. Be able to relate these to the issues of death and dying
- Understand changing health care delivery systems, the role of Joint Commission, ADA's Nutrition Care Process and Model, and implications for dietitians; interact with other health care professionals
- Complete a personal portfolio, which includes a professional resume; be prepared for a professional interview, including appropriate dress
- Understand current professional issues as related to the Academy, including reimbursement, Public Policy, the Journal, and Academy Membership
- Accreditation Council for Education in Nutrition and Dietetics Core Knowledge for the RDCore KnowledgeBy the conclusion of the course, students will:Measured/Met by:KRD 2.1, 4.3, 4.4, 4.5Understanding Dietetics Processes. Understand changing health care delivery systems, the role of Joint Commission, AND's Nutrition Care Process and Model, coding/billing and implications for dietitians; interact with other health care professionalsInterview with Health Professional, Class DiscussionKRD 2.1Professionalism. Complete a personal portfolio, which includes a professional resume; be prepared for a professional interview, including appropriate dress Portfolio, Resume, Journal Presentation, Interview with Health ProfessionalKRD 2.3Ethics of Care. Understand the ethics of care, including the AND Standards of Practice and Code of Ethics. Be able to relate these to the issues of death and dying Ethics scenarios, Class discussionKRD 2.3, 4.3Professional Issues Related to the Academy of Nutrition and Dietetics. Understand current professional issues as related to the Academy, including reimbursement, Public Policy, the Journal, Academy Membership, and Scope of PracticeInterview with a Health Professional, The Academy Journal Presentations, Scope of Practice, Class discussion2012 standards

NDFS 491 : Internship Preparation. (1:1:0)

WHEN TAUGHT: Fall

PREREQUISITE: Senior status in dietetics program.

DESCRIPTION: Selecting internship sites and preparing dietetic internship application packet.

Course Outcomes

- Prepare an effective application packet for the dietetic internship or for other employment/graduate school pursuits
- Consider factors relevant to selecting dietetic internships to which to apply
- Establish realistic plans for life following graduation

PDBIO 365 : Pathophysiology. (4:4:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 305; or PDBIO 362

DESCRIPTION: Variations in physiological mechanisms that account for development of common disturbances in normal control and activities of body's organs and organ systems.

Course Outcomes

- Students will exhibit an integrative understanding of the biochemistry, molecular biology, genetics, cell biology, microbiology, environmental biology, and physiology related to the prevention, development, and treatment of common diseases.

- Students will demonstrate through case study analysis a command of problem solving skills related to the diagnosis and treatment of pathophysiological conditions.
- Pupils will manifest a command of the physiology and pathophysiological vocabulary necessary to effectively communicate with other biomedical professionals and the general public.
- Students will be able to articulate the ethical issues related to the treatment and prevention of pathophysiological conditions.
- Students will manifest an increase in their respect for the human body and adopt a life style consistent with this respect.

Recommended Courses

BUS M 201 : Financial Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Acc 200 or equivalent.

DESCRIPTION: Financial statement analysis, financial planning, sources of financing, working capital management, risk and return, and valuation.

Course Outcomes
- Use fundamental analysis to conduct a firm performance evaluation.
- Construct a financial forecast for a term.
- Employ time value of money to solve common financial problems.
- Make corporate investment decisions using capital budgeting.
- Be able to value firms, bonds, and stocks.
- Understand how entrepreneurial and corporate finance differ.

BUS M 241 : Marketing Management. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Marketing's role in society and the firm, marketing opportunities, the consumer market, and management of marketing mix.

Course Outcomes
- Understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers.
- Describe how specific firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Design a marketing plan for a new venture by applying the appropriate tools and approaches studied

IS 100 : Computer Spreadsheet Skills. (.5:0:1)

WHEN TAUGHT: Spring; Summer

DESCRIPTION: Basic computer skills, focusing on spreadsheet and database programs. No technical background necessary.

Course Outcomes
- Students will be able to construct an Excel Spreadsheet with appropriate formulas, functions, labels, charts, media inserts, hyperlinks, and data base functions – and output the report.

NDFS 310 : Nutrition and Metabolism in Sports and Exercise. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: NDFS 100 & PDBIO 305

DESCRIPTION: Scientific basis for the role of nutrition in human performance. Critical evaluation of popular practices; making optimal food choices for physical activity.

NOTE: This course was formerly named Sports Nutrition.

Course Outcomes
- Students will apply their current understanding of nutrition to aspects of physical performance. Describe the factors (exercise intensity, duration, substrate availability and endocrine) that affect energy utilization.
- Search, interpret, and summarize original scientific information. Evaluate nutritional claims for scientific accuracy.
- Apply evidence-based nutrition recommendations for sports and exercise in real or hypthetical situations.

NDFS 380 : International Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 100

DESCRIPTION: Causes and consequences of nutrient deficiencies common in developing countries. Appropriate interventions to prevent or treat malnutrition.

Course Outcomes
- Relate critical nutrient requirements deficiencies to nutritional diseases and poor cognitive devolopment
- Understand the breadth of undernutrition, poverty and hunger that plague the developing world.
- Understand the scientific literature that relates to nutional problems in devloping societies
- Relate the nutritional status of undernourished children to their diets and suggest plausible solutions

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes
There are no course outcomes available

TMA 150 : Public Speaking. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Principles and methods of public speaking; speaking experiences.

Course Outcomes
- Develop analytical listening and observation skills.
- Know how to speak publicly so your audience will really listen and understand.
- Construct and deliver effective extemporaneous public speeches.
- Manage speech anxiety and effective use nonverbal communication to inform, persuade, enlighten, and impact your audience.
- Be able to produce and employ effective visual aids in your presentations.

Recommended Minors

The following minors are very complementary to a dietetics major, but any area of interest could be considered:

Business
Gerontology (See School of Family Life).
International Development
Spanish

*Hours include courses that may fulfill university core requirements.

The Discipline

Food science is the multidisciplinary study of food and the application of knowledge thus gained to developing food products and processes, preserving and storing food, and assuring food safety and quality. Food science addresses the conversion of raw agricultural products into a nutritious, convenient, and economical food supply. Most of the food products available in grocery stores were developed, produced, and tested by food scientists. Students graduating in food science are well prepared for immediate employment in the food industry. The technical track curriculum is approved by the Institute of Food Technologists, the principal professional organization of food scientists, and provides excellent preparation as a premedical, predental, or other preprofessional major. With the addition of one credit hour, students graduating in the technical track are able to obtain a minor in chemistry. Students pursuing the management track are eligible to apply for a business minor and are well prepared for graduate studies in a Master of Business Administration (MBA) program.

Valuable experience is gained through numerous opportunities available in the program, including faculty-mentored research, employment within the department, and paid food industry internships. Students also develop a network of professional contacts through participation in the Food Science Club, professional organizations, and national competitions. Scholarships are available from department, college, university, and professional organizations.

Career Opportunities

Exciting careers are available in the worldwide, multibillion dollar food industry in such areas as food product development, production management and sales, ensuring food safety and quality, or basic research. Salaries are highly competitive. The many facets of food science provide employment in large and small food companies, food ingredient companies, government agencies, and universities. Graduates are prepared for immediate employment, further study toward advanced degrees, or professional programs such as medicine, dentistry, pharmacy, law, and business.

Program Requirements | View MAP | View Program Outcomes

1. Consult with a faculty advisor prior to finalizing your curriculum plan.
2. Complete the following core requirements:

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.
DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.
NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

MMBIO 221 : General Microbiology. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Any biology course.
RECOMMENDED: Any chemistry course.
DESCRIPTION: Microbial world, emphasizing communicable diseases, their causes and control.
NOTE: Recommended for students seeking a liberal education in microbiology who do not have the prerequisites to take the more advanced courses.

Course Outcomes

- Explain and discuss the ways by which microbiologists study microorganisms.
- Discuss the principle infectious diseases that affect mankind, including how they are transmitted, treated, controlled and prevented.
- Differentiate between the types of microorganisms by identifying relevant structure and their function in the biosphere.
- Propose microbial solutions to global problems.
- Describe how the human body defends itself against infectious agents.

MMBIO 222 : General Microbiology Laboratory. (1:0:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBio 221 or concurrent enrollment.

Course Outcomes

- Use the bright field microscope to view and interpret microbiological specimens
- Use proper aseptic techniques int he handling and transfer of microbiological specimens
- Use standard microbiological media to culture and identify common microbiological specimens
- Use standard microbiology laboratory equipment correctly
- Follow an experimental protocol, collect and organize data, present data in an appropriate form, assess the validity of the data, and draw appropriate comclusions based on the results
- Integrate information and skills gained int eh course to make informed judgements about the role of microorganisms in everyday life
- Use accepted safety protocols when handling microbiological specimens and chemicals

NDFS 250 : Essentials of Food Science. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 101; or CHEM 105; or SFL 110; concurrent enrollment in NDFS 251

DESCRIPTION: Overview of food science, including chemical, physical and microbiological principles related to food processing, storage, and utilization. Current issues in food science.

NOTE: This class should be taken concurrently with NDFS 251.

Course Outcomes

- Explain the basic concepts and principles of Food Science
- Recognize (distinguish) current topics in the news and in lay literature as being related to Food Science and Technology
- Evaluate the scientific validity of various consumer concerns regarding food production, distribution, preservation, storage and utilization
- Obtain further information on Food Science topics through library research of the scientific literature
- Explain how Food Science knowledge applies to your major field of study, and make the connection between what you're learning and what you plan to do after graduation
- Solve Food Science related problems.
- Determine if you more fully enjoy eating, understanding what happens to food between farm gate and dinner plate

NDFS 251 : Essentials of Food Science Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 101; or CHEM 105; or SFL 110; Concurrent enrollment in NDFS 250.

DESCRIPTION: Laboratory experience in the chemistry of changes occurring during food processing, storage, and utilization.

NOTE: This class should be taken concurrently with NDFS 250.

Course Outcomes

- Understand the basic chemistry involved in ripening, processing, and storing food*Relates to Program Learning Outcome: Demonstrate an understanding of the chemical changes occurring during food processing and storage, including reactions involving carbohydrates, protein and fats
- Develop the ability to work in teams to carry out laboratory experiments
- Understand key elements of food required for proper preservation and safety*Relates to Program Learning Outcome: Demonstrate an understanding of the role of microorganisms in food processing, food preservation, and food safety with respect to pathogens, spoilage, and fermentative microorganisms, and apply the basic elements of sanitation and quality assurance programs to understand and control microbial effects in food

NDFS 350 : Food Analysis. (4:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 250 & NDFS 251 & CHEM 285; or NDFS 250 & NDFS 251 & CHEM 352

DESCRIPTION: Principles, methods and techniques of qualitative and quantitative physical, chemical, and biological analysis of food and food ingredients.

Course Outcomes

- Explain the principles behind the analytical techniques used in food analysis (primarily chemical and physical analyses)
- Measure various components of food (found on the Nutrition Facts label) using laboratory techniques common to food chemistry and food analysis
- Select the appropriate analytical technique when presented with a practical problem
- Prepare a written report and brief oral presentation covering the quality assurance tests required for the analysis of raw ingredients, intermediate products and final product of a food commodity having a standard of identity.

NDFS 355 : Food Process Engineering. (4:3:3)

WHEN Winter

TAUGHT:

PREREQUISITE: PHSCS 105 & MATH 112; or PHSCS 105 & MATH 119; Food Science majors only.

DESCRIPTION: Mass and energy balances, thermodynamics, fluid flow, heat and mass transfer; unit operations in food processing, including thermal processing, frying, irradiation, refrigeration, freezing, and dehydration.

Course Outcomes

- Solve fluid flow problems to determine velocities, flow volumes, friction losses. Size pipes and select appropriate pump types and select appropriate sizes.
- Compare the effectiveness and amount of heat exchanged in tubular and plate heat exchangers
- Calculate the amount of heat recovered in the regeneration section of a HTST pasteurizer
- Determine effect of flow rate on conductivity of heat exchange partition in a tubular and plate heat exchanger
- Determine the coefficient of performance for Freon and ammonia refrigeration cycles and make a judgment as to which is appropriate for a hypothetical application
- Calculate the amount of steam needed to achieve a hypothetical heating operation
- •Describe the flow of a HTST pasteurizer
- Given an required Fo, be able to do a heat penetration test on a low acid food and determine the process time needed to achieve the required kill
- Be able to concentrate a fluid product on a RO system or separate proteins from salts and sugars on a UF system. Explain the drop in flux rates with time, module design, and construction and care of membranes
- Diagram the operations in a spray drying system and explain what suppresses the product temperature during drying
- Describe the four systems needed and the role each plays in a freeze drying system
- Explain the function and operation of a flow diversion valve.
- Describe the balance of lethal temperature, time, bacterial control and quality on thermally processed products
- Compare the process flow, processing conditions, products, and advantages and disadvantages of process options for long term preservation: retorts, agitating retorts, UHT, High pressure, freeze drying, air drying, spray drying
- Describe the measures taken to achieve the highest quality in frozen foods
- Know the chemistry and barrier characteristics of the commonly used polymers
- Know the functions of a package and be able to determine what functions the package is performing in an array of packaging examples
- Know the environmental implications of each of a wide variety of commonly used packaging materials

NDFS 361 : Food Microbiology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBIO 221 & MMBIO 222

DESCRIPTION: Pathogenic and spoilage microorganisms in foods and their control. Beneficial microorganisms in food systems. Influence of the food system on growth and survival of microorganisms.

Course Outcomes

- Understand the growth requirements of common food borne pathogens and…Be able to attribute the characteristics of a food borne illness with unknown etiology to the most likely organism. Differentiate which organisms would be likely to grow in a specific food product
- Understand intrinsic and environmental aspects of foods and how they can be modified to affect the growth and metabolism of food borne microorganisms to include spoilage, pathogenic, and beneficial organisms.
- Carry out a series of laboratory experiments aimed at isolating and identifying common food borne microbial pathogens
- Classify spoilage microorganisms according to the food or foods they are most likely to affect based on the intrinsic and environmental characteristics of the food and compare to various storage methods to determine which method would be most appropriate for the given food product
- Design and carry out a laboratory experiment to evaluate the microbial safety of a common food product

NDFS 362 : Food Commodity Processing. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: NDFS 250 & NDFS 251; Food Science majors only.

DESCRIPTION: Characteristics of raw food material; principles of food preservation and food processing techniques; packaging materials and methods; sanitation and water and waste management.

Course Outcomes

- Prepare a flow chart of a plant that produces masa products from corn and point out how raw material and process can be varied to result in different masa products
- Diagram the wheat milling flow and explain the grinding and separation processes that resulted in each stream. Describe the characteristics and uses of different varieties of wheat.
- Prepare a flow chart for a commercial bakery. Include sources and types of ingredients, function of different processes and quality assurance measures
- Analyze the flow of a dry blend soup line and explain how quality blend uniformity and functionality is assured
- Describe the quality assurance checks on milk coming into a dairy plant, diagram the flow and explain the function of each process used to produce each of their products.
- Diagram and critique the Deseret Meat Processing operation from kill to meat cuts to further processed products.
- Diagram and critique a fruit canning operation. Describe the raw material, how it is handled, sorted, graded, how the quality and safety of the canned fruit and the integrity of the can is assured.
- Prepare flow diagrams and explanations for the processes involved in preparing drinking water for a system that uses surface water for its source and for a system that uses deep well and spring water for its source.
- Design and diagram a system that will treat waste water from Provo City so that it is fit to release into Utah Lake. Demonstrate understanding of the function of each unit operation. Include control measures to assure quality

NDFS 462 : Food Regulations and Quality Assurance. (2:2:0)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 121 & NDFS 250 & NDFS 251

DESCRIPTION: Federal and international food regulations and methods of assuring food quality.

Course Outcomes

- Apply ethical reasoning to make business decisions based on principles of integrity and honesty
- Be able to locate, retrieve and interpret specific laws, regulations, guidelines and directives relating to food, its manufacture, labeling, distribution and sale
- Be able to apply the principles of food science and statistics to control and assure the quality of food products
- Prepare a HACCP documentation system for any defined food product/process
- Explain how the legislative, executive, and judicial branches of federal and state government function and interact to regulate and control the safety, wholesomeness, and economy of the food supply
- Prepare a legal food label

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: High school algebra and trigonometry.

RECOMMENDED: Concurrent enrollment in Phscs 107.

DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes

There are no course outcomes available

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

3. Complete one of the following tracks:
   A. Food science technical track:
      1. Complete the following:

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

Course Outcomes

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

Course Outcomes

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the

total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes
- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

Course Outcomes
- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 352 or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.

NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes
- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

(1 hour minimum)

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes
- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below

Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

NDFS 200 : Nutrient Metabolism. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: NDFS 100; Organic chemistry or concurrent enrollment.

DESCRIPTION: Chemical structures of nutrients, their food sources, requirements, digestion, absorption, transport, metabolism, functions, storage and excretion; metabolic consequences of nutrient deficiencies, interactions, imbalances, and toxicities.

Course Outcomes
- Identify chemical structures of amino acids, lipids, carbohydrates, and vitamins.
- List functions, food sources, and consequences of deficiencies and toxicities for each of the essential nutrients.
- Explain the metabolic and physiological basis for the consequences of dietary practices that affect nutrient levels, and relate the consequences to the roles of essential nutrients in metabolic processes.
- Analyze diets and alter food intake to reach predetermined targets for consumption of specific dietary components or to achieve an overall dietary pattern.
- Find answers to questions and summarize results from original research reported in published peer-reviewed scientific journals.

NDFS 450 : Food Chemistry. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: NDFS 250 & NDFS 251 & CHEM 285; or NDFS 250 & NDFS 251 & CHEM 352

DESCRIPTION: Structure and properties of food components, including water, carbohydrates, protein, lipids, other nutrients, and food additives. Chemistry of changes occurring during processing, storage, and utilization.

Course Outcomes
- Explain the chemistry of food components, including their properties and reactions
- Explain the major chemical reactions that occur during food processing and storage, including those that limit food shelf life
- Solve real-world problems related to food chemistry
- Write a research proposal on a food chemistry topic. Include objectives, literature review, experimental design and references

NDFS 464 : Food Sensory Evaluation. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 121 & NDFS 250 & NDFS 251; This class should be taken concurrently with NDFS 465.

DESCRIPTION: Analytical and affective methods of assessing sensory properties of food using statistical methods. Laboratory experience in sensory research and techniques. Integrative capstone course.

Course Outcomes
- Use the computer to prepare and deliver questions to panelist.
- Use a computer to collect data from consumer panelists doing affective tests
- Use statistical packages such as SAS to do statistical analysis such as one and two way ANOVA and to make inferences from actual sensory data
- Create and use a spread sheet to display and analyze data, make calculations and do statistical analysis
- Use a computer to write reports.
- Generate a hypothesis, test it using a consumer or discrimination panel, and prepare a report for a client on the findings.
- Use binomial statistics to draw conclusions on categorical data
- Collect data, analyze it using ANOVA, make inferences from the F values and p>F values on the ANOVA result
- Determine your threshold for four basic tastes
- Describe sensory biases and how to best deal with them
- Plan, conduct and report on a discrimination test and use binomial statistics to make inferences
- Demonstrate understanding of preference and ranking tests and use of binomial statistics to make inferences
- Show how to determine when Quantitative Descriptive panelists are trained and when they need more training
- Lead and participate in groups in developing hypotheses, planning and conducting experimentation to test that hypothesis

NDFS 465 : Food Product Development. (3:1:6)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 361 & NDFS 362 & NDFS 462; This class should be taken concurrently with NDFS 464.

DESCRIPTION: Integration and application of food science principles to develop new food products. Laboratory experience in food product design and development. Integrative capstone course.

Course Outcomes
- Prepare raw material, product, and process specifications for a product and related commercial manufacturing process
- Work with a team in successfully commercializing a new or improved food product
- Coordinate, plan, and execute a stability test
- Coordinate, plan, and execute a plant trial
- Prepare and follow workable project time-lines for multiple development projects
- Coordinate, plan, and execute an appropriate consumer test for guidance or decision making
- Properly prepare and document all information required for a finished food product label
- Keep a precise, well-documented laboratory notebook that will stand up under scrutiny in a court of law

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 105 or equivalent.

RECOMMENDED: Concurrent enrollment in Phscs 108.

DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes
There are no course outcomes available

TMA 150 : Public Speaking. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Principles and methods of public speaking; speaking experiences.

Course Outcomes
- Develop analytical listening and observation skills.
- Know how to speak publicly so your audience will really listen and understand.
- Construct and deliver effective extemporaneous public speeches.
- Manage speech anxiety and effective use nonverbal communication to inform, persuade, enlighten, and impact your audience.
- Be able to produce and employ effective visual aids in your presentations.

2. Complete one course from the following:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes
- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

MATH 119 : Introduction to Calculus. (4:4:1)

OFFERED: Independent Study only.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 and Math 111; or equivalent.

DESCRIPTION: Introduction to plane analytic geometry and calculus.

Course Outcomes
- This course is designed to provide beginning undergraduate students a first exposure to Calculus concepts, theorems, and techniques. In general, theorems will not be proved. An understanding of the theorems and their applications to solve calculus problems will be taught. Students will be expected to develop effective problem solving skills based on their understanding of the theory and not just memorize a set of routines to solve problems. For a more detailed course description, visit the Math 119 Wiki page.

B. Food industry management track:

1. Complete the following:

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.

DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

Course Outcomes

- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.
- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

BUS M 201 : Financial Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Acc 200 or equivalent.

DESCRIPTION: Financial statement analysis, financial planning, sources of financing, working capital management, risk and return, and valuation.

Course Outcomes

- Use fundamental analysis to conduct a firm performance evaluation.
- Construct a financial forecast for a term.
- Employ time value of money to solve common financial problems.
- Make corporate investment decisions using capital budgeting.
- Be able to value firms, bonds, and stocks.
- Understand how entrepreneurial and corporate finance differ.

BUS M 488 : Agribusiness Management 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: ACC 200 & BUS M 201 & ECON 110; or ACC 200 & FIN 201 & ECON 110

DESCRIPTION: Concepts, tools, and approaches to understanding competitive forces and the development of sustainable competitive advantage for firms in the food, fiber, and horticulture industries.

Course Outcomes

- Understand the concepts and models of strategic management presented in the course.
- Appreciate the roles, responsibilities, and potential influence of business leaders.
- Further develop the personal sense of ethics and integrity that guide decision making in business, community, church, and family relationships.
- Analyze the competitive situation facing a firm using the models of strategic management presented in class.
- Apply the models of strategic management presented in the course to arrive at recommendations that will help organizations achieve and sustain competitive advantage.
- Persuasively communicate analytical conclusions and recommendations in verbal and written form.
- Effectively participate in group work.

BUS M 489 : Agribusiness Management 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: ACC 200 & BUS M 201 & ECON 110; or ACC 200 & FIN 201 & ECON 110

DESCRIPTION: Developing and implementing marketing plans and programs for companies participating in the value chain of agribusiness industries.

Course Outcomes

- Students will understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers in life sciences industries.
- Describe how life sciences firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Students will understand the basics of the market research process.
- Students will study current marketing techniques in life sciences-based industries.
- Students will learn to apply faith-based, moral reasoning and personal integrity in professional life.
- Students will learn to work effectively within a team and to communicate effectively in business environments.

CHEM 285 : Introductory Bio-organic Chemistry. (4:4:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

DESCRIPTION: Principles of organic chemistry and biochemistry relating to biomolecule structure and function.

Course Outcomes

- Students will understand the metabolism of carbohydrates, lipids, and proteins in humans. They will be able to describe in structures and words the metabolism of sugars through the pathways of glycolysis, the citric acid cycle, and the electron transport chain.
- Students will understand the structure and reactivity of organic functional groups, such as alcohols, aldehydes, carboxylic acids, and amides. For example, students will learn that aldehydes and ketones typically undergo addition reactions.
- Students will understand the structure and reactivity of the biomolecules that have those functional groups. For example, students will be able to demonstrate that carbohydrates are aldehydes and ketones that undergo addition reactions to form hemiacetals and polysaccharides with acetal linkages.

ECON 110 : Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
There are no course outcomes available

: Honors Economic Principles and Problems.

Course Outcomes

NDFS 100 : Essentials of Human Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer
DESCRIPTION: Food-oriented study of nutritional facts and principles as a basis for dietary choices; consequences of choices; scientifically examining controversial topics.

Course Outcomes

- Apply the scientific method to identify and interpret credible nutrition information.
- Identify, interpret, and apply nutrition information.
- Identify functions of nutrients and their major food sources.

NDFS 191 : Careers in Food Science. (1:1:0)

WHEN TAUGHT: Fall; Winter
DESCRIPTION: Guest lectures and exposure to vocations in food science.

Course Outcomes

- This is an introductory course for food science and is designed for undergraduate students who have not selected a major and/or are considering Food Science or Food Industry Management as a possible major.

NDFS 399R : Academic Internship. (1-9:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Instructor's consent.
DESCRIPTION: Off-campus work experience sponsored by industrial, government, or academic institutions.

Course Outcomes

- Gain practical experience in food science and related areas.
- Apply classroom knowledge to practical situations through observation and involvement in different levels of the organization.
- Develop confidence in personal judgment and gain maturity and self-confidence.
- Gain exposure to a company or agency and a specific area of employment to determine whether they want that area for their life's work; evaluate the company for permanent employment.

(1 hour minimum required)

ORG B 320 : Organizational Effectiveness. (3:Arr:0)

OFFERED: Independent Study also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Theories and concepts for creating effective organizations, e.g., individual, group, and organizational processes and human resource functions, including selection, compensation, and performance management.
NOTE: Taught online.

Course Outcomes
There are no course outcomes available

2. Complete one course from the following guest lecture series:

BUS M 371R : Entrepreneurship Lecture Series. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Lectures by successful entrepreneurs on subjects significant to entrepreneur-type opportunities.

Course Outcomes
- Recognize and resolve ethical challenges and choices in specific organizational contexts.
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life

BUS M 380 : Executive Lectures. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: Lectures by top executives on subjects significant to executive leadership.

Course Outcomes
- Recognize and resolve ethical challenges and choices in specific organizational contexts.
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life.

BUS M 382 : Financial Services Lecture Series. (1:1:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Lectures by executives on financial services topics.

Course Outcomes
- · Recognize and resolve the typical ethical challenges that confront people working in financial services
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life.
- Understand the major career pathways that can be pursued with academic training in finance.

3. Complete one of the following major electives:

BUS M 372 : Basic Entrepreneurship Skills. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Practical aspects of business formation and growth; key skills and principles needed to successfully start up and grow a business.

NOTE: For non-Marriott School of Management students.

Course Outcomes
- Participate effectively on an entrepreneurial founding team and help create a start-up business.
- Formulate strategies to overcome common start-up business challenges.
- Write self-reflective papers on a variety of business topics, articles, and books in order to help them discover their entrepreneurial spirit.
- Understand and apply entrepreneurial terminology, global enterprise issues, and ethical decision-making to business cases.

NDFS 200 : Nutrient Metabolism. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: NDFS 100; Organic chemistry or concurrent enrollment.

DESCRIPTION: Chemical structures of nutrients, their food sources, requirements, digestion, absorption, transport, metabolism, functions, storage and excretion; metabolic consequences of nutrient deficiencies, interactions, imbalances, and toxicities.

Course Outcomes
- Identify chemical structures of amino acids, lipids, carbohydrates, and vitamins.
- List functions, food sources, and consequences of deficiencies and toxicities for each of the essential nutrients.
- Explain the metabolic and physiological basis for the consequences of dietary practices that affect nutrient levels, and relate the consequences to the roles of essential nutrients in metabolic processes.
- Analyze diets and alter food intake to reach predetermined targets for consumption of specific dietary components or to achieve an overall dietary pattern.
- Find answers to questions and summarize results from original research reported in published peer-reviewed scientific journals.

NDFS 450 : Food Chemistry. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: NDFS 250 & NDFS 251 & CHEM 285; or NDFS 250 & NDFS 251 & CHEM 352

DESCRIPTION: Structure and properties of food components, including water, carbohydrates,

protein, lipids, other nutrients, and food additives. Chemistry of changes occurring during processing, storage, and utilization.

Course Outcomes
- Explain the chemistry of food components, including their properties and reactions
- Explain the major chemical reactions that occur during food processing and storage, including those that limit food shelf life
- Solve real-world problems related to food chemistry
- Write a research proposal on a food chemistry topic. Include objectives, literature review, experimental design and references

NDFS 465 : Food Product Development. (3:1:6)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 361 & NDFS 362 & NDFS 462; This class should be taken concurrently with NDFS 464.

DESCRIPTION: Integration and application of food science principles to develop new food products. Laboratory experience in food product design and development. Integrative capstone course.

Course Outcomes
- Prepare raw material, product, and process specifications for a product and related commercial manufacturing process
- Work with a team in successfully commercializing a new or improved food product
- Coordinate, plan, and execute a stability test
- Coordinate, plan, and execute a plant trial
- Prepare and follow workable project time-lines for multiple development projects
- Coordinate, plan, and execute an appropriate consumer test for guidance or decision making
- Properly prepare and document all information required for a finished food product label
- Keep a precise, well-documented laboratory notebook that will stand up under scrutiny in a court of law

4. During the junior year or upon declaring food science as a major, students are strongly encouraged to select one of the following options to enhance career preparation (students in food industry management track MUST take 1 credit hour of NDFS 399R to graduate):
   A. Choose a research topic and faculty mentor. Working in a research laboratory for 10–20 hours per week over the course of eight months, the student has daily contact with graduate students, technicians, and fellow undergraduate colleagues and frequent interactions with a faculty mentor. Student research often leads to participation in a publication and/or a presentation at a professional meeting. NDFS 494R credit is available.

   B. Produce a senior thesis in collaboration with a faculty mentor, derived primarily from library study that extensively explores the relevant questions. The thesis is written in the format of a scientific review paper. NDFS 494R credit is available.

   C. Work in an approved, faculty-supervised summer internship with a food company (generally the internship does not include study abroad.) NDFS 399R credit is available.

Recommended Courses

Consult with a faculty advisor before selecting:

1. Food science technical track:

CHEM 223 : Quantitative and Qualitative Analysis. (4:2:6)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: CHEM 107; or CHEM 113

DESCRIPTION: Principles of chemical equilibrium, quantitative chemical measurements, and qualitative detection of selected chemical species.

NOTE: Primarily for majors in molecular biology and the life sciences.

Course Outcomes
- Course Objectives: The course is designed to develop research skills. The labwork will have a somewhat bioanalytical focus, e.g. the chemical analysis of biological molecules or biologically related ions and the use of biomolecules in assays. We will work to develop good laboratory practice, both conceptually and practically, and consider how to do good science. The combined lecture/lab approach will be used to help you understand quantitative approaches to analysis, sources of error, and the utility but also limitations of laboratory measurements. You will be asked to apply a portion of this knowledge to your own laboratory determinations. We will also discuss more advanced analytical methods involving chemical separations and instrumental analyses. This course fills one of the requirements for a minor in chemistry.

ECON 110 : Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
There are no course outcomes available

: Honors Economic Principles and Problems.

Course Outcomes

ENGL 316 : Technical Communication. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: First-year writing, junior or senior status.

DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.

NOTE: Carries GE Advanced Written and Oral Communication credit.

Course Outcomes

- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

IAS 220 : Introduction to Development Studies. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Exploration of international development in non-formal education, micro-enterprises, community organizations; hunger, poverty, and other special problems in developing areas of the world.

Course Outcomes

- Upon successfully completing this course, a student will be able to recognize the historical origins of international development and the various agendas that it embodies. Upon successfully completing this course, a student will be able to recognize and articulate the complexity of international development issues and their interdisciplinary nature. Upon successfully completing this course, a student will be able to identify major theories and approaches to international development both in general and across different key disciplines. Upon successfully completing this course, a student will be intellectually ready to embark on an International Development Minor Internship.

MFG 355 : Plastics Materials and Processing. (3:2:3)

WHEN TAUGHT: Winter

PREREQUISITE: ME EN 250; or CH EN 378; or instructor's consent.

DESCRIPTION: Understanding plastic materials, properties, and uses. Survey of plastic-manufacturing processes. Designing plastic products and manufacturing systems.

Course Outcomes

- Understand the behavior and properties of plastic materials as they are affected by manufacturing processes.
- Understand the design of plastic products and the equipment, tooling, and environment necessary for their manufacture.
- Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
- Function effectively on interdisciplinary teams and to demonstrate leadership characteristics
- Apply knowledge of mathematics, statistics, science and engineering in plastics manufacturing.
- Identify, formulate, and solve manufacturing-engineering problems related to plastics.
- Understand the impact of manufacturing engineering solutions in a global, economic, environmental, and societal context, especially as regards plastics.
- Have a knowledge of contemporary issues in plastics manufacturing.

NDFS 100 : Essentials of Human Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Food-oriented study of nutritional facts and principles as a basis for dietary choices; consequences of choices; scientifically examining controversial topics.

Course Outcomes

- Apply the scientific method to identify and interpret credible nutrition information.
- Identify, interpret, and apply nutrition information.
- Identify functions of nutrients and their major food sources.

NDFS 191 : Careers in Food Science. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Guest lectures and exposure to vocations in food science.

Course Outcomes
- This is an introductory course for food science and is designed for undergraduate students who have not selected a major and/or are considering Food Science or Food Industry Management as a possible major.

PHSCS 107 : General Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 105 or concurrent enrollment.

DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 106 or concurrent enrollment

DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PWS 100 : Living with Plants. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Introduction to principles of plant function and diversity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
- Demonstrate a fundamental knowledge of basic principles and concepts of plant biology (i.e., structure, function, and diversity)
- Cultivate an appreciation for the central importance of plants in the way our world and human society functions
- Provide a conceptual framework of how plants influence the environment
- Practice using the scientific method to better understand plant-environment interactions
- Improve verbal and written communication

STDEV 317 : Career Strategies for Employment and Internships. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Preparing for employment and internship opportunities. Practical strategies to facilitate internship and/or career preparation: resumes, cover letters, networking, interviewing, and Internet research.

Course Outcomes
There are no course outcomes available

TECH 201 : History of Creativity and Innovation in the Arts, Science, and Technology 1. (3:3:0)

WHEN TAUGHT: Fall; Spring

DESCRIPTION: Western civilization from Egyptian antiquity to Renaissance from perspective of changes in civilization enabled by technology. Creativity throughout history. How to improve personal creativity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
There are no course outcomes available

TECH 202 : History of Creativity and Innovation in the Arts, Science, and Technology 2. (3:3:0)

WHEN TAUGHT: Winter; Summer

DESCRIPTION: Western civilization from Renaissance to present from perspective of changes in civilization enabled by technology. Creativity throughout history. How to improve personal creativity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
There are no course outcomes available

2. Food industry mangement track:

ENGL 316 : Technical Communication. (3:3:0)

OFFERED: Honors also.

WHEN: Fall; Winter; Spring; Summer

TAUGHT:
PREREQUISITE: First-year writing, junior or senior status.
DESCRIPTION: Effective processes of written, oral, and visual technical communication, including collaborative processes. Writing for academic and professional audiences.
NOTE: Carries GE Advanced Written and Oral Communication credit.

Course Outcomes
- Employ informed and flexible processes for writing and speaking, including: creating and/or finding ideas about which to write; collecting evidence and data; planning and drafting; revising; editing; and designing or presenting a message so that it is successfully understood by a specified audience.
- Write coherent and unified texts, including effective introductions, clear thesis statements, supporting details, transitions, and strong conclusions.
- Use various methods of invention, organization, and style to adapt written and oral forms of communication to a specific rhetorical situation.
- Utilize the library and electronic resources to locate relevant information, assess its reliability and usefulness, and effectively and ethically incorporate it into their own writing by following an appropriate style of documentation.
- Write in a correct, clear, and graceful prose style.
- Effectively evaluate and comment on the writing of others to facilitate revision.
- Analyze rhetorical aspects of audience, purpose, and context to communicate technical information effectively in written, oral, and visual media.
- Recognize structures or genres typically used in science and engineering, understand the processes that produce them, and the organizational and stylistic conventions characteristic of them, and apply this knowledge to their own writing tasks.

or

M COM 320 : Communication in Organizational Settings. (3:3:1)
OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: GE First-Year Writing requirement. To be taken before senior year. Not for freshmen.
DESCRIPTION: Developing written and oral communications for professional organizations, including composing and designing employment communications. Incorporates oral presentations.
NOTE: Fulfills GE Advanced Written and Oral Communication requirement.

Course Outcomes
- Compose various commonly occurring business texts, achieving effectiveness in design, organization, content, and style.
- Demonstrate knowledge of generally accepted grammar standards (from Writing & Speaking for Business).
- Give effective oral presentations with appropriate visual support, achieving effectiveness in message, media, and messenger.
- Create effective business graphics and implement effective visual-design principles.

: Honors Communication in Organizational Settings.

Course Outcomes

IAS 220 : Introduction to Development Studies. (3:3:0)
WHEN TAUGHT: Fall
DESCRIPTION: Exploration of international development in non-formal education, micro-enterprises, community organizations; hunger, poverty, and other special problems in developing areas of the world.

Course Outcomes
- Upon successfully completing this course, a student will be able to recognize the historical origins of international development and the various agendas that it embodies. Upon successfully completing this course, a student will be able to recognize and articulate the complexity of international development issues and their interdisciplinary nature. Upon successfully completing this course, a student will be able to identify major theories and approaches to international development both in general and across different key disciplines. Upon successfully completing this course, a student will be intellectually ready to embark on an International Development Minor Internship.

MATH 119 : Introduction to Calculus. (4:4:1)
OFFERED: Independent Study only.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 110 and Math 111; or equivalent.
DESCRIPTION: Introduction to plane analytic geometry and calculus.

Course Outcomes
- This course is designed to provide beginning undergraduate students a first exposure to Calculus concepts, theorems, and techniques. In general, theorems will not be proved. An understanding of the theorems and their applications to solve calculus problems will be taught. Students will be expected to develop effective problem solving skills based on their understanding of the theory and not just memorize a set of routines to solve problems. For a more detailed course description, visit the Math 119 Wiki page.

MFG 479 : Innovation and Entrepreneurship. (3:3:0)
WHEN TAUGHT: Fall
DESCRIPTION: Develop ideas into a business model. Learn product development. Entrepreneurial concepts and

practices. Strategic planning and global competitiveness.

Course Outcomes
- Participate effectively on an entrepreneurial founding team
- Evaluate business ideas, opportunities, and plans
- Plan a new business financially
- Understand and apply entrepreneurial terminology to the entrepreneurial and investment ecosystems
- Formulate strategies to overcome common start-up business challenges
- Prepare effectively a written business plan
- Make an effective oral business plan presentation

NDFS 200 : Nutrient Metabolism. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: NDFS 100; Organic chemistry or concurrent enrollment.

DESCRIPTION: Chemical structures of nutrients, their food sources, requirements, digestion, absorption, transport, metabolism, functions, storage and excretion; metabolic consequences of nutrient deficiencies, interactions, imbalances, and toxicities.

Course Outcomes
- Identify chemical structures of amino acids, lipids, carbohydrates, and vitamins.
- List functions, food sources, and consequences of deficiencies and toxicities for each of the essential nutrients.
- Explain the metabolic and physiological basis for the consequences of dietary practices that affect nutrient levels, and relate the consequences to the roles of essential nutrients in metabolic processes.
- Analyze diets and alter food intake to reach predetermined targets for consumption of specific dietary components or to achieve an overall dietary pattern.
- Find answers to questions and summarize results from original research reported in published peer-reviewed scientific journals.

NDFS 450 : Food Chemistry. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: NDFS 250 & NDFS 251 & CHEM 285; or NDFS 250 & NDFS 251 & CHEM 352

DESCRIPTION: Structure and properties of food components, including water, carbohydrates, protein, lipids, other nutrients, and food additives. Chemistry of changes occurring during processing, storage, and utilization.

Course Outcomes
- Explain the chemistry of food components, including their properties and reactions
- Explain the major chemical reactions that occur during food processing and storage, including those that limit food shelf life
- Solve real-world problems related to food chemistry
- Write a research proposal on a food chemistry topic. Include objectives, literature review, experimental design and references

NDFS 464 : Food Sensory Evaluation. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 121 & NDFS 250 & NDFS 251; This class should be taken concurrently with NDFS 465.

DESCRIPTION: Analytical and affective methods of assessing sensory properties of food using statistical methods. Laboratory experience in sensory research and techniques. Integrative capstone course.

Course Outcomes
- Use the computer to prepare and deliver questions to panelist.
- Use a computer to collect data from consumer panelists doing affective tests
- Use statistical packages such as SAS to do statistical analysis such as one and two way ANOVA and to make inferences from actual sensory data
- Create and use a spread sheet to display and analyze data, make calculations and do statistical analysis
- Use a computer to write reports.
- Generate a hypothesis, test it using a consumer or discrimination panel, and prepare a report for a client on the findings.
- Use binomial statistics to draw conclusions on categorical data
- Collect data, analyze it using ANOVA, make inferences from the F values and p>F values on the ANOVA result
- Determine your threshold for four basic tastes
- Describe sensory biases and how to best deal with them
- Plan, conduct and report on a discrimination test and use binomial statistics to make inferences
- Demonstrate understanding of preference and ranking tests and use of binomial statistics to make inferences
- Show how to determine when Quantitative Descriptive panelists are trained and when they need more training
- Lead and participate in groups in developing hypotheses, planning and conducting experimentation to test that hypothesis

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 105 or equivalent.

RECOMMENDED: Concurrent enrollment in Phscs 108.

DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes

There are no course outcomes available

PWS 100 : Living with Plants. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Introduction to principles of plant function and diversity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

- Demonstrate a fundamental knowledge of basic principles and concepts of plant biology (i.e., structure, function, and diversity)
- Cultivate an appreciation for the central importance of plants in the way our world and human society functions
- Provide a conceptual framework of how plants influence the environment
- Practice using the scientific method to better understand plant-environment interactions
- Improve verbal and written communication

STDEV 317 : Career Strategies for Employment and Internships. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Preparing for employment and internship opportunities. Practical strategies to facilitate internship and/or career preparation: resumes, cover letters, networking, interviewing, and Internet research.

Course Outcomes

There are no course outcomes available

TECH 201 : History of Creativity and Innovation in the Arts, Science, and Technology 1. (3:3:0)

WHEN TAUGHT: Fall; Spring

DESCRIPTION: Western civilization from Egyptian antiquity to Renaissance from perspective of changes in civilization enabled by technology. Creativity throughout history. How to improve personal creativity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

There are no course outcomes available

TECH 202 : History of Creativity and Innovation in the Arts, Science, and Technology 2. (3:3:0)

WHEN TAUGHT: Winter; Summer

DESCRIPTION: Western civilization from Renaissance to present from perspective of changes in civilization enabled by technology. Creativity throughout history. How to improve personal creativity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

There are no course outcomes available

TMA 150 : Public Speaking. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Principles and methods of public speaking; speaking experiences.

Course Outcomes

- Develop analytical listening and observation skills.
- Know how to speak publicly so your audience will really listen and understand.
- Construct and deliver effective extemporaneous public speeches.
- Manage speech anxiety and effective use nonverbal communication to inform, persuade, enlighten, and impact your audience.
- Be able to produce and employ effective visual aids in your presentations.

*Hours include courses that may fulfill university core requirements.

Hide All Course Descriptions

This degree provides excellent preparation for those individuals in preprofessional programs (e.g., premedicine, predentistry, prelaw) or for an advanced degree (MS, PhD) in nutrition or biological sciences.

Program Requirements | View MAP | View Program Outcomes

1. Complete the following core requirements:

NDFS 100 : Essentials of Human Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Food-oriented study of nutritional facts and principles as a basis for dietary choices; consequences of choices; scientifically examining controversial topics.

Course Outcomes

- Apply the scientific method to identify and interpret credible nutrition information.
- Identify, interpret, and apply nutrition information.
- Identify functions of nutrients and their major food sources.

NDFS 200 : Nutrient Metabolism. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: NDFS 100; Organic chemistry or concurrent enrollment.

DESCRIPTION: Chemical structures of nutrients, their food sources, requirements, digestion, absorption, transport, metabolism, functions, storage and excretion; metabolic consequences of nutrient deficiencies, interactions, imbalances, and toxicities.

Course Outcomes

- Identify chemical structures of amino acids, lipids, carbohydrates, and vitamins.
- List functions, food sources, and consequences of deficiencies and toxicities for each of the essential nutrients.
- Explain the metabolic and physiological basis for the consequences of dietary practices that affect nutrient levels, and relate the consequences to the roles of essential nutrients in metabolic processes.
- Analyze diets and alter food intake to reach predetermined targets for consumption of specific dietary components or to achieve an overall dietary pattern.
- Find answers to questions and summarize results from original research reported in published peer-reviewed scientific journals.

NDFS 294 : Nutrition Research Fundamentals. (1:1:0)

WHEN TAUGHT: Fall

PREREQUISITE: NDFS 200

DESCRIPTION: Design of protocols for and ethics of research with human subjects and animals. Scientific literature searches and presentations.

NOTE: Recommended during sophomore year.

Course Outcomes

- Design a nutrition research experiment using metholdology employed by NDFS faculty and/or that found in peer reviewed nutritional research papers.
- Pass the Institutional Review Board (IRB) research test and implement standards of the Institutional Animal Care and Use Committee (IACUC) into a research study design

NDFS 305 : Nutritional Implications of Disease. (4:4:0)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 200 & PDBIO 305

DESCRIPTION: Nutritional assessment and medical nutrition therapy across disease states.

NOTE: For nutritional science majors.

Course Outcomes

- Know the basic techniques and parameters used in nutritional assessment
- Identify the consequences of malnutrition and the inflammatory response as they relate to disease progression, disease treatment, cost, and quality of life

- Identify the pathophysiology, risk factors, nutritional assessment, and appropriate nutritional intervention of the following diseases: obesity, heart disease, pressure sores, cancer, diabetes, GI disorders, pulmonary diseases, kidney diseases, dialysis, osteoporosis, and nutritional anemias
- Identify the metabolic differences between starvation and metabolic stress including causes, consequences, and nutritional intervention
- Identify the basic principles of nutritional support including supplementation, tube feedings, and intravenous feedings
- Identify the major nutritional concerns in geriatric populations
- Identify the concept of evidence based practice and know how to find and interpret evidence based practice statements on the role of nutrition in the prevention and treatment of various conditions

NDFS 400 : Community Nutrition. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: NDFS 200; or NDFS 201

DESCRIPTION: Public health nutrition applied to community programs.

Course Outcomes

- 1. Describe various community nutrition programs, health care delivery systems, and policies aimed to enhance the nutritional status and overall health of individuals in the US population.
- 2. Effectively write a grant proposal that encompasses the basic elements of implementing community nutrition programs, including a needs assessment, program planning, implementation and evaluation, and budget preparation, and conduct the proposed project in a real-life community setting.
- 3. Exhibit competent communication skills in both written and oral communication for lay and professional audiences in the performance of course assignments.
- 4. Evaluate accuracy of professional and lay resources for nutrition-related complementary and alternative medicine (CAM) products.
- 5. Demonstrate knowledge of the impact of culture and socioeconomic status on consumers' food and nutrition behaviors.
- 6. Demonstrate knowledge of ethical principles in community nutrition research and practice.

NDFS 424 : Nutrition Through the Life Cycle. (2:2:0)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 300; or NDFS 305

DESCRIPTION: Nutritional requirements, diet, and health concerns for pregnancy and lactation; infants; toddlers and preschoolers; school-age children; adolescents; and older adults.

Course Outcomes

- 1. Demonstrate knowledge of evidence-based nutrient requirements (including the rationale for specific requirements throughout the life cycle) and nutritional status assessment methods used to determine diet adequacy among pregnant and lactating women; infants; children; adolescents; and older adults.
- 2. Assess the nutritional status of a pregnant woman and provide appropriate recommendations for dietary improvement based on nutrient requirements during this life stage.
- 3. Assess the nutritional status of a young child and provide appropriate recommendations for dietary improvement based on nutrient requirements during this life stage.
- 4. Effectively write a scientific review paper based on searching, evaluating, and synthesizing previously published peer-reviewed research.
- 5. Evaluate and offer constructive feedback of peers' written works in a manner consistent with the "real-world" professional scientific article review process.

NDFS 435 : Nutritional Biochemistry. (4:4:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 200 & PDBIO 305 & CHEM 285; or NDFS 200 & PDBIO 305 & CHEM 481

DESCRIPTION: Metabolic interrelationships among nutrients.

Course Outcomes

- Demonstrate ability to search, interpret, and summarize original scientific information in an efficiently written scientific paper.
- Demonstrate knowledge of nutrient chemical structures, food sources, digestion, absorption, transport, metabolism and functions, and the metabolic consequences of nutrient deficiencies, interactions, imbalances and toxicities.
- Demonstrate knowledge of appropriate design for scientific experiments.
- Understand the biochemical functions and pathways of nutrients in the body.
- Identify physiological, biochemical and metabolic changes associated with deficient nutrient intake, excessive nutrient intake and selected metabolic diseases.

2. After consulting with a faculty advisor, complete 8 hours from the following:

MMBIO 241 : Molecular and Cellular Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBio 240 or concurrent enrollment.

DESCRIPTION: Molecular and cellular biology techniques laboratory.

Course Outcomes

- Practice ethics and integrity by working with groups and following lab rules.*Relates to Program Learning Outcome: A commitment to professional integrity and ethical behavior consistent with themission of the university.
- Learn the basics of experimental design, how to formulate a hypothesis, what controls to use, how to interpret experimental data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Practice scientific communication through written lab questions, exams and oral presentations.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Learn molecular biology laboratory techniques through practical laboratory exercises. Techniques include, spectrophotometry,isolation of DNA and protein, quantification of DNA and protein, techniques

used to purify or detect specific proteins, such aschromatography, western blot and ELISA, DNA fingerprinting, polymerase chain reaction and enzyme assays.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology.

NDFS 201 : Society, Nutrition, and Chronic Disease. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 100

DESCRIPTION: Behavioral, dietary, and environmental factors that influence nutrition and risks for chronic disease.

Course Outcomes

- Explain or describe how behavioral, dietary, and environmental factors influence nutrition and chronic disease risks.
- Find scientific research articles and identify their key characteristics. Identify consistencies or inconsistencies in studies of diet and chronic disease risks.
- Apply information about behavioral, dietary, and environmental factors to reduce chronic disease risks.

NDFS 250 : Essentials of Food Science. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 101; or CHEM 105; or SFL 110; concurrent enrollment in NDFS 251

DESCRIPTION: Overview of food science, including chemical, physical and microbiological principles related to food processing, storage, and utilization. Current issues in food science.

NOTE: This class should be taken concurrently with NDFS 251.

Course Outcomes

- Explain the basic concepts and principles of Food Science
- Recognize (distinguish) current topics in the news and in lay literature as being related to Food Science and Technology
- Evaluate the scientific validity of various consumer concerns regarding food production, distribution, preservation, storage and utilization
- Obtain further information on Food Science topics through library research of the scientific literature
- Explain how Food Science knowledge applies to your major field of study, and make the connection between what you're learning and what you plan to do after graduation
- Solve Food Science related problems.
- Determine if you more fully enjoy eating, understanding what happens to food between farm gate and dinner plate

NDFS 251 : Essentials of Food Science Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 101; or CHEM 105; or SFL 110; Concurrent enrollment in NDFS 250.

DESCRIPTION: Laboratory experience in the chemistry of changes occurring during food processing, storage, and utilization.

NOTE: This class should be taken concurrently with NDFS 250.

Course Outcomes

- Understand the basic chemistry involved in ripening, processing, and storing food*Relates to Program Learning Outcome: Demonstrate an understanding of the chemical changes occurring during food processing and storage, including reactions involving carbohydrates, protein and fats
- Develop the ability to work in teams to carry out laboratory experiments
- Understand key elements of food required for proper preservation and safety*Relates to Program Learning Outcome: Demonstrate an understanding of the role of microorganisms in food processing, food preservation, and food safety with respect to pathogens, spoilage, and fermentative microorganisms, and apply the basic elements of sanitation and quality assurance programs to understand and control microbial effects in food

NDFS 310 : Nutrition and Metabolism in Sports and Exercise. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: NDFS 100 & PDBIO 305

DESCRIPTION: Scientific basis for the role of nutrition in human performance. Critical evaluation of popular practices; making optimal food choices for physical activity.

NOTE: This course was formerly named Sports Nutrition.

Course Outcomes

- Students will apply their current understanding of nutrition to aspects of physical performance. Describe the factors (exercise intensity, duration, substrate availability and endocrine) that affect energy utilization.
- Search, interpret, and summarize original scientific information. Evaluate nutritional claims for scientific accuracy.
- Apply evidence-based nutrition recommendations for sports and exercise in real or hypthetical situations.

NDFS 380 : International Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 100

DESCRIPTION: Causes and consequences of nutrient deficiencies common in developing countries. Appropriate interventions to prevent or treat malnutrition.

Course Outcomes
- Relate critical nutrient requirements deficiencies to nutritional diseases and poor cognitive devolopment
- Understand the breadth of undernutrition, poverty and hunger that plague the developing world.
- Understand the scientific literature that relates to nutional problems in devloping societies
- Relate the nutritional status of undernourished children to their diets and suggest plausible solutions

NDFS 494R : Undergraduate Research in Nutrition, Dietetics, or Food Science. (1-3:0:9)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Instructor's consent.

DESCRIPTION: Mentored research experience.

Course Outcomes
- Students will develop skillsets in data collection, data entry, and/or data analysis methods.
- Students will develop an increased understanding of the most up-to-date findings in the areas we are researching in the lab.
- To coordinate our research efforts in the lab
- Students will gain experience presenting research to the group and will increase their critical thinking skills discussing original research articles.

(up to 3 hours)

PDBIO 360 : Cell Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Fundamentals of cell structure and function with reference to analytical methods used by cell biologists. Practice in designing, executing, and interpreting relative experiments.

Course Outcomes
- Students will demonstrate knowledge of the molecular architecture of the nucleus, including the nuclear envelope, nucleoplasm and nucleolus, chromatin, and the nuclear pore.
- Students will demonstrate an understanding of protein transport, including nuclear import and export and vesicular transport through the secretory and sorting pathways.
- Students will demonstrate knowledge of the molecular and cellular structure and dynamics of cytoskeletal systems.
- Students will be able to apply the basic cell biological principles in outcomes 1-3 to more complicated cellular processes, including cell adhesion, cell migration, cell polarity, cell division, cancer, and development.
- Students will demonstrate the ability to generate hypothesis about how cell biological systems work at the molecular level and design experiments that test that hypothesis.
- Students will demonstrate competence in interpreting original raw data from cell biology experiments, including microscopy, protein biochemistry, molecular biology, and genetics strategies
- Students will demonstrate the ability to critically evaluate primary cell biology literature, including the ability to evaluate the design and interpretation of experimental data.

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes
- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

3. Complete the following:

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes
- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better

understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

Course Outcomes

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

Course Outcomes

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes

- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

Course Outcomes

- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 352 or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.

NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes

- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

(1 hour required)

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes

- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.

DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes

There are no course outcomes available

PDBIO 305 : Human Physiology (with lab). (4:4:2)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

RECOMMENDED: A general biology course.

DESCRIPTION: Function of body organ systems.

NOTE: Not acceptable for physiology and developmental biology, biophysics, or neuroscience majors. Designed for students with basic chemistry / no molecular biology. Students with chemistry/molecular biology should take PDBio 362.

Course Outcomes

- Students will demonstrate the proper use of physiology terminology.
- Student will demonstrate a well-integrated and comprehensive understanding of the human body in health and disease.
- Students will use knowledge of cells and organ systems to solve problems related to the function of the human body.
- Students will demonstrate the necessary knowledge and skills in physiology that are required for their majors and future aspirations for graduate and professional school.
- Students will develop and demonstrate in their daily lives a deeper appreciation and respect for the human body.
- Students will demonstrate the knowledge to make informed personal (medical,ethical,and political)decisions regarding physiological concepts.

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: High school algebra and trigonometry.
RECOMMENDED: Concurrent enrollment in Phscs 107.
DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes
There are no course outcomes available

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: MATH 110 or equivalent.
DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes
- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

Recommended Courses

CHEM 223 : Quantitative and Qualitative Analysis. (4:2:6)

WHEN TAUGHT: Fall; Spring
PREREQUISITE: CHEM 107; or CHEM 113
DESCRIPTION: Principles of chemical equilibrium, quantitative chemical measurements, and qualitative detection of selected chemical species.
NOTE: Primarily for majors in molecular biology and the life sciences.

Course Outcomes
- Course Objectives: The course is designed to develop research skills. The labwork will have a somewhat bioanalytical focus, e.g. the chemical analysis of biological molecules or biologically related ions and the use of biomolecules in assays. We will work to develop good laboratory practice, both conceptually and practically, and consider how to do good science. The combined lecture/lab approach will be used to help you understand quantitative approaches to analysis, sources of error, and the utility but also limitations of laboratory measurements. You will be asked to apply a portion of this knowledge to your own laboratory determinations. We will also discuss more advanced analytical methods involving chemical separations and instrumental analyses. This course fills one of the requirements for a minor in chemistry.

HLTH 345 : Principles of Epidemiology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
RECOMMENDED: Stat 121.
DESCRIPTION: Applying analytical tools to study acute and chronic disease to facilitate investigation and control of epidemics.

Course Outcomes
- Investigate disease outbreaks.
- Describe basic concepts, definitions, and history of Epidemiology.
- Describe patterns of disease occurrence.
- Interpret Epidemiologic studies.
- Evaluate treatment effectiveness.
- Measure disease frequency and association.
- Distinguish between statistical association and cause-effect relationships.
- Know basic design strategies in Epidemiology.

MMBIO 221 : General Microbiology. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Any biology course.
RECOMMENDED: Any chemistry course.
DESCRIPTION: Microbial world, emphasizing communicable diseases, their causes and control.
NOTE: Recommended for students seeking a liberal education in microbiology who do not have the prerequisites to take the more advanced courses.

Course Outcomes

- Explain and discuss the ways by which microbiologists study microorganisms.
- Discuss the principle infectious diseases that affect mankind, including how they are transmitted, treated, controlled and prevented.
- Differentiate between the types of microorganisms by identifying relevant structure and their function in the biosphere.
- Propose microbial solutions to global problems.
- Describe how the human body defends itself against infectious agents.

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 105 or equivalent.

RECOMMENDED: Concurrent enrollment in Phscs 108.

DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes

There are no course outcomes available

PHSCS 107 : General Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 105 or concurrent enrollment.

DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

Course Outcomes

- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 106 or concurrent enrollment

DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

Course Outcomes

- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

Note: Professional schools and graduate programs may require additional courses not required for the major, such as Phscs 106, 107, 108, or Math 119 or 112. Students should contact the program to which they may apply to determine the specific courses required.

*Hours include courses that may fulfill university core requirements.

Many of these courses have prerequisites. Most students choosing this minor will have completed the prerequisites as part of their major. Other students will need to complete them.

Program Requirements | View MAP

1. Complete the following:

NDFS 100 : Essentials of Human Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Food-oriented study of nutritional facts and principles as a basis for dietary choices; consequences of choices; scientifically examining controversial topics.

Course Outcomes

- Apply the scientific method to identify and interpret credible nutrition information.
- Identify, interpret, and apply nutrition information.
- Identify functions of nutrients and their major food sources.

NDFS 200 : Nutrient Metabolism. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: NDFS 100; Organic chemistry or concurrent enrollment.

DESCRIPTION: Chemical structures of nutrients, their food sources, requirements, digestion, absorption, transport, metabolism, functions, storage and excretion; metabolic consequences of nutrient deficiencies, interactions, imbalances, and toxicities.

Course Outcomes

- Identify chemical structures of amino acids, lipids, carbohydrates, and vitamins.
- List functions, food sources, and consequences of deficiencies and toxicities for each of the essential nutrients.
- Explain the metabolic and physiological basis for the consequences of dietary practices that affect nutrient levels, and relate the consequences to the roles of essential nutrients in metabolic processes.
- Analyze diets and alter food intake to reach predetermined targets for consumption of specific dietary components or to achieve an overall dietary pattern.
- Find answers to questions and summarize results from original research reported in published peer-reviewed scientific journals.

2. After consulting with a faculty advisor, complete 10 hours from the following:

NDFS 201 : Society, Nutrition, and Chronic Disease. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 100

DESCRIPTION: Behavioral, dietary, and environmental factors that influence nutrition and risks for chronic disease.

Course Outcomes

- Explain or describe how behavioral, dietary, and environmental factors influence nutrition and chronic disease risks.
- Find scientific research articles and identify their key characteristics. Identify consistencies or inconsistencies in studies of diet and chronic disease risks.
- Apply information about behavioral, dietary, and environmental factors to reduce chronic disease risks.

NDFS 305 : Nutritional Implications of Disease. (4:4:0)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 200 & PDBIO 305

DESCRIPTION: Nutritional assessment and medical nutrition therapy across disease states.

NOTE: For nutritional science majors.

Course Outcomes

- Know the basic techniques and parameters used in nutritional assessment

Identify the consequences of malnutrition and the inflammatory response as they relate to disease progression, disease treatment, cost, and quality of life
- Identify the pathophysiology, risk factors, nutritional assessment, and appropriate nutritional intervention of the following diseases: obesity, heart disease, pressure sores, cancer, diabetes, GI disorders, pulmonary diseases, kidney diseases, dialysis, osteoporosis, and nutritional anemias
- Identify the metabolic differences between starvation and metabolic stress including causes, consequences, and nutritional intervention
- Identify the basic principles of nutritional support including supplementation, tube feedings, and intravenous feedings
- Identify the major nutritional concerns in geriatric populations
- Identify the concept of evidence based practice and know how to find and interpret evidence based practice statements on the role of nutrition in the prevention and treatment of various conditions

NDFS 310 : Nutrition and Metabolism in Sports and Exercise. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: NDFS 100 & PDBIO 305

DESCRIPTION: Scientific basis for the role of nutrition in human performance. Critical evaluation of popular practices; making optimal food choices for physical activity.

NOTE: This course was formerly named Sports Nutrition.

Course Outcomes
- Students will apply their current understanding of nutrition to aspects of physical performance. Describe the factors (exercise intensity, duration, substrate availability and endocrine) that affect energy utilization.
- Search, interpret, and summarize original scientific information. Evaluate nutritional claims for scientific accuracy.
- Apply evidence-based nutrition recommendations for sports and exercise in real or hypthetical situations.

NDFS 380 : International Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 100

DESCRIPTION: Causes and consequences of nutrient deficiencies common in developing countries. Appropriate interventions to prevent or treat malnutrition.

Course Outcomes
- Relate critical nutrient requirements deficiencies to nutritional diseases and poor cognitive devolopment
- Understand the breadth of undernutrition, poverty and hunger that plague the developing world.
- Understand the scientific literature that relates to nutional problems in devloping societies
- Relate the nutritional status of undernourished children to their diets and suggest plausible solutions

NDFS 400 : Community Nutrition. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: NDFS 200; or NDFS 201

DESCRIPTION: Public health nutrition applied to community programs.

Course Outcomes
- 1. Describe various community nutrition programs, health care delivery systems, and policies aimed to enhance the nutritional status and overall health of individuals in the US population.
- 2. Effectively write a grant proposal that encompasses the basic elements of implementing community nutrition programs, including a needs assessment, program planning, implementation and evaluation, and budget preparation, and conduct the proposed project in a real-life community setting.
- 3. Exhibit competent communication skills in both written and oral communication for lay and professional audiences in the performance of course assignments.
- 4. Evaluate accuracy of professional and lay resources for nutrition-related complementary and alternative medicine (CAM) products.
- 5. Demonstrate knowledge of the impact of culture and socioeconomic status on consumers' food and nutrition behaviors.
- 6. Demonstrate knowledge of ethical principles in community nutrition research and practice.

NDFS 424 : Nutrition Through the Life Cycle. (2:2:0)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 300; or NDFS 305

DESCRIPTION: Nutritional requirements, diet, and health concerns for pregnancy and lactation; infants; toddlers and preschoolers; school-age children; adolescents; and older adults.

Course Outcomes
- 1. Demonstrate knowledge of evidence-based nutrient requirements (including the rationale for specific requirements throughout the life cycle) and nutritional status assessment methods used to determine diet adequacy among pregnant and lactating women; infants; children; adolescents; and older adults.
- 2. Assess the nutritional status of a pregnant woman and provide appropriate recommendations for dietary improvement based on nutrient requirements during this life stage.
- 3. Assess the nutritional status of a young child and provide appropriate recommendations for dietary improvement based on nutrient requirements during this life stage.
- 4. Effectively write a scientific review paper based on searching, evaluating, and synthesizing previously published peer-reviewed research.
- 5. Evaluate and offer constructive feedback of peers' written works in a manner consistent with the "real-world" professional scientific article review process.

NDFS 435 : Nutritional Biochemistry. (4:4:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: NDFS 200 & PDBIO 305 & CHEM 285; or NDFS 200 & PDBIO 305 & CHEM 481
DESCRIPTION: Metabolic interrelationships among nutrients.

Course Outcomes

- Demonstrate ability to search, interpret, and summarize original scientific information in an efficiently written scientific paper.
- Demonstrate knowledge of nutrient chemical structures, food sources, digestion, absorption, transport, metabolism and functions, and the metabolic consequences of nutrient deficiencies, interactions, imbalances and toxicities.
- Demonstrate knowledge of appropriate design for scientific experiments.
- Understand the biochemical functions and pathways of nutrients in the body.
- Identify physiological, biochemical and metabolic changes associated with deficient nutrient intake, excessive nutrient intake and selected metabolic diseases.

Undergraduate Courses

100-Level Courses

NDFS 100 : Essentials of Human Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Food-oriented study of nutritional facts and principles as a basis for dietary choices; consequences of choices; scientifically examining controversial topics.

Course Outcomes

- Apply the scientific method to identify and interpret credible nutrition information.
- Identify, interpret, and apply nutrition information.
- Identify functions of nutrients and their major food sources.

NDFS 191 : Careers in Food Science. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Guest lectures and exposure to vocations in food science.

Course Outcomes

- This is an introductory course for food science and is designed for undergraduate students who have not selected a major and/or are considering Food Science or Food Industry Management as a possible major.

200-Level Courses

NDFS 200 : Nutrient Metabolism. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: NDFS 100; Organic chemistry or concurrent enrollment.

DESCRIPTION: Chemical structures of nutrients, their food sources, requirements, digestion, absorption, transport, metabolism, functions, storage and excretion; metabolic consequences of nutrient deficiencies, interactions, imbalances, and toxicities.

Course Outcomes

- Identify chemical structures of amino acids, lipids, carbohydrates, and vitamins.
- List functions, food sources, and consequences of deficiencies and toxicities for each of the essential nutrients.
- Explain the metabolic and physiological basis for the consequences of dietary practices that affect nutrient levels, and relate the consequences to the roles of essential nutrients in metabolic processes.
- Analyze diets and alter food intake to reach predetermined targets for consumption of specific dietary components or to achieve an overall dietary pattern.
- Find answers to questions and summarize results from original research reported in published peer-reviewed scientific journals.

NDFS 201 : Society, Nutrition, and Chronic Disease. (2:2:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 100

DESCRIPTION: Behavioral, dietary, and environmental factors that influence nutrition and risks for chronic disease.

Course Outcomes

- Explain or describe how behavioral, dietary, and environmental factors influence nutrition and chronic disease risks.
- Find scientific research articles and identify their key characteristics. Identify consistencies or inconsistencies in studies of diet and chronic disease risks.
- Apply information about behavioral, dietary, and environmental factors to reduce chronic disease risks.

NDFS 250 : Essentials of Food Science. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 101; or CHEM 105; or SFL 110; concurrent enrollment in NDFS 251

DESCRIPTION: Overview of food science, including chemical, physical and microbiological principles related to food processing,

storage, and utilization. Current issues in food science.

NOTE: This class should be taken concurrently with NDFS 251.

Course Outcomes
- Explain the basic concepts and principles of Food Science
- Recognize (distinguish) current topics in the news and in lay literature as being related to Food Science and Technology
- Evaluate the scientific validity of various consumer concerns regarding food production, distribution, preservation, storage and utilization
- Obtain further information on Food Science topics through library research of the scientific literature
- Explain how Food Science knowledge applies to your major field of study, and make the connection between what you're learning and what you plan to do after graduation
- Solve Food Science related problems.
- Determine if you more fully enjoy eating, understanding what happens to food between farm gate and dinner plate

NDFS 251 : Essentials of Food Science Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 101; or CHEM 105; or SFL 110; Concurrent enrollment in NDFS 250.

DESCRIPTION: Laboratory experience in the chemistry of changes occurring during food processing, storage, and utilization.

NOTE: This class should be taken concurrently with NDFS 250.

Course Outcomes
- Understand the basic chemistry involved in ripening, processing, and storing food*Relates to Program Learning Outcome: Demonstrate an understanding of the chemical changes occurring during food processing and storage, including reactions involving carbohydrates, protein and fats
- Develop the ability to work in teams to carry out laboratory experiments
- Understand key elements of food required for proper preservation and safety*Relates to Program Learning Outcome: Demonstrate an understanding of the role of microorganisms in food processing, food preservation, and food safety with respect to pathogens, spoilage, and fermentative microorganisms, and apply the basic elements of sanitation and quality assurance programs to understand and control microbial effects in food

NDFS 290 : Introduction to Dietetics. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: The profession of dietetics; exposure to specialty areas through guest lectures.

Course Outcomes
- Understand how to become a Registered Dietitian Nutritionist, including:Educational requirements and various routes to completion.Requirements for acceptance to the Didactic Program in Dietetics at BYU.Requirements for acceptance to a Dietetic Internship.Requirements for eligibility for Registration by the Commission on Dietetic Registration (CDR)Requirements for maintenance of continuing CDR Registration.
- Understand what a Registered Dietitian Nutritionist is.
- Understand what it means to be a professional.
- Have exposure to a variety of jobs currently held by Registered Dietitian Nutritionists.
- Identify which area of dietetics is personally most appealing
- Identify what future job opportunities are predicted in the profession of dietetics.

NDFS 292R : Fieldwork in Dietetics. (.5-2:Arr:Arr)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Fieldwork for international students.

Course Outcomes
- Students will demonstrate professional attributes such as customer focus, critical thinking, and time management and work prioritization while developing dietetics-related skills within various organizational structures.

NDFS 294 : Nutrition Research Fundamentals. (1:1:0)

WHEN TAUGHT: Fall

PREREQUISITE: NDFS 200

DESCRIPTION: Design of protocols for and ethics of research with human subjects and animals. Scientific literature searches and presentations.

NOTE: Recommended during sophomore year.

Course Outcomes
- Design a nutrition research experiment using metholdology employed by NDFS faculty and/or that found in peer reviewed nutritional research papers.
- Pass the Institutional Review Board (IRB) research test and implement standards of the Institutional Animal Care and Use Committee (IACUC) into a research study design

300-Level Courses

NDFS 300 : Medical Nutrition Therapy 1. (4:4:0)

WHEN TAUGHT: Fall

PREREQUISITE: Dietetics major status.

DESCRIPTION: Nutritional assessment and medical nutrition therapy across disease states.

Course Outcomes
- Develop educational materials for patient teaching and use current nutrition knowledge related to general healthy eating, health promotion, or medical nutrition therapy counseling

- Be familiar with basic counseling and interviewing techniques
- Be familiar with basic counseling and interviewing techniques
- Determine fluid and electrolyte requirements
- Understand and use medical terminology
- Know biochemical markers related to nutrition and how to interpret them
- Gather, analyze and interpret the nutrient composition of foods/menus
- Develop appropriate disease specific diets
- Be familiar with common alternative nutritional therapies and become familiar with resources on herbal remedies
- Understand the dietary supplement act
- Demonstrate counseling techniques to facilitate behavior change
- Assessment and treatment of nutritional health risks
- Identify the appropriate medical nutrition therapy for specific disease states and provide the appropriate intervention, including calculating and defining diets
- Interpret, evaluate and use professional literature to make ethical evidence-based practice decisions
- Use the nutrition care process to make decisions, to identify nutrition-related problems and determine and evaluate nutrition interventions, including MNT, disease prevention and health promotion
- Modify and evaluate menus for diverse groups
- Demonstrate understanding of pharmacology, nutrient metabolism, physiology, genetics and biochemistry

NDFS 305 : Nutritional Implications of Disease. (4:4:0)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 200 & PDBIO 305

DESCRIPTION: Nutritional assessment and medical nutrition therapy across disease states.

NOTE: For nutritional science majors.

Course Outcomes

- Know the basic techniques and parameters used in nutritional assessment
- Identify the consequences of malnutrition and the inflammatory response as they relate to disease progression, disease treatment, cost, and quality of life
- Identify the pathophysiology, risk factors, nutritional assessment, and appropriate nutritional intervention of the following diseases: obesity, heart disease, pressure sores, cancer, diabetes, GI disorders, pulmonary diseases, kidney diseases, dialysis, osteoporosis, and nutritional anemias
- Identify the metabolic differences between starvation and metabolic stress including causes, consequences, and nutritional intervention
- Identify the basic principles of nutritional support including supplementation, tube feedings, and intravenous feedings
- Identify the major nutritional concerns in geriatric populations
- Identify the concept of evidence based practice and know how to find and interpret evidence based practice statements on the role of nutrition in the prevention and treatment of various conditions

NDFS 310 : Nutrition and Metabolism in Sports and Exercise. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: NDFS 100 & PDBIO 305

DESCRIPTION: Scientific basis for the role of nutrition in human performance. Critical evaluation of popular practices; making optimal food choices for physical activity.

NOTE: This course was formerly named Sports Nutrition.

Course Outcomes

- Students will apply their current understanding of nutrition to aspects of physical performance. Describe the factors (exercise intensity, duration, substrate availability and endocrine) that affect energy utilization.
- Search, interpret, and summarize original scientific information. Evaluate nutritional claims for scientific accuracy.
- Apply evidence-based nutrition recommendations for sports and exercise in real or hypthetical situations.

NDFS 330 : Comparative Animal Nutrition. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Comparative digestion, absorption, and utilization of nutrients and nutritional applications of domestic, pet, and wildlife species.

Course Outcomes

- Demonstrate an understanding of the diverse digestive systems in the animal kingdom.
- Demonstrate an understanding how changes in digestive systems affect both nutrient requirements and affect feeding types and systems.
- Apply the roles of nutrients in cellular metabolism.
- Explain how nutrient deficiencies affect body function and performance.
- Demonstrate knowledge of animal feed formulation.

NDFS 350 : Food Analysis. (4:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 250 & NDFS 251 & CHEM 285; or NDFS 250 & NDFS 251 & CHEM 352

DESCRIPTION: Principles, methods and techniques of qualitative and quantitative physical, chemical, and biological analysis of food and food ingredients.

Course Outcomes

- Explain the principles behind the analytical techniques used in food analysis (primarily chemical and physical analyses)
- Measure various components of food (found on the Nutrition Facts label) using laboratory techniques common to food chemistry and food analysis
- Select the appropriate analytical technique when presented with a practical problem
- Prepare a written report and brief oral presentation covering the quality assurance tests required for the

analysis of raw ingredients, intermediate products and final product of a food commodity having a standard of identity.

NDFS 355 : Food Process Engineering. (4:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: PHSCS 105 & MATH 112; or PHSCS 105 & MATH 119; Food Science majors only.

DESCRIPTION: Mass and energy balances, thermodynamics, fluid flow, heat and mass transfer; unit operations in food processing, including thermal processing, frying, irradiation, refrigeration, freezing, and dehydration.

Course Outcomes

- Solve fluid flow problems to determine velocities, flow volumes, friction losses. Size pipes and select appropriate pump types and select appropriate sizes.
- Compare the effectiveness and amount of heat exchanged in tubular and plate heat exchangers
- Calculate the amount of heat recovered in the regeneration section of a HTST pasteurizer
- Determine effect of flow rate on conductivity of heat exchange partition in a tubular and plate heat exchanger
- Determine the coefficient of performance for Freon and ammonia refrigeration cycles and make a judgment as to which is appropriate for a hypothetical application
- Calculate the amount of steam needed to achieve a hypothetical heating operation
- •Describe the flow of a HTST pasteurizer
- Given an required Fo, be able to do a heat penetration test on a low acid food and determine the process time needed to achieve the required kill
- Be able to concentrate a fluid product on a RO system or separate proteins from salts and sugars on a UF system. Explain the drop in flux rates with time, module design, and construction and care of membranes
- Diagram the operations in a spray drying system and explain what suppresses the product temperature during drying
- Describe the four systems needed and the role each plays in a freeze drying system
- Explain the function and operation of a flow diversion valve.
- Describe the balance of lethal temperature, time, bacterial control and quality on thermally processed products
- Compare the process flow, processing conditions, products, and advantages and disadvantages of process options for long term preservation: retorts, agitating retorts, UHT, High pressure, freeze drying, air drying, spray drying
- Describe the measures taken to achieve the highest quality in frozen foods
- Know the chemistry and barrier characteristics of the commonly used polymers
- Know the functions of a package and be able to determine what functions the package is performing in an array of packaging examples
- Know the environmental implications of each of a wide variety of commonly used packaging materials

NDFS 356 : Medical Nutrition Therapy 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 300

DESCRIPTION: Medical nutrition therapy across disease states; continuation of NDFS 300.

Course Outcomes

- Use oral and written communications in presenting an educational session for a group
- Use current information technologies
- Work effectively as a team member
- Public Speaking
- Media Presentations
- Knowledge of: exercise physiology, pathophysiology related to nutrition care, fluid and electrolyte requirements, pharmacology: nutrient-nutrient interaction.
- Demsonstrated ability to: interpret medical terminology, interpret laboratory parameters related to nutrition
- Document appropriately a variety of activities
- Calculate and interpret nutrient composition of foods
- Knowledge of medical nutrition therapy strategies to assess need for adaptive feeding techniques and equipment
- Calculate and/or define diets for health conditions addressed by health promotion/disease (cancer, pulmonary, liver, pancreas, and kidney)
- Calculate enteral and parenteral nutrition formulations
- Evolving methods of assessing health status
- Assessment and treatment of nutritional health risks
- Identify the appropriate medical nutrition therapy for specific disease states and provide the appropriate intervention, including calculating and defining diets
- Interpret, evaluate and use professional literature to make ethical evidence-based practice decisions
- Use current information technologies to locate and apply evidence based guidelines and protocols; (ADA evidence Analysis Library and the Cochrane Database of Systematic Reviews)
- Use the nutrition care process to make decisions, to identify nutrition-related problems and determine and evaluate nutrition interventions, including MNT, disease prevention and health promotion
- Modify and evaluate menus for diverse groups
- Demonstrate understanding of pharmacology, nutrient metabolism, physiology, genetics and biochemistry

NDFS 361 : Food Microbiology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBIO 221 & MMBIO 222

DESCRIPTION: Pathogenic and spoilage microorganisms in foods and their control. Beneficial microorganisms in food systems. Influence of the food system on growth and survival of microorganisms.

Course Outcomes

- Understand the growth requirements of common food borne pathogens and…Be able to attribute the characteristics of a food borne illness with unknown etiology to the most likely organism. Differentiate which organisms would be likely to grow in a specific food product
- Understand intrinsic and environmental aspects of foods and how they can be modified to affect the growth and metabolism of food borne microorganisms to include spoilage, pathogenic, and beneficial organisms.
- Carry out a series of laboratory experiments aimed at isolating and identifying common food borne microbial pathogens

- Classify spoilage microorganisms according to the food or foods they are most likely to affect based on the intrinsic and environmental characteristics of the food and compare to various storage methods to determine which method would be most appropriate for the given food product
- Design and carry out a laboratory experiment to evaluate the microbial safety of a common food product

NDFS 362 : Food Commodity Processing. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: NDFS 250 & NDFS 251; Food Science majors only.

DESCRIPTION: Characteristics of raw food material; principles of food preservation and food processing techniques; packaging materials and methods; sanitation and water and waste management.

Course Outcomes

- Prepare a flow chart of a plant that produces masa products from corn and point out how raw material and process can be varied to result in different masa products
- Diagram the wheat milling flow and explain the grinding and separation processes that resulted in each stream. Describe the characteristics and uses of different varieties of wheat.
- Prepare a flow chart for a commercial bakery. Include sources and types of ingredients, function of different processes and quality assurance measures
- Analyze the flow of a dry blend soup line and explain how quality blend uniformity and functionality is assured
- Describe the quality assurance checks on milk coming into a dairy plant, diagram the flow and explain the function of each process used to produce each of their products.
- Diagram and critique the Deseret Meat Processing operation from kill to meat cuts to further processed products.
- Diagram and critique a fruit canning operation. Describe the raw material, how it is handled, sorted, graded, how the quality and safety of the canned fruit and the integrity of the can is assured.
- Prepare flow diagrams and explanations for the processes involved in preparing drinking water for a system that uses surface water for its source and for a system that uses deep well and spring water for its source.
- Design and diagram a system that will treat waste water from Provo City so that it is fit to release into Utah Lake. Demonstrate understanding of the function of each unit operation. Include control measures to assure quality

NDFS 374 : Food Production Management. (2:2:0)

WHEN TAUGHT: Fall

PREREQUISITE: Dietetics major status.

DESCRIPTION: Managing processes and techniques of quantity food production in commercial and institutional food systems.

Course Outcomes

- 1. Explain the foodservice industry in the context of a system and describe food consumption issues and trends for various consumers.
- 2. Be able to identify different paths of food product flow and understand the advantages and disadvantages of these operations.
- 3. Demonstrate knowledge of principles of menu planning through creating an appropriate menu for institutional feeding to meet needs of target population.
- 4. Understand the importance of aesthetically pleasing therapeutic menus and apply knowledge to meet individual or group dietary needs.
- 5. Discuss need for standardized recipes and appropriately quantify recipes for volume food production.
- 6. Be able to identify quantity food production techniques, terminology, and equipment used for: soups, sauces, meat, poultry, fish, egg and dairy foods, vegetables, fruits, salads, sandwiches, and baked goods
- 7. Be able to appropriately use basic principles of food and labor costs for financial accountability
- 8. Accurately quantify recipes and calculate recipe costs.
- 9. Students are able to use current information technologies to demonstrate an effective and professional oral presentation for the class
- 10. Students are able to apply the principles of sanitation and safety to foodservice, and recognize the impact on consumers

NDFS 375 : Food Production Management Laboratory. (2:0:8)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 374 or concurrent enrollment.

Course Outcomes

- 2. Use appropriate controls in quantity food production.
- 1. Apply appropriate quantity food preparation techniques and Food Science knowledge for soups, sauces, meat, poultry, fish, dairy foods, vegetables, fruits, salads, sandwiches, and baked goods
- 3. Demonstrate use of appropriate safety and sanitation principles during food production and service to the customer.
- 4. Demonstrate safe and appropriate use of and cleaning of foodservice equipment.
- 5. Demonstrate effective presentation and service of food.
- 6. Students will work effectively as a team member as evidenced through good communication, appropriate assertiveness, and effective time management skills.
- 7. Use various monitoring tools to provide data for continuous quality improvement.
- 8. Demonstrate production management skills ensuring that foodservice operation meets the needs of the clients.

NDFS 380 : International Nutrition. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 100

DESCRIPTION: Causes and consequences of nutrient deficiencies common in developing countries. Appropriate interventions to prevent or treat malnutrition.

Course Outcomes

- Relate critical nutrient requirements deficiencies to nutritional diseases and poor cognitive devolopment
- Understand the breadth of undernutrition, poverty and hunger that plague the developing world.

- Understand the scientific literature that relates to nutional problems in devloping societies
- Relate the nutritional status of undernourished children to their diets and suggest plausible solutions

NDFS 390R : Special Topics in Food Science and Nutrition. (1-3:ARR:0)

DESCRIPTION: Topics vary.

Course Outcomes
- Observe and evaluate food and nutriton practices in an international setting.

NDFS 399R : Academic Internship. (1-9:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Instructor's consent.

DESCRIPTION: Off-campus work experience sponsored by industrial, government, or academic institutions.

Course Outcomes
- Gain practical experience in food science and related areas.
- Apply classroom knowledge to practical situations through observation and involvement in different levels of the organization.
- Develop confidence in personal judgment and gain maturity and self-confidence.
- Gain exposure to a company or agency and a specific area of employment to determine whether they want that area for their life's work; evaluate the company for permanent employment.

400-Level Courses

NDFS 400 : Community Nutrition. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: NDFS 200; or NDFS 201

DESCRIPTION: Public health nutrition applied to community programs.

Course Outcomes
- 1. Describe various community nutrition programs, health care delivery systems, and policies aimed to enhance the nutritional status and overall health of individuals in the US population.
- 2. Effectively write a grant proposal that encompasses the basic elements of implementing community nutrition programs, including a needs assessment, program planning, implementation and evaluation, and budget preparation, and conduct the proposed project in a real-life community setting.
- 3. Exhibit competent communication skills in both written and oral communication for lay and professional audiences in the performance of course assignments.
- 4. Evaluate accuracy of professional and lay resources for nutrition-related complementary and alternative medicine (CAM) products.
- 5. Demonstrate knowledge of the impact of culture and socioeconomic status on consumers' food and nutrition behaviors.
- 6. Demonstrate knowledge of ethical principles in community nutrition research and practice.

NDFS 401 : Community Nutrition Fieldwork. (.5:0:1.5)

WHEN TAUGHT: Fall

PREREQUISITE: Dietetics major status; concurrent enrollment in NDFS 400.

DESCRIPTION: Fieldwork experience in public health and community nutrition programs.

NOTE: Flu vaccine and immunization record is required. Fee may be involved.

Course Outcomes
There are no course outcomes available

NDFS 405 : Nutrition Assessment Lab. (.5:0:3)

PREREQUISITE: NDFS 356

DESCRIPTION: Developing skill in anthropometric, biochemical, clinical, and dietary parameters of nutritional assessment.

Course Outcomes
- Demonstrate the ability to locate, interpret, evaluate and use professional literature in the process of nutritional assessment.
- Accurately perform and interpret assessment procedures (the first step in the nutrition care process) to identify nutrition-related problems.
- Acreditation Council for Education in Nutrition and Dietetics Core Knowledge for the RDCore KnowledgeBy the conclusion of the course, students will:Measured/Met by:KRD 1.1Demonstrate the ability to locate, interpret, evaluate and use professional literature in the process of nutritional assessmentCompetency Sign-off, Blood Pressure Certification, Lab WorksheetsKRD 3.1Accurately perform and interpret assessment procedures (the first step in the nutrition care process) to identify nutrition-related problemsCompetency Sign-off, Lab WorksheetsKRD 4.2Apply safety principles in laboratory procedures regarding blood-borne pathogens and the disposal of biohazardous wasteQuiz2012 standards
- Apply safety principles in laboratory procedures regarding blood-borne pathogens and the disposal of biohazardous waste.

NDFS 424 : Nutrition Through the Life Cycle. (2:2:0)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 300; or NDFS 305

DESCRIPTION: Nutritional requirements, diet, and health concerns for pregnancy and lactation; infants; toddlers and preschoolers; school-age children; adolescents; and older adults.

Course Outcomes

- 1. Demonstrate knowledge of evidence-based nutrient requirements (including the rationale for specific requirements throughout the life cycle) and nutritional status assessment methods used to determine diet adequacy among pregnant and lactating women; infants; children; adolescents; and older adults.
- 2. Assess the nutritional status of a pregnant woman and provide appropriate recommendations for dietary improvement based on nutrient requirements during this life stage.
- 3. Assess the nutritional status of a young child and provide appropriate recommendations for dietary improvement based on nutrient requirements during this life stage.
- 4. Effectively write a scientific review paper based on searching, evaluating, and synthesizing previously published peer-reviewed research.
- 5. Evaluate and offer constructive feedback of peers' written works in a manner consistent with the "real-world" professional scientific article review process.

NDFS 435 : Nutritional Biochemistry. (4:4:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NDFS 200 & PDBIO 305 & CHEM 285; or NDFS 200 & PDBIO 305 & CHEM 481

DESCRIPTION: Metabolic interrelationships among nutrients.

Course Outcomes

- Demonstrate ability to search, interpret, and summarize original scientific information in an efficiently written scientific paper.
- Demonstrate knowledge of nutrient chemical structures, food sources, digestion, absorption, transport, metabolism and functions, and the metabolic consequences of nutrient deficiencies, interactions, imbalances and toxicities.
- Demonstrate knowledge of appropriate design for scientific experiments.
- Understand the biochemical functions and pathways of nutrients in the body.
- Identify physiological, biochemical and metabolic changes associated with deficient nutrient intake, excessive nutrient intake and selected metabolic diseases.

NDFS 440 : Teaching Methods in Dietetics. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Learning theory; curriculum development and dissemination; nutrition counseling; for dietetics majors.

Course Outcomes

- Demonstrate an understanding of the theories of teaching and learning
- Develop lesson plans, to include behavioral objectives, concepts, and learning experiences, and domain of learning
- Demonstrate the ability to meet the varied learning styles of individuals
- Use a variety of instructional methods
- Develop appropriate educational and visual support materials for individual or group instruction
- Demonstrate ability to effectively teach and/or counsel individuals and groups
- Identify and use theories/methods of counseling and interviewing individuals
- Discuss effective use of print and broadcast media
- Demonstrate an understanding of pre-assessment, and of formative and summative evaluation techniques
- Identify the impact of health beliefs and stages of change on education.
- Dress professionally when in the teaching role

NDFS 445 : Foodservice Systems. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 374

DESCRIPTION: Input, transformation, and output in the food service system; emphasizes procurement, production, service, and sanitation.

Course Outcomes

- Apply knowledge of management functions and skills to the technical operation of a foodservice system, and compare foodservice operations through application of systems theory
- Discuss the response of industry segments to current societal, demographic, technological, and menu trends
- Discuss the procurement subsystem and the functions of that subsystem, including:The functions of the marketing channel and its agents;Value analysis, sensory analysis, and other tools used in selection of products appropriate for organization's needs;Laws, standards, terminology, specifications, and references for the purchase of food, supplies, and services;Vendor selection and evaluation;Purchasing methods and procedures; and legal and ethical aspects of purchasing
- Identify managerial roles in the food production subsystem, including:Use of forecasting models;Planning and purchasing equipment; Principles of facility design and work flow; and Principles of ergonomics and productivity enhancement.
- Explain the distribution and service subsystem, including:Delivery systems for various types of foodservices;Types of table and self service;Large equipment and small wares used in distribution and service;Service oriented organizations
- Discuss the sanitation and maintenance subsystem from the standpoint of personnel, product, and place
- Identify the relationship of quality assessment programs, including Joint Commission, to foodservice subsystems and the organization
- Identify the interrelated functions of the procurement, production, distribution/service, and maintenance subsystems of a foodservice operation
- Describe the monitoring and marketing of nutrition throughout the foodservice system
- Describe environmental issues related to food production and service.

NDFS 450 : Food Chemistry. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: NDFS 250 & NDFS 251 & CHEM 285; or NDFS 250 & NDFS 251 & CHEM 352

DESCRIPTION: Structure and properties of food components, including water, carbohydrates, protein, lipids, other nutrients, and food additives. Chemistry of changes occurring during processing, storage, and utilization.

Course Outcomes

- Explain the chemistry of food components, including their properties and reactions
- Explain the major chemical reactions that occur during food processing and storage, including those that limit food shelf life
- Solve real-world problems related to food chemistry
- Write a research proposal on a food chemistry topic. Include objectives, literature review, experimental design and references

NDFS 458 : Management in Dietetics. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: NDFS 445

DESCRIPTION: Management cycle and theory applied to clinical and administrative dietetics.

Course Outcomes

- Explain dietetics management in the context of a system.
- Discuss group dynamics and work group formation and participate effectively in group tasks.
- Identify and use principles of effective communication and negotiation.
- Identify tools used and steps in the decision making and planning processes.
- Identify the management functions, including planning, organizing, staffing, leading, monitoring, and evaluating.
- Use financial planning, control, and budgeting tools.
- Identify principles of human resource management, including determining manpower needs, recruiting and interviewing, orientation and training, performance appraisal, diversity issues, conflict management, and labor relations laws.
- Describe theories of effective management and leadership.
- Identify theories of motivation and organizational change.
- Discuss concepts of disaster planning and risk management.
- Explain management information systems in dietetics

NDFS 462 : Food Regulations and Quality Assurance. (2:2:0)

WHEN TAUGHT: Fall

PREREQUISITE: STAT 121 & NDFS 250 & NDFS 251

DESCRIPTION: Federal and international food regulations and methods of assuring food quality.

Course Outcomes

- Apply ethical reasoning to make business decisions based on principles of integrity and honesty
- Be able to locate, retrieve and interpret specific laws, regulations, guidelines and directives relating to food, its manufacture, labeling, distribution and sale
- Be able to apply the principles of food science and statistics to control and assure the quality of food products
- Prepare a HACCP documentation system for any defined food product/process
- Explain how the legislative, executive, and judicial branches of federal and state government function and interact to regulate and control the safety, wholesomeness, and economy of the food supply
- Prepare a legal food label

NDFS 464 : Food Sensory Evaluation. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: STAT 121 & NDFS 250 & NDFS 251; This class should be taken concurrently with NDFS 465.

DESCRIPTION: Analytical and affective methods of assessing sensory properties of food using statistical methods. Laboratory experience in sensory research and techniques. Integrative capstone course.

Course Outcomes

- Use the computer to prepare and deliver questions to panelist.
- Use a computer to collect data from consumer panelists doing affective tests
- Use statistical packages such as SAS to do statistical analysis such as one and two way ANOVA and to make inferences from actual sensory data
- Create and use a spread sheet to display and analyze data, make calculations and do statistical analysis
- Use a computer to write reports.
- Generate a hypothesis, test it using a consumer or discrimination panel, and prepare a report for a client on the findings.
- Use binomial statistics to draw conclusions on categorical data
- Collect data, analyze it using ANOVA, make inferences from the F values and p>F values on the ANOVA result
- Determine your threshold for four basic tastes
- Describe sensory biases and how to best deal with them
- Plan, conduct and report on a discrimination test and use binomial statistics to make inferences
- Demonstrate understanding of preference and ranking tests and use of binomial statistics to make inferences
- Show how to determine when Quantitative Descriptive panelists are trained and when they need more training
- Lead and participate in groups in developing hypotheses, planning and conducting experimentation to test that hypothesis

NDFS 465 : Food Product Development. (3:1:6)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 361 & NDFS 362 & NDFS 462; This class should be taken concurrently with NDFS 464.

DESCRIPTION: Integration and application of food science principles to develop new food products. Laboratory experience in food product design and development. Integrative capstone course.

Course Outcomes

- Prepare raw material, product, and process specifications for a product and related commercial manufacturing process
- Work with a team in successfully commercializing a new or improved food product
- Coordinate, plan, and execute a stability test
- Coordinate, plan, and execute a plant trial
- Prepare and follow workable project time-lines for multiple development projects
- Coordinate, plan, and execute an appropriate consumer test for guidance or decision making

- Properly prepare and document all information required for a finished food product label
- Keep a precise, well-documented laboratory notebook that will stand up under scrutiny in a court of law

NDFS 466 : Advanced Dietetics Practice. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: NDFS 356 & NDFS 440 & NDFS 458

DESCRIPTION: Skill development in specialized topics of medical nutrition therapy and administrative dietetics.

Course Outcomes

- Apply the principles of the metabolic response to stress to the critical care setting.
- Make recommendations, calculate, and monitor all forms of nutrition support in acute care, home care, and extended care settings.
- Apply the Nutrition Care Process and the principles of Medical Nutrition Therapy to the following conditions: HIV disease, thermal injury, diabetes, high risk pregnancies, high risk infants, complex pediatric disorders, developmental disorders, metabolic disorders.
- Use and interpret menu engineering data in making pricing and menu decisions.
- Apply knowledge of the systems approach and management issues in foodservice, clinical, and community settings to coordinate a department set-up.
- Accreditation Council for Education in Nutrition and Dietetics Core Knowledge for the RDCore Knowledge for the RDBy the conclusion of the course, students will:Measured/Met by:KRD 1.1, 3.1Metabolic Responses. Apply the principles of the metabolic response to stress to the critical care setting.Clinical Nutrition WorksheetsNutrition Support WorksheetsKRD 1.1, 3.1Nutrition Support. Make recommendations, calculate, and monitor all forms of nutrition support in acute care, home care, and extended care settings.Clinical Nutrition WorksheetsNutrition Support WorksheetsKRD 1.1, 3.1, 4.5Nutrition Care Process and Principles of Medical Nutrition. Apply the Nutrition Care Process and the principles of Medical Nutrition Therapy to the following conditions: HIV disease, thermal injury, diabetes, high risk pregnancies, high risk infants, complex pediatric disorders, developmental disorders, metabolic disordersClass Discussions Clinical WorksheetsKRD 4.2, 5.1Menu Engineering Data. Use and interpret menu engineering data in making pricing and menu decisions.Capstone Management ProjectKRD 2.1, 2.3, 4.1, 4.2, 4.3, 4.4, 5.1Systems Approach and Management Issues. Apply knowledge of the systems approach and management issues in foodservice, clinical, and community settings to coordinate a department set-up.Capstone Management Project2012 standards

NDFS 475 : Research Methods in Dietetics. (2:2:0)

WHEN TAUGHT: Winter

PREREQUISITE: Senior status in dietetics program.

DESCRIPTION: Research techniques in a variety of dietetics practice areas.

Course Outcomes

- Identify types of research and their appropriate use, including: research question, sample selection, methodologies, data collection methods, data analysis methods
- Demonstrate how to locate, interpret and evaluate and use professional literature to make ethical evidence based practice decisions
- Use current information technologies to locate and apply evidence based guidelines and protocols
- Design research projects using appropriate methods of sample selection and data collection
- Develop survey questionnaire for appropriate research objectives
- Utilize visual aids and communication skills to present concepts in oral and written reports
- Interpret and evaluate research reports in literature
- Interpret and apply basic statistics
- Develop ability to see research possibilities in variety of dietetic employment settings

NDFS 490 : Professionalism Seminar. (2:2:0)

WHEN TAUGHT: Winter

PREREQUISITE: Senior status in dietetics program.

DESCRIPTION: Issues in professional practice.

Course Outcomes

- Understand the ethics of care, including the ADA Standards of Practice and Code of Ethics. Be able to relate these to the issues of death and dying
- Understand changing health care delivery systems, the role of Joint Commission, ADA's Nutrition Care Process and Model, and implications for dietitians; interact with other health care professionals
- Complete a personal portfolio, which includes a professional resume; be prepared for a professional interview, including appropriate dress
- Understand current professional issues as related to the Academy, including reimbursement, Public Policy, the Journal, and Academy Membership
- Accreditation Council for Education in Nutrition and Dietetics Core Knowledge for the RDCore KnowledgeBy the conclusion of the course, students will:Measured/Met by:KRD 2.1, 4.3, 4.4, 4.5Understanding Dietetics Processes. Understand changing health care delivery systems, the role of Joint Commission, AND's Nutrition Care Process and Model, coding/billing and implications for dietitians; interact with other health care professionalsInterview with Health Professional, Class DiscussionKRD 2.1Professionalism. Complete a personal portfolio, which includes a professional resume; be prepared for a professional interview, including appropriate dress Portfolio, Resume, Journal Presentation, Interview with Health ProfessionalKRD 2.3Ethics of Care. Understand the ethics of care, including the AND Standards of Practice and Code of Ethics. Be able to relate these to the issues of death and dying Ethics scenarios, Class discussionKRD 2.3, 4.3Professional Issues Related to the Academy of Nutrition and Dietetics. Understand current professional issues as related to the Academy, including reimbursement, Public Policy, the Journal, Academy Membership, and Scope of PracticeInterview with a Health Professional, The Academy Journal Presentations, Scope of Practice, Class discussion2012 standards

NDFS 491 : Internship Preparation. (1:1:0)

WHEN TAUGHT: Fall

PREREQUISITE: Senior status in dietetics program.

DESCRIPTION: Selecting internship sites and preparing dietetic internship application packet.

Course Outcomes

- Prepare an effective application packet for the dietetic internship or for other employment/graduate school pursuits
- Consider factors relevant to selecting dietetic internships to which to apply
- Establish realistic plans for life following graduation

NDFS 494R : Undergraduate Research in Nutrition, Dietetics, or Food Science. (1-3:0:9)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Instructor's consent.

DESCRIPTION: Mentored research experience.

Course Outcomes

- Students will develop skillsets in data collection, data entry, and/or data analysis methods.
- Students will develop an increased understanding of the most up-to-date findings in the areas we are researching in the lab.
- To coordinate our research efforts in the lab
- Students will gain experience presenting research to the group and will increase their critical thinking skills discussing original research articles.

500-Level Graduate Courses (available to advanced undergraduates)

NDFS 520R : Supervised Practice Experience. (1-4:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Acceptance into dietetic internship.

DESCRIPTION: Supervised practice experience in clinical, management, and community dietetics settings.

Course Outcomes

- Practice Management and Use of Resource: Use strategic application of principles of management and systems in the provision of services to individuals and organizations.
- Scientific and Evidence Base of Practice: Be able to integratescientific information and research into practice.
- Clinical and Customer Services: develop and deliver quality information, products and services to individuals, groups and populations.
- Professional Practice Expectations: Develop and showbeliefs, values, attitudes and behaviors for the professional dietitian level of practice.

NDFS 521 : Clinical Practice in Dietetics. (2:2:32)

PREREQUISITE: Acceptance into dietetic internship.

DESCRIPTION: Supervised practice in clinical dietetics.

Course Outcomes

- Evaluate emerging research for application in dietetics practice
- Apply evidence-based guidelines, systematic reviews and scientific literature (such as the ADA EAL, Cochrane Database of Systemic Reviews and the U.S. DHHS, Agency for Healthcare Research and Quality, National Guideline Clearinghouse) in the nutrition care process and model and other areas of dietetics practice
- Practice in compliance with current federal regulations and state statutes and rules, as applicable and in accordance with accreditation standards and the ADA Scope of Dietetics Practice Framework, Standards of Professional Performance and Code of Ethics for the Profession of Dietetics
- Demonstrate professional writing skills in preparing professional communications (e.g. research manuscripts, project proposals, education materials, policies and procedures)
- Design, implement and evaluate presentations considering life experiences, cultural diversity and education background of the target audience
- Use effective education and counseling skills to facilitate behavior change
- Demonstrate active participation, teamwork and contributions in group settings
- Refer clients and patients to other professionals and services when needs are beyond individual scope of practice
- Apply leadership principles effectively to achieve desired outcomes
- Establish collaborative relationships with internal and external stakeholders, including patients, clients, care givers, physicians, nurses and other health professionals, administrative and support personnel to facilitate individual and organizational goals
- Demonstrate professional attributes such as advocacy, customer focus, risk taking, critical thinking, flexibility, time management, work prioritization and work ethic within various cultures
- Perform self assessment, develop goals and objectives and prepare a draft portfolio for professional development as defined by CDR
- Assess the nutritional status of individuals, groups and populations in a variety of settings where nutrition care is or can be delivered
- Diagnose nutrition problems and create problem, etiology, signs and symptoms (PES) statements.
- Plan and implement nutrition interventions to include prioritizing the nutrition diagnosis, formulating a nutrition prescription, establishing goals and selecting and managing intervention
- Monitor and evaluate problems, etiologies, signs, symptoms and the impact of interventions on the nutrition diagnosis
- Develop and demonstrate effective communications skills using oral, print, visual, electronic and mass media methods for maximizing client education, employee training and marketing
- Develop and deliver products, programs or services that promote consumer health, wellness and lifestyle management merging consumer desire for taste, convenience and economy with nutrition food safety and health messages and interventions
- Deliver respectful, science-based answers to consumer questions concerning emerging trends
- Complete documentation that follows professional guidelines, guidelines required by health care systems and guidelines required by the practice setting

NDFS 522 : Food Systems Management Practice in Dietetics. (2:2:32)

PREREQUISITE: Acceptance into dietetic internship.

DESCRIPTION: Supervised practice in foodservice systems management.

Course Outcomes

- 2CD 4: Perform self assessment, prepare a portfolio for professional development, and participate in lifelong learning activities• Discuss performance at midpoint and conclusion of rotation with instructors• Complete taste panel & theme day evaluation to examine individual and team performance
- #OBJECTIVESBy the conclusion of the Food Production Management rotation, the intern will:LEARNING ACTIVITIES1CD 1: Perform ethically in accordance with the Code of Ethics for the Profession of Dietetics• Comply with Pendulum Court policies and procedures• Accept responsibility for decisions and actions
- 3CD 6: Use current technologies for information & communication activitiesCD 19: Perform marketing functionsFS 9: Supervise marketing functions• Use computer technology in research, presentations, procurement, advertising/ marketing, and web site maintenance• Oversee all marketing aspects of Pendulum Court• Develop and execute marketing strategy for theme day
- 4CD 13: Interpret and incorporate new scientific knowledge into practiceCD 29: Manage safety and sanitation issues related to food and nutrition• Use scientifically accurate resources to research course topics and projects• Use current sanitation knowledge in foodservice practice• Receive ServSafe Certification following training course• Oversees sanitation file: MSDS forms, HAZCOM Training, Food Handler's Permits• Supervise all sanitation issues and responsibilities
- 5CD 14: Supervise quality improvement, including systems and customer satisfaction, for dietetics service and/or practiceCD 15: Develop and measure outcomes for food and nutrition services and practiceCD 24: Supervise development and/or modification of recipes/formulas• Develop and administer surveys and interact with customers to assess customer and their perceptions• Oversees all food preparation (quality, timely product, aesthetics)• Supervise recipe development and alterations• Develop taste panel evaluation form as a measure of recipe development
- 6CD 16: Participate in organizational change and planning and goal-setting processesCD 20: Participate in human resources functions• Conduct daily production meeting• Develop and implement daily production sheets and service-line set-up form• Advertise, interview, hire, train, and supervise employees in paid positions
- 7CD 18: Supervise the collection and processing of financial data.CD 22: Supervise the integration of financial, human, physical, and material resources and servicesFS 6: Manage the integration of financial, human, physical, and material resources.• Valuing inventory• Manage cashier, cashiering functions, and revenues• Oversee all processing and payment of invoices• Gather and evaluate revenue and expenditure data for Pendulum Court
- 8CD 23: Supervise production of food that meets nutritional guidelines, cost parameters, and consumer acceptanceFS 4: Manage production of food that meets nutritional guidelines, cost parameters, and consumer acceptance• Prepare daily production sheets and frozen food utilization sheets.• Directly responsible for students in production and final food product• Responsible for decision making related to production• Prepare and conduct student performance evaluation at midpoint or conclusion of rotation• Develop and execute theme day
- 9CD 26: Supervise design of menus as indicated by the patient's/client's health status• Collaborate on writing an 8 day cycle menu• Individually modify menu for various health requirements
- 10CD 27: Participate in applied sensory evaluation of food and nutrition products• Conduct taste panel used for recipe development• Participate in cutting demonstration conducted by foodservice professionals
- 11CD 28: Supervise procurement, distribution, and service within delivery systemsFS 5: Manage procurement, distribution, and service within delivery systems• Tour BYU Dining Services for expanded exposure to procurement, distribution, and service• Participate in Pendulum Court Forecasting• Manage all aspects of procurement, including on and off-campus vendors• Compare costs and make recommendations for new products• Write specification for use in Pendulum Court

Graduate Courses

For 600- and 700-level courses, see the BYU 2013–2014 Graduate Catalog.

Admission to Degree Program

All degree programs in the Department of Physiology and Developmental Biology are open enrollment.

The Discipline

Physiology is the study of the *functions* of the body systems. Developmental biology is the study of how specific genes govern differentiation of cells, tissues, and organs with unique structure and functions. Both disciplines require a firm foundation of mathematics, chemistry, physics, and cellular biology. The related area of biophysics uses the methods of physics, chemistry, mathematics, and biology to investigate the *physical* basis of life.

Upper-division courses require synthesizing and integrating information from many areas of science to allow understanding of such remarkable processes as how the heart pumps blood, how neurons communicate with one another, how insulin regulates blood sugar, and how specific gene products determine the morphology and functional capacity of the nervous system. Knowledge in these areas is expanding rapidly as new techniques are applied in molecular biology. Hence, significant exposure to the concepts and techniques of molecular biology is an important component of the major.

Career Opportunities

A major in physiology and developmental biology prepares students to pursue advanced degrees in either the biological sciences or nonbiological fields or to enter directly into employment. This major provides outstanding preparation for students seeking admittance into professional programs in medicine, dentistry, optometry, podiatry, chiropractic, or pharmacy. Students who have aspirations of doing health-related research will find a challenging, thorough preparation for entrance into graduate programs and beyond. Graduates of the program will also have the academic and laboratory skills necessary for employment in medical, biotechnological, and pharmaceutical industries. This degree offers students pursuing advanced degrees in business, public management, or law the knowledge and training necessary to be admitted into professional schools and work in governmental agencies, health care and biotechnical industries, and patent or health care law.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

Undergraduate Programs and Degrees

BS in Biophysics (Program Outcomes)
BS in Physiology and Developmental Biology (Program Outcomes)

Students should see the Life Sciences Student Services for help or information concerning the undergraduate programs.

Note: For the neuroscience program, see the Neuroscience Center section.

Graduate Programs and Degrees

MS and PhD degrees are offered. For information see the BYU 2013–2014 Graduate Catalog and the Web page for the College of Life Sciences.

1. Complete the following life sciences core courses:

BIO 420 : Evolutionary Biology. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBIO 240 & PWS 340
RECOMMENDED: Concurrent enrollment in Bio 421.
DESCRIPTION: Intensive examination of evolution as the conceptual cornerstone of biology.

Course Outcomes

- Students will be able to describe the history and development of evolutionary thought.
- Students will be able to list and describe the evidence for evolution and its required corollaries.
- Students will be able to describe the mechanisms by which evolution occurs. Provide detailed explanations of the the processes of evolution by mutation, migration, genetic drift, non-random mating, and natural selection.
- Students will be able to explain adaptation, providing examples from several different fields of biology (e.g., cell biology, physiology, conservation biology, bioinformatics, medicine, behavior, etc.).
- Students will be able to describe the history of life on earth. Identify major evolutionary transitions over time, and explain the tools and evidence that support current hypotheses of the history of life.

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.
DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

MMBIO 241 : Molecular and Cellular Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBio 240 or concurrent enrollment.
DESCRIPTION: Molecular and cellular biology techniques laboratory.

Course Outcomes

- Practice ethics and integrity by working with groups and following lab rules.*Relates to Program Learning Outcome: A commitment to professional integrity and ethical behavior consistent with themission of the university.
- Learn the basics of experimental design, how to formulate a hypothesis, what controls to use, how to interpret experimental data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Practice scientific communication through written lab questions, exams and oral presentations.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Learn molecular biology laboratory techniques through practical laboratory exercises. Techniques include, spectrophotometry,isolation of DNA and protein, quantification of DNA and protein, techniques used to purify or detect specific proteins, such aschromatography, western blot and ELISA, DNA fingerprinting, polymerase chain reaction and enzyme assays.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology.

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also
WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes
There are no course outcomes available

PDBIO 360 : Cell Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Fundamentals of cell structure and function with reference to analytical methods used by cell biologists. Practice in designing, executing, and interpreting relative experiments.

Course Outcomes
- Students will demonstrate knowledge of the molecular architecture of the nucleus, including the nuclear envelope, nucleoplasm and nucleolus, chromatin, and the nuclear pore.
- Students will demonstrate an understanding of protein transport, including nuclear import and export and vesicular transport through the secretory and sorting pathways.
- Students will demonstrate knowledge of the molecular and cellular structure and dynamics of cytoskeletal systems.
- Students will be able to apply the basic cell biological principles in outcomes 1-3 to more complicated cellular processes, including cell adhesion, cell migration, cell polarity, cell division, cancer, and development.
- Students will demonstrate the ability to generate hypothesis about how cell biological systems work at the molecular level and design experiments that test that hypothesis.
- Students will demonstrate competence in interpreting original raw data from cell biology experiments, including microscopy, protein biochemistry, molecular biology, and genetics strategies
- Students will demonstrate the ability to critically evaluate primary cell biology literature, including the ability to evaluate the design and interpretation of experimental data.

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes
- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

2. Complete the following chemistry courses:

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes
- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

Course Outcomes
- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105

including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.
DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.
NOTE: Required for most students needing one year of general chemistry.

Course Outcomes
- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: CHEM 105; or CHEM 111
DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.
NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes
- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: CHEM 351; or CHEM 351M
DESCRIPTION: Continuation of Chem 351.

Course Outcomes
- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Chem 352 or concurrent enrollment (preferred).
DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.
NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes
- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

(1 hour required)

CHEM 468 : Biophysical Chemistry. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481 & MATH 113 & PHSCS 220; or CHEM 481M & MATH 113 & PHSCS 220

DESCRIPTION: Applications of physical chemistry to biological systems. Spectroscopic applications, computational methods, structural biochemistry, thermodynamics, equilibria, statistical mechanics, transport properties, kinetics, quantum mechanics.

NOTE: For biochemistry (BS) majors and those interested in the health professions or biochemistry. (For prerequisites, Phscs 220 may be taken concurrently.)

Course Outcomes

- Describe conceptually the fundamental concepts in the four principal areas of physical chemistry: classical thermodynamics, statistical thermodynamics kinetics and quantum mechanics
- Define mathematically the concepts outlined in 1) and manipulate the fundamental and derived equations associated with these concepts
- Use the above skills to calculate or predict the equilibrium conditions or direction of spontaneous biochemical processes that are involved in metabolism or energy transfer events given appropriate thermodynamic data and initial system conditions
- Employ mathematical and graphical techniques on enzyme kinetic data to extract key parameters and to identify inhibition mechanisms
- Solve simple Schroedinger equation problems (e.g., particle in a box), identify boundary conditions, and explain the significance of boundary conditions on the observance of quantized effects
- Relate the simple Hamiltonians from above to biological molecules and systems and generalize from the simple results to make predictions regarding behavior in the biological systems
- Identify the nature of electronic energy levels in key photoactive biological molecules and use spectroscopic data to probe these levels
- Apply fundamental concepts of electronic structure and reaction kinetics to the steps in photosynthesis and vision
- Provide examples in which physical chemistry perspectives have enabled a deeper more complete understanding of the structure and function of biological molecules and complex biological systems

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes

- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

3. Complete the following math and physics courses:

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

Course Outcomes

This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Calculus or concurrent enrollment.

DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

Course Outcomes

- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

PHSCS 123 : Introduction to Waves, Optics, and Thermodynamics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 121 or equivalent. Calculus.

DESCRIPTION: Waves, thermal physics, optics, special relativity, and introduction to modern physics. Weekly lab.

Course Outcomes

- Solve problems and answer conceptual questions using the basics of fluid statics and dynamics, including Bernoulli's principle and Pascal's law.
- Answer conceptual questions and calculate changes in temperature, pressure, entropy and volume for quasistatic ideal gas processes and be able to determine work done and efficiency for gas engines, heat pumps, and refrigerators. Determine heat flow and temperatures in systems in steady state.
- Solve problems and answer conceptual questions involving waves, using concepts such as wave speed, wavelength, frequency, superposition, beats, and resonance. Solve wave interference problems.
- Find the location and magnification of images in single- and multiple-lens/mirror systems by calculation and by ray tracing, and be able to work general problems in optics using Snell's law and specular reflection.
- (Section 1) Solve problems and answer conceptual questions in basic modern physics including special relativity, and quantum mechanics and nuclear physics.
- (Section 2) Solve more advanced problems and answer conceptual questions in wave analysis, including calculating group and phases velocities, solving for Fourier coefficients of periodic functions, and frequencies of notes in the equal temperament musical scale. Solve problems in special relativity.

PHSCS 140 : Electronics Lab. (1:1:2)

WHEN TAUGHT: Winter; Spring

DESCRIPTION: Introduction to analog and digital circuits.

Course Outcomes

- Build and debug basic analog circuits that are of practical use in experimental physics such as voltage dividers, diode rectifiers, inverting and non-inverting op amp circuits, and transistor switches.
- Demonstrate understanding of electrical concepts of voltage, current, resistance, power, and input and output resistance through the analysis of simple circuits.
- Demonstrate proper use and limitations of electrical sources and test equipment including DC power supplies, multimeters, oscilloscopes, and function generators.
- Build and debug basic digital circuits that use components such as digital gates, flipflops, counters, and digital to analog converters.

PHSCS 220 : Introduction to Electricity and Magnetism. (3:3:1)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: MATH 113; Phscs 121 or equivalent.

DESCRIPTION: Electricity and magnetism. Weekly lab.

Course Outcomes

There are no course outcomes available

4. Complete the following major core courses:

PDBIO 362 : Advanced Physiology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220

DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.

NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes
- Students will manifest an understanding of how structures at the molecular level lead to properties associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

PDBIO 363 : Advanced Physiology Laboratory. (1:.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 362 or concurrent enrollment; or instructor's consent.

DESCRIPTION: Experiments and exercises in advanced physiology emphasizing human physiology. Computer simulations of muscle function, endocrine disease, and human physiology. Emphasizes problem solving and calculations.

Course Outcomes
- Students will demonstrate the skills required to properly interpret data from scientific experimentation to discover how physiological systems function.
- Students will manifest an understanding of basic physiological principles by modeling how human cells, organs, and organ systems function.
- Students will describe how interactions between human organ systems work to maintain homeostasis.

PDBIO 455R : Physiology and Developmental Biology Seminar. (.5:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Seminar (research) presentations for undergraduates in physiology and developmental biology.

Course Outcomes
- Students will be able to demonstrate the format, organization, and presentation of a typical scientific seminar.
- Students will demonstrate the proper etiquette of scientific interactions by participating in question/answer periods following each seminar.

PDBIO 568 : Cellular Electrophysiology and Biophysics. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 362 & PHSCS 140; or PDBIO 362 & PHSCS 220

DESCRIPTION: Using electrophysiology and biophysics as an approach to study of physiology. Extensive look at ion channels and cell signaling.

Course Outcomes
- Students will demonstrate biophysical knowledge gained in specific areas including membrane properties, voltage and ligand-gated receptors, neurotransmission and mathematical modeling.
- Students will apply the biophysical knowledge gained in a laboratory setting.
- Students will demonstrate critical thinking and evaluation skills gained in the course by preparing a competent and clearly written research proposal.
- Students will demonstrate knowledge of a particular research topic and presentation skills in a clear and informative oral presentation.

5. Complete 11 hours from the following. At least 4 hours must come from the mentored experience and at least 5 hours from electives.
   a. Mentored laboratory experience (must be in an approved biophysics lab):

PDBIO 494R : Undergraduate Research in Physiology and Developmental Biology. (1-4:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Basic (entry level) research laboratory experience for students interested in physiology and developmental biology.

Course Outcomes
- Students will demonstrate the ability to properly perform basic laboratory-specific techniques.
- Students will complete laboratory-specific safety training.

PDBIO 495R : Advanced Undergraduate Research in Physiology and Developmental Biology. (1-4:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: 2 credit hours of PDBio 494R.

DESCRIPTION: Senior level research laboratory experience for majors in physiology and developmental biology.

Course Outcomes
- Students will demonstrate an understanding of hypothesis development and the design of experiments to test hypothesis.
- Students will independently carry out laboratory experiments.
- Students will analyze experimental data and, where appropriate, perform statistical analysis.

PDBIO 498 : Advanced Senior Research Project. (3:Arr.:Arr.)

WHEN TAUGHT: Contact Department.

PREREQUISITE: PDBIO 494R & PDBIO 495R; Instructor's consent must be obtained during previous semester.

DESCRIPTION: Special project course for advanced PDBio research students. Engaging in scientific research as specified in an approved research proposal. Comprehensive written work of research required.

Course Outcomes
- Students will formulate a testable hypothesis relating to a topic in physiology and developmental biology .
- Students will design experiment (s) to test their hypothesis.
- Students will present a proposal describing their research topic, their hypothesis and experimental design.
- Students will independently carry out their proposed research.
- Students will analyze their experimental data.
- Students will report their findings in a manuscript intended for publication in a scientific journal.

b. Electives

CHEM 223 : Quantitative and Qualitative Analysis. (4:2:6)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: CHEM 107; or CHEM 113

DESCRIPTION: Principles of chemical equilibrium, quantitative chemical measurements, and qualitative detection of selected chemical species.

NOTE: Primarily for majors in molecular biology and the life sciences.

Course Outcomes
- Course Objectives: The course is designed to develop research skills. The labwork will have a somewhat bioanalytical focus, e.g. the chemical analysis of biological molecules or biologically related ions and the use of biomolecules in assays. We will work to develop good laboratory practice, both conceptually and practically, and consider how to do good science. The combined lecture/lab approach will be used to help you understand quantitative approaches to analysis, sources of error, and the utility but also limitations of laboratory measurements. You will be asked to apply a portion of this knowledge to your own laboratory determinations. We will also discuss more advanced analytical methods involving chemical separations and instrumental analyses. This course fills one of the requirements for a minor in chemistry.

CHEM 227 : Principles of Chemical Analysis. (4:2:6)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: CHEM 113

DESCRIPTION: Principles of quantitative analysis, introductory instrumental methods, and computer applications to chemical analysis.

Course Outcomes
- Demonstrate skill in performing precise, careful, basic laboratory operations such as sample preparation, calibration techniques, spectrophotometry, electrochemical analysis, titrimetric and chromatographic methods
- Explain basic measurement methods and devices
- Show proficiency in reporting scientific results in numerical, graphical, and written formats, and be able to explain the ethical standards for such reports
- Show proficiency in using computer programs for data analysis
- Apply basic statistics to data analysis including, confidence intervals, t-test, linear regression, propagation of error, sampling statistics and signal-noise enhancement
- Critically evaluate experiments and data with respect to theory and models
- Apply knowledge to new problems, including the design and validation of new analytical methods

CHEM 482 : Mechanisms of Molecular Biology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Second-semester biochemistry. Nucleic acid biochemistry and molecular biology: nucleotide metabolism, chromosome and chromatin structure, DNA structure and replication, RNA transcription and gene expression, protein synthesis and regulation, eukaryotic gene systems, signal transduction.

Course Outcomes
- Draw the structure of DNA, determine the topology of a plasmid, explain the chemical sequence of events that occur during DNA replication and draw structural changes that occur due to mutation.
- Determine how to perform and interpret an electrophoresis separation of DNA fragments, southern blot, restriction map, polymerase chain reaction, and a DNA sequencing reaction with necessary controls.
- Design a DNA cloning strategy, explain controls necessary, and write procedural plan.
- Draw and explain the mechanism of RNA transcription and how RNA is processed, spliced, and regulated. Understand the basic mechanisms of transcriptional regulation using the example of transcription of genes necessary for cholesterol synthesis.
- Determine when and how to use techniques that involve RNA: Northern blots, quantitative PCR, microarrays, S1 nuclease and primer extension mapping of the transcriptional start with appropriate controls.
- Determine the sequence of amino acids in a protein from a series of nucleotides.
- Draw and explain the process of protein translation and how it is regulated.
- Determine where a protein is localized in a tissue or cell: interpret a western blot, protein fusion assays.
- Determine with what a protein interacts: Interpret gel shift assays, Chromatin Immunoprecipitation, DNA footprinting, and yeast two hybrid reporter assays.
- Maintain faith through challenges and ethical boundaries in reporting and interpreting data.

CHEM 489 : Structural Biochemistry. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 468

DESCRIPTION: Molecular structures of proteins, RNA and DNA as determinants of biological function. Topics include thermodynamics of folding and binding, structural determination, spectroscopy, modeling, protein recognition.

Course Outcomes

- Identify motifs and symmetries in macromolecular structures and chemical interactions that maintain structural integrity
- Relate the structure of a macromolecule to its biological function
- Describe how X-ray crystallography, nuclear magnetic resonance, cryogenic electron microscopy, and circular dichroism techniques give structural information for biological macromolecules
- Communicate scientific ideas (e.g. structure-function relationships) clearly and concisely to others orally and in writing, and use ethical standards in oral and written presentations
- Work with peers to answer scientific questions

CHEM 581 : Advanced Biochemical Methodology 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 482

DESCRIPTION: Analytical and structural determination methods used in biochemical research, including mass spectrometry-based proteomics, immunotechniques, atomic force and electron microscopy, NMR and X-ray diffraction.

NOTE: One of two required courses for biochemistry graduate students. May be taken before or after Chem 583.

Course Outcomes

- Understand the theory, instrumentation and applications of proteomic, immunological and structural methods currently used to address important biochemical questions.
- Interpret and critique data from these techniques.
- Design appropriate experiments and apply these techniques to their own research problems.
- Recognize important technological advances in proteomic, immunological and structural methods.
- Present findings from the primary literature describing the application of these methods to significant biochemical questions in a professional manner.

CHEM 583 : Advanced Biochemical Methodology 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 482

DESCRIPTION: Maintenance and expression of genetic information, the role of nucleic acids in biology at the chemical and structural level, and methods to study and control nucleic acid function as a means of solving biological problems.

NOTE: One of two required courses for biochemistry graduate students. May be taken before or after Chem 581.

Course Outcomes

- Describe how genetic information is stably maintained, how it is expressed, and how that expression is regulated, with an emphasis on the mechanism by which molecular machines perform these processes.
- Understand methods for studying the structure and function of nucleic acids and methods for manipulating gene expression in living systems.
- Interpret and critique data obtained using these methods as reported in the primary scientific literature.
- Communicate this understanding in both oral and written formats. [
- Design appropriate experiments and apply the techniques of nucleic acid biochemistry to their own research problems.

CHEM 584 : Biochemistry Laboratory/Proteins. (3:1:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Introduction to current biochemical research procedures including spectrophotometry, chromatography, electrophoresis, and immunological techniques. Protein over-expression; isolation and characterization methods. Enzyme kinetics and protein-ligand interactions. Introduction to bioinformatics.

NOTE: May be taken before or after Chem 586.

Course Outcomes

- Apply spectroscopic techniques to analyze proteins, both their enzymatic and binding reactions
- Use gel electrophoresis and immunoblotting techniques to determine the presence and purity of proteins in biological samples
- Identify protein binding partners using co-immunoprecipitation methods
- Purify proteins using state-of-the-art separations methods
- Characterize an enzyme using steady state kinetics methods
- Use enzymes as analytical and diagnostic tools
- Properly record and interpret data
- Present data they have collected in an oral presentation and in a written scientific paper
- Understand ethical means of reporting results and giving proper credit to the work of others
- Measure ligand binding to proteins; determine dissociation constants and the degree of cooperativity.

CHEM 586 : Biochemistry Laboratory/Nucleic Acids. (3:1:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 482

DESCRIPTION: Laboratory course covering major techniques involved in isolation, amplification, and cloning of recombinant DNA as well as isolation, synthesis, translation, and identification of RNA.

NOTE: May be taken before or after Chem 584.

Course Outcomes

- Understand, design and execute experiments using basic DNA manipulation procedures that include isolation, purification and modification of DNA
- Explain and perform PCR amplification and use this technique to detect the presence of DNA "targets", DNA cloning (subcloning) and DNA sequencing
- Understand and explain how to isolate, quantitate and manipulate RNA
- Design and perform experiments to reverse transcribe RNA into complementary DNA (cDNA) and assess gene expression by semi- and quantitative PCR
- Isolate total RNA and be able to purify mRNA from this material
- Introduce and express foreign DNA and/or RNA in mammalian cells using the techniques of electroporation, lipid-based transfection, calcium phosphate based transfection and retroviral transduction
- "Knockdown" an expressed gene in mammalian cells using RNA silencing
- Prepare laboratory notebooks that include the objective, results and methods of each laboratory experiment. Additionally, students will provide conclusions to each experiment, including when appropriate, potential explanations to unexpected results

EC EN 301 : Elements of Electrical Engineering. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PHSCS 220 & MATH 303; or PHSCS 220 & MATH 334

DESCRIPTION: Linear electric circuits, computer organization, and logic circuits for nonmajors.

NOTE: Fee.

Course Outcomes

- Understand and apply basic principles of electronic circuits.

MATH 302 : Mathematics for Engineering 1. (4:4:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Math 113.

DESCRIPTION: Multivariable calculus, linear algebra, and numerical methods.

Course Outcomes

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For more detailed information, please visit the department wiki for this course at Math 302 Wiki.

MATH 303 : Mathematics for Engineering 2. (4:4:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 302

DESCRIPTION: ODEs, Laplace transforms, Fourier series, PDEs.

Course Outcomes

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For a more detailed course description, visit Math 303 Wiki.

MMBIO 430 : Advanced Cell Biology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 360; Bioscience major status.

DESCRIPTION: Molecular genetics, cell biology, and developmental biology.

Course Outcomes

- Read primary literature to further their own understanding of the topic*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Explain the processes of cell biology*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Apply knowledge of these molecular processes to broader topics*Relates to Program Learning Outcome: Proficiency in formulating and carrying out independent and collaborative research projects.
- Analyze research data, design experiments and present data in a clear manner*Relates to Program Learning Outcome: Communication skills in presenting their research findings through effective oral and written presentations.

MMBIO 441 : Advanced Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & CHEM 352

DESCRIPTION: Molecular biology of gene structure and expression in prokaryotic and eukaryotic

organisms.

Course Outcomes
- Learn molecular biology principles through study, lecture, and class discussion. An emphasis will be on understanding the experiments used to learn these principles.â ¨ *Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology preparing students for further education and/or employment.
- Apply the principles learned to design experiments and properly interpret experimental data.â ¨ *Relates to Program Learning Outcome: Proficiency in formulating research projects
- Present current research from the scientific literature.*Relates to Program Learning Outcomes: Communicate scientific information using oral methods; interpret, analyze and critique experiments from the primary scientific literature. Presenting research findings through effective oral and written presentations.
- Demonstrate integrity and ethical behavior during all class work.â ¨ *Relates to Program Learning Outcome: Commitment to professional integrity and ethical behavior consistent with the mission of the University.

MMBIO 442 : Advanced Molecular Biology Laboratory. (2:0:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 241; MMBio 441 or concurrent enrollment.

DESCRIPTION: Laboratory to accompany MMBio 441.

Course Outcomes
- Learn molecular biology laboratory techniques through hands-on experience. Techniques will include DNA and RNA isolation, PCR, microRNA isolation, northern blotting, RFLP analysis, site-directed mutagenisis, protein extraction and EMSA.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology
- Apply the techniques to design experiments with appropriate hypotheses and controls and properly interpret experimental data*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls
- Practice scientific communication and record-keeping through the completion of a laboratory notebook and answering written and oral questions and presentations.*Relates to Program Learning Outcome: Demonstrate Communication skills in presenting research findings through effective oral and written presentations.
- Design and carry out independent experiments*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls

NEURO 480 : Advanced Neuroscience. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NEURO 205; or PDBIO 362; PDBio 360; Neuroscience or PDBio major status.

DESCRIPTION: Principles of neural science. Structure-function relationships and integration of the nervous system.

Course Outcomes
There are no course outcomes available

PDBIO 365 : Pathophysiology. (4:4:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 305; or PDBIO 362

DESCRIPTION: Variations in physiological mechanisms that account for development of common disturbances in normal control and activities of body's organs and organ systems.

Course Outcomes
- Students will exhibit an integrative understanding of the biochemistry, molecular biology, genetics, cell biology, microbiology, environmental biology, and physiology related to the prevention, development, and treatment of common diseases.
- Students will demonstrate through case study analysis a command of problem solving skills related to the diagnosis and treatment of pathophysiological conditions.
- Pupils will manifest a command of the physiology and pathophysiological vocabulary necessary to effectively communicate with other biomedical professionals and the general public.
- Students will be able to articulate the ethical issues related to the treatment and prevention of pathophysiological conditions.
- Students will manifest an increase in their respect for the human body and adopt a life style consistent with this respect.

PDBIO 450R : Topics in Physiology and Developmental Biology. (1-3:ARR:ARR)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Close interaction between small groups of students and instructor on topics in physiology, developmental biology, or biophysics. Topics vary.

Course Outcomes
- Students will demonstrate an understanding of the scientific principles that underlie the techniques taught in the course.
- Students will perform effectively any experimental techniques taught in the course.
- Pupils will demonstrate an understanding of the specialized subject matter presented in the course.

PDBIO 498 : Advanced Senior Research Project. (3:Arr.:Arr.)

WHEN TAUGHT: Contact Department.

PREREQUISITE: PDBIO 494R & PDBIO 495R; Instructor's consent must be obtained during previous semester.

DESCRIPTION: Special project course for advanced PDBio research students. Engaging in scientific research as specified in an approved research proposal. Comprehensive written work of research required.

Course Outcomes

- Students will formulate a testable hypothesis relating to a topic in physiology and developmental biology .
- Students will design experiment (s) to test their hypothesis.
- Students will present a proposal describing their research topic, their hypothesis and experimental design.
- Students will independently carry out their proposed research.
- Students will analyze their experimental data.
- Students will report their findings in a manuscript intended for publication in a scientific journal.

PDBIO 561 : Physiology of Drug Mechanisms. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 362

DESCRIPTION: Overview of physiological and pharmacological mechanisms and principles of human therapeutics as applied to clinically significant pathophysiology.

Course Outcomes

- Students will manifest an interactive understanding of drug mechanisms at the molecular, cellular, tissue, organ, and/or systemic levels.
- Students will demonstrate that they understand the cellular pathways targeted for pharmacological treatment.
- Pupils will demonstrate a comprehension of how the body interacts with compounds used for pharmacological treatments.
- Students will manifest the knowledge, skills and vocabulary necessary to converse with health care providers concerning their own and family's medical treatments.

PDBIO 565 : Endocrinology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PDBio 362 or instructor's consent.

DESCRIPTION: Mammalian hormones.

Course Outcomes

- Students will be able to describe major actions of each hormone on target cells.
- Students will be able to describe pathways for synthesis, post-translational processing, and cellular localization or secretion for peptide hormones and hormone receptors.
- Students will be able to describe pathways for synthesis and inactivation for steroid hormones, thyroid hormones, and catecholamines.
- Students will be able to describe the control of synthesis and secretion for each hormone, including feedback relationships.
- Students will be able to describe major signaling pathways in target cells for each hormone.
- Students will be able to describe methodologies used to test hypotheses in study of problems in endocrinology.
- Students will be able to describe and recognize etiology and clinical symptoms of the major endocrine diseases

PHSCS 145 : Experimental Methods in Physics. (1:0:3)

WHEN TAUGHT: Fall; Summer

PREREQUISITE: PHSCS 140; Phscs 121 or equivalent.

DESCRIPTION: Introduction to physical measurement and analysis, optics, sensors, actuators, and computer-based data acquisition.

Course Outcomes

- Demonstrate good practices in experimental physics documentation and communication such as data collection, record keeping, and presentation.
- Demonstrate the ability to analyze experimental data this includes techniques such as error estimation, error propagation, model selection, and curve fitting.
- Use simple optical devices (e.g. lenses, mirrors, slits and gratings, polarizers) to explore the geometric and wave properties of light.
- Apply AC concepts such as frequency response, frequency filtering, fourier transform analysis, and impedance to sinusoidally-driven electrical, mechanical, optical, and acoustical systems.

PHSCS 230 : Computational Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 113

DESCRIPTION: Introduction to numerical and symbolic computation and graphical analysis using a symbolic mathematics program. Applications to mechanics, optics, and special relativity.

Course Outcomes

- Demonstrate the ability to apply calculus, linear algebra, and complex analysis to solve undergraduate-level physics problems.
- Demonstrate the ability to use programming constructs such as looping, conditional execution, and iteration to solve physics problems.

- Solve equations, including systems of equation, related to physical phenomena both symbolically and numerically.
- Demonstrate the ability to visualize, analyze, and interpret equations, data, and physical models.

PHSCS 240 : Design, Fabrication, and Use of Scientific Apparatus. (2:0:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PHSCS 123 & PHSCS 145

DESCRIPTION: Machining, computer interfacing, controls, and vacuum systems.

Course Outcomes

- Design, build, and interface experimental apparatus.
- Make involved physical measurements and analyze experimental results.
- Document in a personal lab notebook the procedures, methods, results, and analysis of laboratory exercises.
- Present work in writing and through oral presentations.
- Demonstrate understanding of professional ethics guidelines for research activities and presentation of results.

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

*Hours include courses that may fulfill university core requirements.

Program Requirements | View MAP | View Program Outcomes

1. Complete the following life sciences core courses:

BIO 420 : Evolutionary Biology. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBIO 240 & PWS 340
RECOMMENDED: Concurrent enrollment in Bio 421.
DESCRIPTION: Intensive examination of evolution as the conceptual cornerstone of biology.

Course Outcomes

- Students will be able to describe the history and development of evolutionary thought.
- Students will be able to list and describe the evidence for evolution and its required corollaries.
- Students will be able to describe the mechanisms by which evolution occurs. Provide detailed explanations of the the processes of evolution by mutation, migration, genetic drift, non-random mating, and natural selection.
- Students will be able to explain adaptation, providing examples from several different fields of biology (e.g., cell biology, physiology, conservation biology, bioinformatics, medicine, behavior, etc.).
- Students will be able to describe the history of life on earth. Identify major evolutionary transitions over time, and explain the tools and evidence that support current hypotheses of the history of life.

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.
DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

MMBIO 241 : Molecular and Cellular Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBio 240 or concurrent enrollment.
DESCRIPTION: Molecular and cellular biology techniques laboratory.

Course Outcomes

- Practice ethics and integrity by working with groups and following lab rules.*Relates to Program Learning Outcome: A commitment to professional integrity and ethical behavior consistent with themission of the university.
- Learn the basics of experimental design, how to formulate a hypothesis, what controls to use, how to interpret experimental data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Practice scientific communication through written lab questions, exams and oral presentations.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Learn molecular biology laboratory techniques through practical laboratory exercises. Techniques include, spectrophotometry,isolation of DNA and protein, quantification of DNA and protein, techniques used to purify or detect specific proteins, such aschromatography, western blot and ELISA, DNA fingerprinting, polymerase chain reaction and enzyme assays.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology.

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also
WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes
There are no course outcomes available

PDBIO 360 : Cell Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Fundamentals of cell structure and function with reference to analytical methods used by cell biologists. Practice in designing, executing, and interpreting relative experiments.

Course Outcomes
- Students will demonstrate knowledge of the molecular architecture of the nucleus, including the nuclear envelope, nucleoplasm and nucleolus, chromatin, and the nuclear pore.
- Students will demonstrate an understanding of protein transport, including nuclear import and export and vesicular transport through the secretory and sorting pathways.
- Students will demonstrate knowledge of the molecular and cellular structure and dynamics of cytoskeletal systems.
- Students will be able to apply the basic cell biological principles in outcomes 1-3 to more complicated cellular processes, including cell adhesion, cell migration, cell polarity, cell division, cancer, and development.
- Students will demonstrate the ability to generate hypothesis about how cell biological systems work at the molecular level and design experiments that test that hypothesis.
- Students will demonstrate competence in interpreting original raw data from cell biology experiments, including microscopy, protein biochemistry, molecular biology, and genetics strategies
- Students will demonstrate the ability to critically evaluate primary cell biology literature, including the ability to evaluate the design and interpretation of experimental data.

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes
- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

2. Complete the following chemistry and physics courses:

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes
- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

Course Outcomes
- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105

including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

Course Outcomes
- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes
- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

Course Outcomes
- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes
- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing

Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: High school algebra and trigonometry.
RECOMMENDED: Concurrent enrollment in Phscs 107.
DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes
There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 105 or equivalent.
RECOMMENDED: Concurrent enrollment in Phscs 108.
DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes
There are no course outcomes available

3. Complete the following major core courses:

PDBIO 325 : Tissue Biology (with lab). (3:2:3)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: PDBIO 120 & PDBIO 220
DESCRIPTION: Human anatomy and histology; function of cells in tissue; early stages of embryology.
NOTE: Course should be taken during a student's second or third year and before courses in physiology and developmental biology.

Course Outcomes
- Students will be able to communicate with health professionals effectively regarding tissue/organ anatomy and physiology in instances of health and disease.
- Students will demonstrate how the relationship between cell organization and cell function correlates with normal and pathological organ behavior.
- Students will be able to describe anatomical and physiological characteristics of epithelial, connective, nervous, and muscular tissue.

PDBIO 362 : Advanced Physiology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220
DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.
NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes
- Students will manifest an understanding of how structures at the molecular level lead to properties associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

PDBIO 363 : Advanced Physiology Laboratory. (1:.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: PDBio 362 or concurrent enrollment; or instructor's consent.
DESCRIPTION: Experiments and exercises in advanced physiology emphasizing human physiology. Computer simulations of muscle function, endocrine disease, and human physiology. Emphasizes problem solving and calculations.

Course Outcomes
- Students will demonstrate the skills required to properly interpret data from scientific experimentation to discover how physiological systems function.
- Students will manifest an understanding of basic physiological principles by modeling how human cells, organs, and organ systems function.
- Students will describe how interactions between human organ systems work to maintain homeostasis.

PDBIO 455R : Physiology and Developmental Biology Seminar. (.5:1:0)

WHEN TAUGHT: Fall; Winter
DESCRIPTION: Seminar (research) presentations for undergraduates in physiology and developmental biology.

Course Outcomes
- Students will be able to demonstrate the format, organization, and presentation of a typical scientific seminar.
- Students will demonstrate the proper etiquette of scientific interactions by participating in

question/answer periods following each seminar.

PDBIO 482 : Developmental Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PDBIO 360

RECOMMENDED: PDBio 325.

DESCRIPTION: Invertebrate and vertebrate developmental biology. Embryonic gastrulation, neurulation, pattering, etc. Modern approaches and research strategies. Emphasizes gene function, cell signaling, signal transduction during embryogenesis.

Course Outcomes

- Students will be able to generally describe the early development (from fertilization to axis formation) of one invertebrate and one vertebrate model organism.
- Students will be able to generally describe the concepts of cellular competence, induction, specification, commitment and differentiation in embryonic development.
- Students will be able to give two examples of organogenesis, including genes and signal transduction pathways that lead to organ system formation.
- Students will be able to explain embryonic patterning, using examples that include genes known to act in patterning events.
- Students will be able to explain at least two concepts in developmental biology that overlap with other sciences, such as stem cell research, cancer research, evolutionary sciences, or neuroscience.
- Students will be able to discern and summarize the current state of knowledge on a given topic, construct pioneering research questions on that topic, and propose experiments aimed at answering those questions.

4. Complete one course from the following:

PDBIO 210 : Human Anatomy (with virtual lab). (3:3:0)

OFFERED: Independent Study only.

DESCRIPTION: Structure and function of the human body. Virtual lab experience included.

Course Outcomes

- Students will be able to list the name, location, and function of each of the body's organs and organ systems.
- Students will demonstrate an understanding of the basic microscopic underpinnings of tissue structures and be able to name them.
- Students will demonstrate a greater understanding and appreciation for the human body, it's overall design and connections to other living organisms, and what a marvelous creation it is.

PDBIO 220 : Human Anatomy (with lab). (3:2:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Structure and function of the human body. Lab included.

Course Outcomes

- Students will demonstrate an understanding of the basic microscopic underpinnings of tissue structures and be able to name them.
- Students will demonstrate a greater understanding and appreciation for the human body, it's overall design and connections to other living organisms, and what a marvelous creation it is.
- Students will be able to list the name, location, and function of each of the body's organs and organ systems.

5. Complete one course from the following:

PDBIO 365 : Pathophysiology. (4:4:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 305; or PDBIO 362

DESCRIPTION: Variations in physiological mechanisms that account for development of common disturbances in normal control and activities of body's organs and organ systems.

Course Outcomes

- Students will exhibit an integrative understanding of the biochemistry, molecular biology, genetics, cell biology, microbiology, environmental biology, and physiology related to the prevention, development, and treatment of common diseases.
- Students will demonstrate through case study analysis a command of problem solving skills related to the diagnosis and treatment of pathophysiological conditions.
- Pupils will manifest a command of the physiology and pathophysiological vocabulary necessary to effectively communicate with other biomedical professionals and the general public.
- Students will be able to articulate the ethical issues related to the treatment and prevention of pathophysiological conditions.
- Students will manifest an increase in their respect for the human body and adopt a life style consistent with this respect.

PDBIO 484 : Human Embryology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PDBio 360 or equivalent.

RECOMMENDED: PDBio 325.

DESCRIPTION: Developmental milestones of prenatal life: etiology of congenital malformations, emphasizing molecular and cellular changes and their functional consequences.

Course Outcomes

- Students will identify the developmental trajectories of the various organ systems and why abnormalities

at any step in the lineage of organogenesis may cause birth defects.
- Students will be able to communicate with health professionals effectively regarding embryonic events from conception to birth and the ramifications of each event in instances of health and disease.
- Students will demonstrate how signaling between participating cells leads to important events during the first, second, third, and fourth weeks of development.

6. Complete one course from the following advanced molecular courses:

BIO 468 : (Bio-MMBio-PWS) Genomics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PWS 340

DESCRIPTION: Current analysis of genes and genomes; computational and statistical approaches for analyzing genomic data, including genome sequencing and annotation, gene expression and the transcriptome, proteomics and functional genomics, and genetic variation and SNPs.

Course Outcomes
- Students will complete a series of exercises with data representing genomic experiments (analysis and interpret).
- Students will describe how genomes are sequenced.
- Students will understand techniques and concepts to assess genomic features such as methylation, gene expression, etc.

CHEM 482 : Mechanisms of Molecular Biology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Second-semester biochemistry. Nucleic acid biochemistry and molecular biology: nucleotide metabolism, chromosome and chromatin structure, DNA structure and replication, RNA transcription and gene expression, protein synthesis and regulation, eukaryotic gene systems, signal transduction.

Course Outcomes
- Draw the structure of DNA, determine the topology of a plasmid, explain the chemical sequence of events that occur during DNA replication and draw structural changes that occur due to mutation.
- Determine how to perform and interpret an electrophoresis separation of DNA fragments, southern blot, restriction map, polymerase chain reaction, and a DNA sequencing reaction with necessary controls.
- Design a DNA cloning strategy, explain controls necessary, and write procedural plan.
- Draw and explain the mechanism of RNA transcription and how RNA is processed, spliced, and regulated. Understand the basic mechanisms of transcriptional regulation using the example of transcription of genes necessary for cholesterol synthesis.
- Determine when and how to use techniques that involve RNA: Northern blots, quantitative PCR, microarrays, S1 nuclease and primer extension mapping of the transcriptional start with appropriate controls.
- Determine the sequence of amino acids in a protein from a series of nucleotides.
- Draw and explain the process of protein translation and how it is regulated.
- Determine where a protein is localized in a tissue or cell: interpret a western blot, protein fusion assays.
- Determine with what a protein interacts: Interpret gel shift assays, Chromatin Immunoprecipitation, DNA footprinting, and yeast two hybrid reporter assays.
- Maintain faith through challenges and ethical boundaries in reporting and interpreting data.

CHEM 489 : Structural Biochemistry. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 468

DESCRIPTION: Molecular structures of proteins, RNA and DNA as determinants of biological function. Topics include thermodynamics of folding and binding, structural determination, spectroscopy, modeling, protein recognition.

Course Outcomes
- Identify motifs and symmetries in macromolecular structures and chemical interactions that maintain structural integrity
- Relate the structure of a macromolecule to its biological function
- Describe how X-ray crystallography, nuclear magnetic resonance, cryogenic electron microscopy, and circular dichroism techniques give structural information for biological macromolecules
- Communicate scientific ideas (e.g. structure-function relationships) clearly and concisely to others orally and in writing, and use ethical standards in oral and written presentations
- Work with peers to answer scientific questions

MMBIO 430 : Advanced Cell Biology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 360; Bioscience major status.

DESCRIPTION: Molecular genetics, cell biology, and developmental biology.

Course Outcomes
- Read primary literature to further their own understanding of the topic*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Explain the processes of cell biology*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Apply knowledge of these molecular processes to broader topics*Relates to Program Learning Outcome: Proficiency in formulating and carrying out independent and collaborative research projects.

- Analyze research data, design experiments and present data in a clear manner*Relates to Program Learning Outcome: Communication skills in presenting their research findings through effective oral and written presentations.

MMBIO 441 : Advanced Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & CHEM 352

DESCRIPTION: Molecular biology of gene structure and expression in prokaryotic and eukaryotic organisms.

Course Outcomes

- Learn molecular biology principles through study, lecture, and class discussion. An emphasis will be on understanding the experiments used to learn these principles.â ¨ *Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology preparing students for further education and/or employment.
- Apply the principles learned to design experiments and properly interpret experimental data.â ¨ *Relates to Program Learning Outcome: Proficiency in formulating research projects
- Present current research from the scientific literature.*Relates to Program Learning Outcomes: Communicate scientific information using oral methods; interpret, analyze and critique experiments from the primary scientific literature. Presenting research findings through effective oral and written presentations.
- Demonstrate integrity and ethical behavior during all class work.â ¨ *Relates to Program Learning Outcome: Commitment to professional integrity and ethical behavior consistent with the mission of the University.

7. Complete one course from the following capstone courses:

NEURO 480 : Advanced Neuroscience. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: NEURO 205; or PDBIO 362; PDBio 360; Neuroscience or PDBio major status.

DESCRIPTION: Principles of neural science. Structure-function relationships and integration of the nervous system.

Course Outcomes

There are no course outcomes available

PDBIO 498 : Advanced Senior Research Project. (3:Arr.:Arr.)

WHEN TAUGHT: Contact Department.

PREREQUISITE: PDBIO 494R & PDBIO 495R; Instructor's consent must be obtained during previous semester.

DESCRIPTION: Special project course for advanced PDBio research students. Engaging in scientific research as specified in an approved research proposal. Comprehensive written work of research required.

Course Outcomes

- Students will formulate a testable hypothesis relating to a topic in physiology and developmental biology .
- Students will design experiment (s) to test their hypothesis.
- Students will present a proposal describing their research topic, their hypothesis and experimental design.
- Students will independently carry out their proposed research.
- Students will analyze their experimental data.
- Students will report their findings in a manuscript intended for publication in a scientific journal.

PDBIO 561 : Physiology of Drug Mechanisms. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 362

DESCRIPTION: Overview of physiological and pharmacological mechanisms and principles of human therapeutics as applied to clinically significant pathophysiology.

Course Outcomes

- Students will manifest an interactive understanding of drug mechanisms at the molecular, cellular, tissue, organ, and/or systemic levels.
- Students will demonstrate that they understand the cellular pathways targeted for pharmacological treatment.
- Pupils will demonstrate a comprehension of how the body interacts with compounds used for pharmacological treatments.
- Students will manifest the knowledge, skills and vocabulary necessary to converse with health care providers concerning their own and family's medical treatments.

PDBIO 562 : Reproductive Physiology. (0-3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PDBio 362 or equivalent.

RECOMMENDED: Chem 481, PDBio 482; or equivalents.

DESCRIPTION: Mammalian reproductive physiology.

Course Outcomes

- Students will be expected to demonstrate acquisition of both the basic and in-depthknowledge needed to be able to perform the following skills on course assignments, quizzes, and examinations:1. Demonstrate understanding of various reproductive processes at the molecular,biochemical, microscopic, and physiological levels.2. Demonstrate the skills needed to read, analyze, evaluate,

comprehend, and synthesizescientific information from several different sources for use in both written and oralcommunication about various reproductive processes.3. Demonstrate an appreciation for the sacred nature of the reproductive processes thatresult in the production of offspring during in-class oral communication.

PDBIO 565 : Endocrinology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PDBio 362 or instructor's consent.

DESCRIPTION: Mammalian hormones.

Course Outcomes

- Students will be able to describe major actions of each hormone on target cells.
- Students will be able to describe pathways for synthesis, post-translational processing, and cellular localization or secretion for peptide hormones and hormone receptors.
- Students will be able to describe pathways for synthesis and inactivation for steroid hormones, thyroid hormones, and catecholamines.
- Students will be able to describe the control of synthesis and secretion for each hormone, including feedback relationships.
- Students will be able to describe major signaling pathways in target cells for each hormone.
- Students will be able to describe methodologies used to test hypotheses in study of problems in endocrinology.
- Students will be able to describe and recognize etiology and clinical symptoms of the major endocrine diseases

PDBIO 568 : Cellular Electrophysiology and Biophysics. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 362 & PHSCS 140; or PDBIO 362 & PHSCS 220

DESCRIPTION: Using electrophysiology and biophysics as an approach to study of physiology. Extensive look at ion channels and cell signaling.

Course Outcomes

- Students will demonstrate biophysical knowledge gained in specific areas including membrane properties, voltage and ligand-gated receptors, neurotransmission and mathematical modeling.
- Students will apply the biophysical knowledge gained in a laboratory setting.
- Students will demonstrate critical thinking and evaluation skills gained in the course by preparing a competent and clearly written research proposal.
- Students will demonstrate knowledge of a particular research topic and presentation skills in a clear and informative oral presentation.

PDBIO 582 : Developmental Genetics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PDBio 482 or equivalent.

DESCRIPTION: Gene function and regulation during cell specification and differentiation, pattern formation, and organogenesis in developing embryo.

Course Outcomes

- Students will demonstrate understanding of, and the ability to think critically about, primary developmental biology research articles.
- Students will demonstrate confidence in contributing to scientific discussions.
- Students will demonstrate the ability to think scientifically by formulating a research proposal.

8. Complete 6.5 hours from the following courses, including at least 1 hour from the mentored experience list and at least 2 hours from the advanced laboratory requirement list.
   a. Mentored experience:

PDBIO 349R : Physiology and Developmental Biology Teaching Seminar. (1-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: B or above in the specific physiology and developmental biology course; instructor's consent.

DESCRIPTION: Undergraduate students teaching small help sections for lecture portion of physiology and developomental biology courses or helping to teach departmental student laboratory.

Course Outcomes

- Students will develop a more in depth understanding of the subject material of a course by having the students teach the course material to other students.
- Students will develop a close professional relationship with the instructor for the course. The students should perceive that this individual is a mentor.
- Student instructors will increase oral communication skills for instruction by practicing laboratory materials with other undergraduate/graduate and/or mentoring faculty member(s).
- Student will receive constructive input from surveys that will be collected from laboratory sections and feedback provided by the graduate student and/or the mentoring faculty member.

PDBIO 494R : Undergraduate Research in Physiology and Developmental Biology. (1-4:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Basic (entry level) research laboratory experience for students interested in physiology and developmental biology.

Course Outcomes

- Students will demonstrate the ability to properly perform basic laboratory-specific techniques.
- Students will complete laboratory-specific safety training.

PDBIO 550R : Advanced Topics in Physiology and Developmental Biology. (.5-4:ARR:ARR)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Instructor's consent.

DESCRIPTION: Close interaction between small groups of students and instructor on topics in physiology, developmental biology, or biophysics. Topics vary.

Course Outcomes
- Students will prove they have an understanding of the scientific principles that underlie any techniques taught in the course.
- Students will master any experimental techniques taught in the course.
- Students will demonstrate an understanding of the specialized subject matter presented in the course.

b. Advanced laboratory experience (courses used to fill any requirements listed above cannot count for this requirement):

BIO 468 : (Bio-MMBio-PWS) Genomics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PWS 340

DESCRIPTION: Current analysis of genes and genomes; computational and statistical approaches for analyzing genomic data, including genome sequencing and annotation, gene expression and the transcriptome, proteomics and functional genomics, and genetic variation and SNPs.

Course Outcomes
- Students will complete a series of exercises with data representing genomic experiments (analysis and interpret).
- Students will describe how genomes are sequenced.
- Students will understand techniques and concepts to assess genomic features such as methylation, gene expression, etc.

CHEM 581 : Advanced Biochemical Methodology 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 482

DESCRIPTION: Analytical and structural determination methods used in biochemical research, including mass spectrometry-based proteomics, immunotechniques, atomic force and electron microscopy, NMR and X-ray diffraction.

NOTE: One of two required courses for biochemistry graduate students. May be taken before or after Chem 583.

Course Outcomes
- Understand the theory, instrumentation and applications of proteomic, immunological and structural methods currently used to address important biochemical questions.
- Interpret and critique data from these techniques.
- Design appropriate experiments and apply these techniques to their own research problems.
- Recognize important technological advances in proteomic, immunological and structural methods.
- Present findings from the primary literature describing the application of these methods to significant biochemical questions in a professional manner.

CHEM 583 : Advanced Biochemical Methodology 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 482

DESCRIPTION: Maintenance and expression of genetic information, the role of nucleic acids in biology at the chemical and structural level, and methods to study and control nucleic acid function as a means of solving biological problems.

NOTE: One of two required courses for biochemistry graduate students. May be taken before or after Chem 581.

Course Outcomes
- Describe how genetic information is stably maintained, how it is expressed, and how that expression is regulated, with an emphasis on the mechanism by which molecular machines perform these processes.
- Understand methods for studying the structure and function of nucleic acids and methods for manipulating gene expression in living systems.
- Interpret and critique data obtained using these methods as reported in the primary scientific literature.
- Communicate this understanding in both oral and written formats. [
- Design appropriate experiments and apply the techniques of nucleic acid biochemistry to their own research problems.

CHEM 584 : Biochemistry Laboratory/Proteins. (3:1:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Introduction to current biochemical research procedures including spectrophotometry, chromatography, electrophoresis, and immunological techniques. Protein over-expression;

isolation and characterization methods. Enzyme kinetics and protein-ligand interactions. Introduction to bioinformatics.

NOTE: May be taken before or after Chem 586.

Course Outcomes

- Apply spectroscopic techniques to analyze proteins, both their enzymatic and binding reactions
- Use gel electrophoresis and immunoblotting techniques to determine the presence and purity of proteins in biological samples
- Identify protein binding partners using co-immunoprecipitation methods
- Purify proteins using state-of-the-art separations methods
- Characterize an enzyme using steady state kinetics methods
- Use enzymes as analytical and diagnostic tools
- Properly record and interpret data
- Present data they have collected in an oral presentation and in a written scientific paper
- Understand ethical means of reporting results and giving proper credit to the work of others
- Measure ligand binding to proteins; determine dissociation constants and the degree of cooperativity.

CHEM 586 : Biochemistry Laboratory/Nucleic Acids. (3:1:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 482

DESCRIPTION: Laboratory course covering major techniques involved in isolation, amplification, and cloning of recombinant DNA as well as isolation, synthesis, translation, and identification of RNA.

NOTE: May be taken before or after Chem 584.

Course Outcomes

- Understand, design and execute experiments using basic DNA manipulation procedures that include isolation, purification and modification of DNA
- Explain and perform PCR amplification and use this technique to detect the presence of DNA “targets”, DNA cloning (subcloning) and DNA sequencing
- Understand and explain how to isolate, quantitate and manipulate RNA
- Design and perform experiments to reverse transcribe RNA into complementary DNA (cDNA) and assess gene expression by semi- and quantitative PCR
- Isolate total RNA and be able to purify mRNA from this material
- Introduce and express foreign DNA and/or RNA in mammalian cells using the techniques of electroporation, lipid-based transfection, calcium phosphate based transfection and retroviral transduction
- “Knockdown” an expressed gene in mammalian cells using RNA silencing
- Prepare laboratory notebooks that include the objective, results and methods of each laboratory experiment. Additionally, students will provide conclusions to each experiment, including when appropriate, potential explanations to unexpected results

MMBIO 442 : Advanced Molecular Biology Laboratory. (2:0:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 241; MMBio 441 or concurrent enrollment.

DESCRIPTION: Laboratory to accompany MMBio 441.

Course Outcomes

- Learn molecular biology laboratory techniques through hands-on experience. Techniques will include DNA and RNA isolation, PCR, microRNA isolation, northern blotting, RFLP analysis, site-directed mutagenisis, protein extraction and EMSA.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology
- Apply the techniques to design experiments with appropriate hypotheses and controls and properly interpret experimental data*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls
- Practice scientific communication and record-keeping through the completion of a laboratory notebook and answering written and oral questions and presentations.*Relates to Program Learning Outcome: Demonstrate Communication skills in presenting research findings through effective oral and written presentations.
- Design and carry out independent experiments*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls

PDBIO 399R : Academic Internship: Physiology and Developmental Biology. (1-9:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Consent of internship coordinator.

DESCRIPTION: On-the-job experience in off-campus laboratories with a focus related to physiology, biophysics, or developmental biology.

Course Outcomes

- Students will demonstrate research proficiency.
- Students will demonstrate that they have learned how to establish a research experience with an extramural provider.

PDBIO 495R : Advanced Undergraduate Research in Physiology and Developmental Biology. (1-4:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: 2 credit hours of PDBio 494R.

DESCRIPTION: Senior level research laboratory experience for majors in physiology and developmental biology.

Course Outcomes
- Students will demonstrate an understanding of hypothesis development and the design of experiments to test hypothesis.
- Students will independently carry out laboratory experiments.
- Students will analyze experimental data and, where appropriate, perform statistical analysis.

c. Elective courses (courses used to fill any requirements listed above cannot count for this requirement):

BIO 350 : Ecology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Distribution and abundance of organisms and their interactions with the physical and biotic components of the earth.

Course Outcomes
- Understand the major physical processes that form and characterize the biosphere, including global scale energy flow, the carbon cycle, climate, and soil formation.
- Understand the processes that drive major levels of organization of the biotic world, including energetics in the ecosystem, population dynamics, and species interactions.
- Understand the importance of writing as a way of synthesizing and solidifying critical thought.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Understand the importance of ecology to issues regarding human well-being
- See the connectivity and relevance of ecology to other fields of study

BIO 370 : Bioethics. (2:1:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Introductory biology course.

DESCRIPTION: In-depth lecture and small group discussion of varied bioethical issues. LDS Church positions emphasized when appropriate.

Course Outcomes
- Students will understand the ethical and philosophical underpinnings of bioethics and to develop ethical intuitions on bioethical issues.
- Students will learn the terminology, vocabulary, and objectives of bioethics.
- Students will understand the tools and approaches needed to make a bioethical decision and to communicate that decision in rationally informed ways.
- Students will understand the bioethical primary literature, to understand how to read case studies, and familiarity with the major issues being discussed in bioethics today.

BIO 421 : Evolutionary Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240

DESCRIPTION: Hands-on applications and analytical tools of evolutionary biology; emphasizing inference methodology and evidence complementing the theoretical constructs introduced in Bio 520, including comparative anatomy, phylogenetic inference, population genetics, species concepts, and human evolution.

NOTE: Concurrent enrollment with Bio 420 is strongly recommended.

Course Outcomes
- Students will gain a better understanding of the basic principles of evolution within a population including selection, drift, and founder effects by using computer simulations.
- Students will have a deeper understanding of the LDS position on evolution.
- Students will learn the details of phylogenetic reconstruction, tree searching, DNA sequence alignment, and other bioinformatics tools for deciphering patterns of evolution.
- Students will learn the details of species concepts and the criteria used for identifying and diagnosing species.
- Students will gain hands-on experience with hominid fossils and gain an understanding of the evidence that elucidates the biological history of humans.

BIO 463 : Genetics of Human Disease. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 340

DESCRIPTION: Examining the application of genetics to understanding and treatment of human disease. Functional consequences of mutations; use of model organisms; linkage and association analysis of complex traits; pharmacogenetics; ethical considerations.

Course Outcomes
- Understand and explain the different types of genetic variants, how they can be typed and how they can be used to understand the genetic architecture of human disease.
- Understand linkage disequilibrium in the human genome and the role it plays in the search for genetic risk factors for human disease
- Understand and use basic statistics and software for analyzing the correlation between genetic markers and risk for disease.
- Understand and explain how model organisms contribute to our understanding of the genetics of human disease.
- Demonstrate the ability to obtain, aggregate and present information about the current knowledge of the genetics of a human disease.

BIO 468 : (Bio-MMBio-PWS) Genomics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PWS 340

DESCRIPTION: Current analysis of genes and genomes; computational and statistical approaches for analyzing genomic data, including genome sequencing and annotation, gene expression and the transcriptome, proteomics and functional genomics, and genetic variation and SNPs.

Course Outcomes

- Students will complete a series of exercises with data representing genomic experiments (analysis and interpret).
- Students will describe how genomes are sequenced.
- Students will understand techniques and concepts to assess genomic features such as methylation, gene expression, etc.

CHEM 482 : Mechanisms of Molecular Biology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Second-semester biochemistry. Nucleic acid biochemistry and molecular biology: nucleotide metabolism, chromosome and chromatin structure, DNA structure and replication, RNA transcription and gene expression, protein synthesis and regulation, eukaryotic gene systems, signal transduction.

Course Outcomes

- Draw the structure of DNA, determine the topology of a plasmid, explain the chemical sequence of events that occur during DNA replication and draw structural changes that occur due to mutation.
- Determine how to perform and interpret an electrophoresis separation of DNA fragments, southern blot, restriction map, polymerase chain reaction, and a DNA sequencing reaction with necessary controls.
- Design a DNA cloning strategy, explain controls necessary, and write procedural plan.
- Draw and explain the mechanism of RNA transcription and how RNA is processed, spliced, and regulated. Understand the basic mechanisms of transcriptional regulation using the example of transcription of genes necessary for cholesterol synthesis.
- Determine when and how to use techniques that involve RNA: Northern blots, quantitative PCR, microarrays, S1 nuclease and primer extension mapping of the transcriptional start with appropriate controls.
- Determine the sequence of amino acids in a protein from a series of nucleotides.
- Draw and explain the process of protein translation and how it is regulated.
- Determine where a protein is localized in a tissue or cell: interpret a western blot, protein fusion assays.
- Determine with what a protein interacts: Interpret gel shift assays, Chromatin Immunoprecipitation, DNA footprinting, and yeast two hybrid reporter assays.
- Maintain faith through challenges and ethical boundaries in reporting and interpreting data.

CHEM 489 : Structural Biochemistry. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 468

DESCRIPTION: Molecular structures of proteins, RNA and DNA as determinants of biological function. Topics include thermodynamics of folding and binding, structural determination, spectroscopy, modeling, protein recognition.

Course Outcomes

- Identify motifs and symmetries in macromolecular structures and chemical interactions that maintain structural integrity
- Relate the structure of a macromolecule to its biological function
- Describe how X-ray crystallography, nuclear magnetic resonance, cryogenic electron microscopy, and circular dichroism techniques give structural information for biological macromolecules
- Communicate scientific ideas (e.g. structure-function relationships) clearly and concisely to others orally and in writing, and use ethical standards in oral and written presentations
- Work with peers to answer scientific questions

CHEM 581 : Advanced Biochemical Methodology 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 482

DESCRIPTION: Analytical and structural determination methods used in biochemical research, including mass spectrometry-based proteomics, immunotechniques, atomic force and electron microscopy, NMR and X-ray diffraction.

NOTE: One of two required courses for biochemistry graduate students. May be taken before or after Chem 583.

Course Outcomes

- Understand the theory, instrumentation and applications of proteomic, immunological and structural methods currently used to address important biochemical questions.
- Interpret and critique data from these techniques.
- Design appropriate experiments and apply these techniques to their own research problems.
- Recognize important technological advances in proteomic, immunological and structural methods.
- Present findings from the primary literature describing the application of these methods to significant biochemical questions in a professional manner.

CHEM 583 : Advanced Biochemical Methodology 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 482

DESCRIPTION: Maintenance and expression of genetic information, the role of nucleic acids in biology at the chemical and structural level, and methods to study and control nucleic acid function as a means of solving biological problems.

NOTE: One of two required courses for biochemistry graduate students. May be taken before or after Chem 581.

Course Outcomes

- Describe how genetic information is stably maintained, how it is expressed, and how that expression is regulated, with an emphasis on the mechanism by which molecular machines perform these processes.
- Understand methods for studying the structure and function of nucleic acids and methods for manipulating gene expression in living systems.
- Interpret and critique data obtained using these methods as reported in the primary scientific literature.
- Communicate this understanding in both oral and written formats. [
- Design appropriate experiments and apply the techniques of nucleic acid biochemistry to their own research problems.

CHEM 584 : Biochemistry Laboratory/Proteins. (3:1:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Introduction to current biochemical research procedures including spectrophotometry, chromatography, electrophoresis, and immunological techniques. Protein over-expression; isolation and characterization methods. Enzyme kinetics and protein-ligand interactions. Introduction to bioinformatics.

NOTE: May be taken before or after Chem 586.

Course Outcomes

- Apply spectroscopic techniques to analyze proteins, both their enzymatic and binding reactions
- Use gel electrophoresis and immunoblotting techniques to determine the presence and purity of proteins in biological samples
- Identify protein binding partners using co-immunoprecipitation methods
- Purify proteins using state-of-the-art separations methods
- Characterize an enzyme using steady state kinetics methods
- Use enzymes as analytical and diagnostic tools
- Properly record and interpret data
- Present data they have collected in an oral presentation and in a written scientific paper
- Understand ethical means of reporting results and giving proper credit to the work of others
- Measure ligand binding to proteins; determine dissociation constants and the degree of cooperativity.

CHEM 586 : Biochemistry Laboratory/Nucleic Acids. (3:1:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 482

DESCRIPTION: Laboratory course covering major techniques involved in isolation, amplification, and cloning of recombinant DNA as well as isolation, synthesis, translation, and identification of RNA.

NOTE: May be taken before or after Chem 584.

Course Outcomes

- Understand, design and execute experiments using basic DNA manipulation procedures that include isolation, purification and modification of DNA
- Explain and perform PCR amplification and use this technique to detect the presence of DNA “targets”, DNA cloning (subcloning) and DNA sequencing
- Understand and explain how to isolate, quantitate and manipulate RNA
- Design and perform experiments to reverse transcribe RNA into complementary DNA (cDNA) and assess gene expression by semi- and quantitative PCR
- Isolate total RNA and be able to purify mRNA from this material
- Introduce and express foreign DNA and/or RNA in mammalian cells using the techniques of electroporation, lipid-based transfection, calcium phosphate based transfection and retroviral transduction
- “Knockdown” an expressed gene in mammalian cells using RNA silencing
- Prepare laboratory notebooks that include the objective, results and methods of each laboratory experiment. Additionally, students will provide conclusions to each experiment, including when appropriate, potential explanations to unexpected results

EXSC 463 : Exercise Physiology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: PDBIO 305; or PDBIO 362

RECOMMENDED: Concurrent enrollment in ExSc 464.

DESCRIPTION: The function of the physiological systems and their responses to acute and chronic exercise.

Course Outcomes

- Describe the substrates used, amount and rate of ATP resynthesized, metabolic end products, and control of anaerobic and aerobic metabolic pathways.
- Describe the responses to acute bouts of exercise and the mechanisms of the observed response, and the physiological adaptations which occur as a result of physical conditioning.
- Describe the physiological rationale for applying the eight principles of physical conditioning to

improve health, fitness, and performance.
- Describe the depolarization of skeletal muscle beginning at the spinal cord and ending with the contraction of the muscle fiber.
- Describe the transportation and diffusion of O2and CO2 through the pulmonary and systemic circuits at rest and during exercise.
- Describe the anatomical, physiological, and functional differences between the three types of huma skeletal muscle fibers.
- Describe the interaction of the nervous, muscle, cardiovascular, pulmonary, and metabolic systems at rest and during exercise.
- Describe the normal anatomy and physiology of the heart, blood, and blood vessels; describe the normal function of the cardiovascular system at rest and during exercise.
- Describe how the human body functions and maintain homeostasis during the increased metabolic demands of exercise.
- Describe the function of sympathetic, parasympathetic, and somatic motor neurons, including differences in structure, neurotransmitters, receptors and efferent organs.

EXSC 464 : Exercise Physiology Lab. (.5:0:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: ExSc 463 or concurrent enrollment.

DESCRIPTION: Introduction of laboratory and field methods; applying principles of exercise physiology to assessing physical fitness and physiological responses to exercise.

Course Outcomes
- The purpose of this class is to apply knowledge of exercise physiology to the assessment of the fivecomponents of health related physical fitness. The labs are the means to review and apply the physiologyof exercise and to develop and practice fundamental skills related to the assessment of physical fitness.

MMBIO 261 : Infection and Immunity. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Principles of infectious organisms (principally bacteria and viruses), the diseases they cause, and the role of host immune responses in health and disease.

Course Outcomes
There are no course outcomes available

MMBIO 417 : Medical Parasitology. (3:2:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Bio 100 or equivalent.

DESCRIPTION: Pathogenesis, diagnosis, and epidemiology of human parasitic diseases. Laboratory included.

Course Outcomes
- Gain familiarity with the medically important parasites. This includes understanding parasite host range as well as pathology and mechanisms of pathogenesis.*Relates to Program Learning Outcome: Exhibit mastery of medical microbiology
- Be able to design experiments, with appropriate controls, to test various hypotheses in parasitology.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Read and critically interpret current scientific literature in the field of parasitology.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Students should gain an understanding of their role and responsibility in alleviating suffering caused by parasitic diseases.*Relates to Program Learning Outcome: Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological principles.

MMBIO 430 : Advanced Cell Biology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 360; Bioscience major status.

DESCRIPTION: Molecular genetics, cell biology, and developmental biology.

Course Outcomes
- Read primary literature to further their own understanding of the topic*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Explain the processes of cell biology*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Apply knowledge of these molecular processes to broader topics*Relates to Program Learning Outcome: Proficiency in formulating and carrying out independent and collaborative research projects.
- Analyze research data, design experiments and present data in a clear manner*Relates to Program Learning Outcome: Communication skills in presenting their research findings through effective oral and written presentations.

MMBIO 441 : Advanced Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & CHEM 352
DESCRIPTION: Molecular biology of gene structure and expression in prokaryotic and eukaryotic organisms.

Course Outcomes
- Learn molecular biology principles through study, lecture, and class discussion. An emphasis will be on understanding the experiments used to learn these principles.â ¨ *Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology preparing students for further education and/or employment.
- Apply the principles learned to design experiments and properly interpret experimental data.â ¨ *Relates to Program Learning Outcome: Proficiency in formulating research projects
- Present current research from the scientific literature.*Relates to Program Learning Outcomes: Communicate scientific information using oral methods; interpret, analyze and critique experiments from the primary scientific literature. Presenting research findings through effective oral and written presentations.
- Demonstrate integrity and ethical behavior during all class work.â ¨ *Relates to Program Learning Outcome: Commitment to professional integrity and ethical behavior consistent with the mission of the University.

MMBIO 442 : Advanced Molecular Biology Laboratory. (2:0:6)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: MMBIO 241; MMBio 441 or concurrent enrollment.
DESCRIPTION: Laboratory to accompany MMBio 441.

Course Outcomes
- Learn molecular biology laboratory techniques through hands-on experience. Techniques will include DNA and RNA isolation, PCR, microRNA isolation, northern blotting, RFLP analysis, site-directed mutagenisis, protein extraction and EMSA.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology
- Apply the techniques to design experiments with appropriate hypotheses and controls and properly interpret experimental data*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls
- Practice scientific communication and record-keeping through the completion of a laboratory notebook and answering written and oral questions and presentations.*Relates to Program Learning Outcome: Demonstrate Communication skills in presenting research findings through effective oral and written presentations.
- Design and carry out independent experiments*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls

NDFS 200 : Nutrient Metabolism. (3:3:0)
WHEN TAUGHT: Fall; Spring
PREREQUISITE: NDFS 100; Organic chemistry or concurrent enrollment.
DESCRIPTION: Chemical structures of nutrients, their food sources, requirements, digestion, absorption, transport, metabolism, functions, storage and excretion; metabolic consequences of nutrient deficiencies, interactions, imbalances, and toxicities.

Course Outcomes
- Identify chemical structures of amino acids, lipids, carbohydrates, and vitamins.
- List functions, food sources, and consequences of deficiencies and toxicities for each of the essential nutrients.
- Explain the metabolic and physiological basis for the consequences of dietary practices that affect nutrient levels, and relate the consequences to the roles of essential nutrients in metabolic processes.
- Analyze diets and alter food intake to reach predetermined targets for consumption of specific dietary components or to achieve an overall dietary pattern.
- Find answers to questions and summarize results from original research reported in published peer-reviewed scientific journals.

NEURO 480 : Advanced Neuroscience. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: NEURO 205; or PDBIO 362; PDBio 360; Neuroscience or PDBio major status.
DESCRIPTION: Principles of neural science. Structure-function relationships and integration of the nervous system.

Course Outcomes
There are no course outcomes available

PDBIO 320 : Dissection Techniques in Human Anatomy. (1:0:3)
WHEN TAUGHT: Contact Department.
PREREQUISITE: PDBIO 220
DESCRIPTION: Techniques of human cadaver dissection.

Course Outcomes
- Students will demonstrate they understand the composition of the human body through successfully completing various dissection assignments on human cadavers.
- Students will manifest an increases preparation at both a spiritual and secular level, for professional training in the field of human health.

PDBIO 365 : Pathophysiology. (4:4:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 305; or PDBIO 362

DESCRIPTION: Variations in physiological mechanisms that account for development of common disturbances in normal control and activities of body's organs and organ systems.

Course Outcomes

- Students will exhibit an integrative understanding of the biochemistry, molecular biology, genetics, cell biology, microbiology, environmental biology, and physiology related to the prevention, development, and treatment of common diseases.
- Students will demonstrate through case study analysis a command of problem solving skills related to the diagnosis and treatment of pathophysiological conditions.
- Pupils will manifest a command of the physiology and pathophysiological vocabulary necessary to effectively communicate with other biomedical professionals and the general public.
- Students will be able to articulate the ethical issues related to the treatment and prevention of pathophysiological conditions.
- Students will manifest an increase in their respect for the human body and adopt a life style consistent with this respect.

PDBIO 450R : Topics in Physiology and Developmental Biology. (1-3:ARR:ARR)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Close interaction between small groups of students and instructor on topics in physiology, developmental biology, or biophysics. Topics vary.

Course Outcomes

- Students will demonstrate an understanding of the scientific principles that underlie the techniques taught in the course.
- Students will perform effectively any experimental techniques taught in the course.
- Pupils will demonstrate an understanding of the specialized subject matter presented in the course.

PDBIO 455R : Physiology and Developmental Biology Seminar. (.5:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Seminar (research) presentations for undergraduates in physiology and developmental biology.

Course Outcomes

- Students will be able to demonstrate the format, organization, and presentation of a typical scientific seminar.
- Students will demonstrate the proper etiquette of scientific interactions by participating in question/answer periods following each seminar.

PDBIO 484 : Human Embryology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PDBio 360 or equivalent.

RECOMMENDED: PDBio 325.

DESCRIPTION: Developmental milestones of prenatal life: etiology of congenital malformations, emphasizing molecular and cellular changes and their functional consequences.

Course Outcomes

- Students will identify the developmental trajectories of the various organ systems and why abnormalities at any step in the lineage of organogenesis may cause birth defects.
- Students will be able to communicate with health professionals effectively regarding embryonic events from conception to birth and the ramifications of each event in instances of health and disease.
- Students will demonstrate how signaling between participating cells leads to important events during the first, second, third, and fourth weeks of development.

PDBIO 498 : Advanced Senior Research Project. (3:Arr.:Arr.)

WHEN TAUGHT: Contact Department.

PREREQUISITE: PDBIO 494R & PDBIO 495R; Instructor's consent must be obtained during previous semester.

DESCRIPTION: Special project course for advanced PDBio research students. Engaging in scientific research as specified in an approved research proposal. Comprehensive written work of research required.

Course Outcomes

- Students will formulate a testable hypothesis relating to a topic in physiology and developmental biology .
- Students will design experiment (s) to test their hypothesis.
- Students will present a proposal describing their research topic, their hypothesis and experimental design.
- Students will independently carry out their proposed research.
- Students will analyze their experimental data.
- Students will report their findings in a manuscript intended for publication in a scientific journal.

PDBIO 561 : Physiology of Drug Mechanisms. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 362
DESCRIPTION: Overview of physiological and pharmacological mechanisms and principles of human therapeutics as applied to clinically significant pathophysiology.

Course Outcomes
- Students will manifest an interactive understanding of drug mechanisms at the molecular, cellular, tissue, organ, and/or systemic levels.
- Students will demonstrate that they understand the cellular pathways targeted for pharmacological treatment.
- Pupils will demonstrate a comprehension of how the body interacts with compounds used for pharmacological treatments.
- Students will manifest the knowledge, skills and vocabulary necessary to converse with health care providers concerning their own and family's medical treatments.

PDBIO 562 : Reproductive Physiology. (0-3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: PDBio 362 or equivalent.
RECOMMENDED: Chem 481, PDBio 482; or equivalents.
DESCRIPTION: Mammalian reproductive physiology.

Course Outcomes
- Students will be expected to demonstrate acquisition of both the basic and in-depthknowledge needed to be able to perform the following skills on course assignments, quizzes, and examinations:1. Demonstrate understanding of various reproductive processes at the molecular,biochemical, microscopic, and physiological levels.2. Demonstrate the skills needed to read, analyze, evaluate, comprehend, and synthesizescientific information from several different sources for use in both written and oralcommunication about various reproductive processes.3. Demonstrate an appreciation for the sacred nature of the reproductive processes thatresult in the production of offspring during in-class oral communication.

PDBIO 565 : Endocrinology. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: PDBio 362 or instructor's consent.
DESCRIPTION: Mammalian hormones.

Course Outcomes
- Students will be able to describe major actions of each hormone on target cells.
- Students will be able to describe pathways for synthesis, post-translational processing, and cellular localization or secretion for peptide hormones and hormone receptors.
- Students will be able to describe pathways for synthesis and inactivation for steroid hormones, thyroid hormones, and catecholamines.
- Students will be able to describe the control of synthesis and secretion for each hormone, including feedback relationships.
- Students will be able to describe major signaling pathways in target cells for each hormone.
- Students will be able to describe methodologies used to test hypotheses in study of problems in endocrinology.
- Students will be able to describe and recognize etiology and clinical symptoms of the major endocrine diseases

PDBIO 568 : Cellular Electrophysiology and Biophysics. (3:2:3)
WHEN TAUGHT: Fall
PREREQUISITE: PDBIO 362 & PHSCS 140; or PDBIO 362 & PHSCS 220
DESCRIPTION: Using electrophysiology and biophysics as an approach to study of physiology. Extensive look at ion channels and cell signaling.

Course Outcomes
- Students will demonstrate biophysical knowledge gained in specific areas including membrane properties, voltage and ligand-gated receptors, neurotransmission and mathematical modeling.
- Students will apply the biophysical knowledge gained in a laboratory setting.
- Students will demonstrate critical thinking and evaluation skills gained in the course by preparing a competent and clearly written research proposal.
- Students will demonstrate knowledge of a particular research topic and presentation skills in a clear and informative oral presentation.

PDBIO 582 : Developmental Genetics. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: PDBio 482 or equivalent.
DESCRIPTION: Gene function and regulation during cell specification and differentiation, pattern formation, and organogenesis in developing embryo.

Course Outcomes
- Students will demonstrate understanding of, and the ability to think critically about, primary developmental biology research articles.
- Students will demonstrate confidence in contributing to scientific discussions.
- Students will demonstrate the ability to think scientifically by formulating a research proposal.

Recommended Courses

Professional schools and graduate programs may require additional courses not required for this major, such as Phscs 107, 108, Chem, calculus, or statistics. Contact the programs to which you may apply to determine the specific courses required.

Students considering professional or graduate degrees should take at least two semesters of mathematical courses. The recommended sequences are:

1. Math 112, Stat 121 for students who want exposure to calculus and statistics.
2. Math 112, 113 for students who want a firm foundation in calculus.
3. Math 112, 113, Stat 121 for students who want a firm foundation in both calculus and statistics.

*Hours include courses that may fulfill university core requirements.

Undergraduate Courses

100-Level Courses

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also
WHEN TAUGHT: Fall; Winter; Summer
DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes
There are no course outcomes available

200-Level Courses

PDBIO 205 : Human Biology. (3:3:0)

OFFERED: Independent Study online course.
DESCRIPTION: Body systems and influence of heredity.
NOTE: For nonbiology majors. Currently offered online only.

Course Outcomes
- Demonstrate understanding of the anatomic and physiologic terminology necessary forwritten and oral communication about the body, its functions, and its interaction with allother species on this planet.
- Students will demonstrate understanding of human biology at the chemical, microscopic,anatomical, physiological, and ecological levels.
- Demonstrate the ability to connect understanding of the body and its function with thefunction and survival of the world we live in.

PDBIO 210 : Human Anatomy (with virtual lab). (3:3:0)

OFFERED: Independent Study only.
DESCRIPTION: Structure and function of the human body. Virtual lab experience included.

Course Outcomes
- Students will be able to list the name, location, and function of each of the body's organs and organ systems.
- Students will demonstrate an understanding of the basic microscopic underpinnings of tissue structures and be able to name them.
- Students will demonstrate a greater understanding and appreciation for the human body, it's overall design and connections to other living organisms, and what a marvelous creation it is.

PDBIO 220 : Human Anatomy (with lab). (3:2:2)

WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Structure and function of the human body. Lab included.

Course Outcomes
- Students will demonstrate an understanding of the basic microscopic underpinnings of tissue structures and be able to name them.
- Students will demonstrate a greater understanding and appreciation for the human body, it's overall design and connections to other living organisms, and what a marvelous creation it is.
- Students will be able to list the name, location, and function of each of the body's organs and organ systems.

300-Level Courses

PDBIO 305 : Human Physiology (with lab). (4:4:2)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Chem 101 or equivalent.
RECOMMENDED: A general biology course.
DESCRIPTION: Function of body organ systems.

NOTE: Not acceptable for physiology and developmental biology, biophysics, or neuroscience majors. Designed for students with basic chemistry / no molecular biology. Students with chemistry/molecular biology should take PDBio 362.

Course Outcomes
- Students will demonstrate the proper use of physiology terminology.
- Student will demonstrate a well-integrated and comprehensive understanding of the human body in health and disease.
- Students will use knowledge of cells and organ systems to solve problems related to the function of the human body.
- Students will demonstrate the necessary knowledge and skills in physiology that are required for their majors and future aspirations for graduate and professional school.
- Students will develop and demonstrate in their daily lives a deeper appreciation and respect for the human body.
- Students will demonstrate the knowledge to make informed personal (medical,ethical,and political)decisions regarding physiological concepts.

PDBIO 320 : Dissection Techniques in Human Anatomy. (1:0:3)

WHEN TAUGHT: Contact Department.

PREREQUISITE: PDBIO 220

DESCRIPTION: Techniques of human cadaver dissection.

Course Outcomes
- Students will demonstrate they understand the composition of the human body through successfully completing various dissection assignments on human cadavers.
- Students will manifest an increases preparation at both a spiritual and secular level, for professional training in the field of human health.

PDBIO 325 : Tissue Biology (with lab). (3:2:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120 & PDBIO 220

DESCRIPTION: Human anatomy and histology; function of cells in tissue; early stages of embryology.

NOTE: Course should be taken during a student's second or third year and before courses in physiology and developmental biology.

Course Outcomes
- Students will be able to communicate with health professionals effectively regarding tissue/organ anatomy and physiology in instances of health and disease.
- Students will demonstrate how the relationship between cell organization and cell function correlates with normal and pathological organ behavior.
- Students will be able to describe anatomical and physiological characteristics of epithelial, connective, nervous, and muscular tissue.

PDBIO 349R : Physiology and Developmental Biology Teaching Seminar. (1-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: B or above in the specific physiology and developmental biology course; instructor's consent.

DESCRIPTION: Undergraduate students teaching small help sections for lecture portion of physiology and developomental biology courses or helping to teach departmental student laboratory.

Course Outcomes
- Students will develop a more in depth understanding of the subject material of a course by having the students teach the course material to other students.
- Students will develop a close professional relationship with the instructor for the course. The students should perceive that this individual is a mentor.
- Student instructors will increase oral communication skills for instruction by practicing laboratory materials with other undergraduate/graduate and/or mentoring faculty member(s).
- Student will receive constructive input from surveys that will be collected from laboratory sections and feedback provided by the graduate student and/or the mentoring faculty member.

PDBIO 360 : Cell Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Fundamentals of cell structure and function with reference to analytical methods used by cell biologists. Practice in designing, executing, and interpreting relative experiments.

Course Outcomes
- Students will demonstrate knowledge of the molecular architecture of the nucleus, including the nuclear envelope, nucleoplasm and nucleolus, chromatin, and the nuclear pore.
- Students will demonstrate an understanding of protein transport, including nuclear import and export and vesicular transport through the secretory and sorting pathways.
- Students will demonstrate knowledge of the molecular and cellular structure and dynamics of cytoskeletal systems.
- Students will be able to apply the basic cell biological principles in outcomes 1-3 to more complicated cellular processes, including cell adhesion, cell migration, cell polarity, cell division, cancer, and development.
- Students will demonstrate the ability to generate hypothesis about how cell biological systems work at the molecular level and design experiments that test that hypothesis.
- Students will demonstrate competence in interpreting original raw data from cell biology experiments, including microscopy, protein biochemistry, molecular biology, and genetics strategies
- Students will demonstrate the ability to critically evaluate primary cell biology literature, including the ability to evaluate the design and interpretation of experimental data.

PDBIO 362 : Advanced Physiology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220

DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.

NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes

- Students will manifest an understanding of how structures at the molecular level lead to properties associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

PDBIO 363 : Advanced Physiology Laboratory. (1:.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 362 or concurrent enrollment; or instructor's consent.

DESCRIPTION: Experiments and exercises in advanced physiology emphasizing human physiology. Computer simulations of muscle function, endocrine disease, and human physiology. Emphasizes problem solving and calculations.

Course Outcomes

- Students will demonstrate the skills required to properly interpret data from scientific experimentation to discover how physiological systems function.
- Students will manifest an understanding of basic physiological principles by modeling how human cells, organs, and organ systems function.
- Students will describe how interactions between human organ systems work to maintain homeostasis.

PDBIO 365 : Pathophysiology. (4:4:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 305; or PDBIO 362

DESCRIPTION: Variations in physiological mechanisms that account for development of common disturbances in normal control and activities of body's organs and organ systems.

Course Outcomes

- Students will exhibit an integrative understanding of the biochemistry, molecular biology, genetics, cell biology, microbiology, environmental biology, and physiology related to the prevention, development, and treatment of common diseases.
- Students will demonstrate through case study analysis a command of problem solving skills related to the diagnosis and treatment of pathophysiological conditions.
- Pupils will manifest a command of the physiology and pathophysiological vocabulary necessary to effectively communicate with other biomedical professionals and the general public.
- Students will be able to articulate the ethical issues related to the treatment and prevention of pathophysiological conditions.
- Students will manifest an increase in their respect for the human body and adopt a life style consistent with this respect.

PDBIO 399R : Academic Internship: Physiology and Developmental Biology. (1-9:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Consent of internship coordinator.

DESCRIPTION: On-the-job experience in off-campus laboratories with a focus related to physiology, biophysics, or developmental biology.

Course Outcomes

- Students will demonstrate research proficiency.
- Students will demonstrate that they have learned how to establish a research experience with an extramural provider.

400-Level Courses

PDBIO 450R : Topics in Physiology and Developmental Biology. (1-3:ARR:ARR)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Close interaction between small groups of students and instructor on topics in physiology, developmental biology, or biophysics. Topics vary.

Course Outcomes

- Students will demonstrate an understanding of the scientific principles that underlie the techniques taught in the course.
- Students will perform effectively any experimental techniques taught in the course.
- Pupils will demonstrate an understanding of the specialized subject matter presented in the course.

PDBIO 455R : Physiology and Developmental Biology Seminar. (.5:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Seminar (research) presentations for undergraduates in physiology and developmental biology.

Course Outcomes

- Students will be able to demonstrate the format, organization, and presentation of a typical scientific seminar.

Students will demonstrate the proper etiquette of scientific interactions by participating in question/answer periods following each seminar.

PDBIO 482 : Developmental Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PDBIO 360

RECOMMENDED: PDBio 325.

DESCRIPTION: Invertebrate and vertebrate developmental biology. Embryonic gastrulation, neurulation, pattering, etc. Modern approaches and research strategies. Emphasizes gene function, cell signaling, signal transduction during embryogenesis.

Course Outcomes

- Students will be able to generally describe the early development (from fertilization to axis formation) of one invertebrate and one vertebrate model organism.
- Students will be able to generally describe the concepts of cellular competence, induction, specification, commitment and differentiation in embryonic development.
- Students will be able to give two examples of organogenesis, including genes and signal transduction pathways that lead to organ system formation.
- Students will be able to explain embryonic patterning, using examples that include genes known to act in patterning events.
- Students will be able to explain at least two concepts in developmental biology that overlap with other sciences, such as stem cell research, cancer research, evolutionary sciences, or neuroscience.
- Students will be able to discern and summarize the current state of knowledge on a given topic, construct pioneering research questions on that topic, and propose experiments aimed at answering those questions.

PDBIO 484 : Human Embryology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PDBio 360 or equivalent.

RECOMMENDED: PDBio 325.

DESCRIPTION: Developmental milestones of prenatal life: etiology of congenital malformations, emphasizing molecular and cellular changes and their functional consequences.

Course Outcomes

- Students will identify the developmental trajectories of the various organ systems and why abnormalities at any step in the lineage of organogenesis may cause birth defects.
- Students will be able to communicate with health professionals effectively regarding embryonic events from conception to birth and the ramifications of each event in instances of health and disease.
- Students will demonstrate how signaling between participating cells leads to important events during the first, second, third, and fourth weeks of development.

PDBIO 494R : Undergraduate Research in Physiology and Developmental Biology. (1-4:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Basic (entry level) research laboratory experience for students interested in physiology and developmental biology.

Course Outcomes

- Students will demonstrate the ability to properly perform basic laboratory-specific techniques.
- Students will complete laboratory-specific safety training.

PDBIO 495R : Advanced Undergraduate Research in Physiology and Developmental Biology. (1-4:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: 2 credit hours of PDBio 494R.

DESCRIPTION: Senior level research laboratory experience for majors in physiology and developmental biology.

Course Outcomes

- Students will demonstrate an understanding of hypothesis development and the design of experiments to test hypothesis.
- Students will independently carry out laboratory experiments.
- Students will analyze experimental data and, where appropriate, perform statistical analysis.

PDBIO 498 : Advanced Senior Research Project. (3:Arr.:Arr.)

WHEN TAUGHT: Contact Department.

PREREQUISITE: PDBIO 494R & PDBIO 495R; Instructor's consent must be obtained during previous semester.

DESCRIPTION: Special project course for advanced PDBio research students. Engaging in scientific research as specified in an approved research proposal. Comprehensive written work of research required.

Course Outcomes

- Students will formulate a testable hypothesis relating to a topic in physiology and developmental biology .
- Students will design experiment (s) to test their hypothesis.
- Students will present a proposal describing their research topic, their hypothesis and experimental design.
- Students will independently carry out their proposed research.
- Students will analyze their experimental data.
- Students will report their findings in a manuscript intended for publication in a scientific journal.

PDBIO 499R : Senior Honors Thesis. (1-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Honors thesis. Topic to be cleared with Honors Program and Physiology and Developmental Biology Department.

Course Outcomes

Students will be expected to demonstrate acquisition of the necessary laboratory,analytical, and writing skills needed to:1. Successfully generate, analyze, and write about the scientific data they have collected.2. Demonstrate an understanding of the information previously published in the scientificliterature in order to write about their research efforts in the context of what is known andunderstood on their chosen thesis topic.3. Combine their skills, abilities, and efforts in both of the above areas sufficient togenerate a thesis acceptable to meet the requirements for graduation with honors.

500-Level Graduate Courses (available to advanced undergraduates)

PDBIO 550R : Advanced Topics in Physiology and Developmental Biology. (.5-4:ARR:ARR)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Instructor's consent.

DESCRIPTION: Close interaction between small groups of students and instructor on topics in physiology, developmental biology, or biophysics. Topics vary.

Course Outcomes

- Students will prove they have an understanding of the scientific principles that underlie any techniques taught in the course.
- Students will master any experimental techniques taught in the course.
- Students will demonstrate an understanding of the specialized subject matter presented in the course.

PDBIO 561 : Physiology of Drug Mechanisms. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 362

DESCRIPTION: Overview of physiological and pharmacological mechanisms and principles of human therapeutics as applied to clinically significant pathophysiology.

Course Outcomes

- Students will manifest an interactive understanding of drug mechanisms at the molecular, cellular, tissue, organ, and/or systemic levels.
- Students will demonstrate that they understand the cellular pathways targeted for pharmacological treatment.
- Pupils will demonstrate a comprehension of how the body interacts with compounds used for pharmacological treatments.
- Students will manifest the knowledge, skills and vocabulary necessary to converse with health care providers concerning their own and family's medical treatments.

PDBIO 562 : Reproductive Physiology. (0-3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PDBio 362 or equivalent.

RECOMMENDED: Chem 481, PDBio 482; or equivalents.

DESCRIPTION: Mammalian reproductive physiology.

Course Outcomes

- Students will be expected to demonstrate acquisition of both the basic and in-depthknowledge needed to be able to perform the following skills on course assignments, quizzes, and examinations:1. Demonstrate understanding of various reproductive processes at the molecular,biochemical, microscopic, and physiological levels.2. Demonstrate the skills needed to read, analyze, evaluate, comprehend, and synthesizescientific information from several different sources for use in both written and oralcommunication about various reproductive processes.3. Demonstrate an appreciation for the sacred nature of the reproductive processes thatresult in the production of offspring during in-class oral communication.

PDBIO 565 : Endocrinology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PDBio 362 or instructor's consent.

DESCRIPTION: Mammalian hormones.

Course Outcomes

- Students will be able to describe major actions of each hormone on target cells.
- Students will be able to describe pathways for synthesis, post-translational processing, and cellular localization or secretion for peptide hormones and hormone receptors.
- Students will be able to describe pathways for synthesis and inactivation for steroid hormones, thyroid hormones, and catecholamines.
- Students will be able to describe the control of synthesis and secretion for each hormone, including feedback relationships.
- Students will be able to describe major signaling pathways in target cells for each hormone.
- Students will be able to describe methodologies used to test hypotheses in study of problems in endocrinology.
- Students will be able to describe and recognize etiology and clinical symptoms of the major endocrine diseases

PDBIO 568 : Cellular Electrophysiology and Biophysics. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 362 & PHSCS 140; or PDBIO 362 & PHSCS 220

DESCRIPTION: Using electrophysiology and biophysics as an approach to study of physiology. Extensive look at ion channels and cell signaling.

Course Outcomes

- Students will demonstrate biophysical knowledge gained in specific areas including membrane properties,

voltage and ligand-gated receptors, neurotransmission and mathematical modeling.
- Students will apply the biophysical knowledge gained in a laboratory setting.
- Students will demonstrate critical thinking and evaluation skills gained in the course by preparing a competent and clearly written research proposal.
- Students will demonstrate knowledge of a particular research topic and presentation skills in a clear and informative oral presentation.

PDBIO 582 : Developmental Genetics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PDBio 482 or equivalent.

DESCRIPTION: Gene function and regulation during cell specification and differentiation, pattern formation, and organogenesis in developing embryo.

Course Outcomes
- Students will demonstrate understanding of, and the ability to think critically about, primary developmental biology research articles.
- Students will demonstrate confidence in contributing to scientific discussions.
- Students will demonstrate the ability to think scientifically by formulating a research proposal.

Admission to Degree Program

All degree programs in the Department of Plant and Wildlife Sciences are open enrollment.

The Discipline

Disciplines in the Department of Plant and Wildlife Sciences focus on four of the great dilemmas facing mankind in the twenty-first century: harnessing biological technology to meet the needs of an expanding human population in the developing world; assessing and minimizing the impact of human activities on an increasingly vulnerable environment; management and conservation of wildlife and wildlands; and managing landscapes to meet increasing water, space, and other resource limitations while enhancing the aesthetic quality of urban environments.

Majors offered provide a flexible education for directly entering the job market or preparing for graduate or professional schools in business, engineering, the health professions (medical and dental schools), landscape architecture, law, natural resources, public administration, or science.

Career Opportunities

Genetics and Biotechnology

The discipline of genetics and biotechnology focuses on applications of molecular biology and genomics to solve problems related to health, crop and animal production, forensics, and environmental remediation. This field holds tremendous promise for meeting food sustainability needs in the developing world, delivering medical treatments customized to each patient's genomic makeup, and reducing human impacts upon the environment. The major program educates students in scientific principles and current biotechniques through a combination of classroom instruction and mentored laboratory experience on original research projects with faculty and graduate students. Graduates are prepared for immediate employment in the biotechnology industry or for graduate study in biotechnology, molecular genetics, or the health professions. An optional, integrated track in biotechnology business affords students the option of obtaining a management minor through the Marriott School of Management in preparation for management careers in life sciences industries or for law school and subsequent careers as biological patent attorneys.

Environmental Science

Students majoring in environmental science learn fundamental principles of ecology; biodiversity; conservation; chemistry; engineering; geology; geography; and plant, animal (invertebrate/vertebrate), and soil sciences to help them solve environmental problems. They are prepared for graduate study and direct employment in fields dealing with assessing and remediating human-induced environmental impacts, as well as for careers in law, business, and the health professions.

Landscape Management

This program is accredited by the Professional Landcare Network (PLANET), the leading professional organization in landscape contracting. The major combines practice and instruction in horticultural science, business, and landscape design to prepare students for employment as managers in landscape contracting or for graduate studies in business, law, landscape architecture, and horticulture.

Wildlife and Wildlands Conservation

Wildlife and wildlands conservation is directed at managing wildland ecosystems-optimizing the function and services of natural ecosystems. Students are educated in wildland plants, animals, soils, and ecology, as well as wildlife and land management techniques. Graduates are well prepared to deal with complex issues involving wildlife and wildlands management and the overall conservation of natural resources.

This degree program qualifies students to work for a wide array of government and private land-management and conservation agencies. Students can qualify for federal job series employment in wildlife biology, range conservation, ecology, zoology, and botany. Common employers of these students include the U.S. Forest Service, Bureau of Land Management, Natural Resource Conservation Service, Fish and Wildlife Service, Park Service, and state wildlife management agencies. Graduates are well prepared to deal with complex issues involving wildlife and wildlands management and the overall conservation of natural resources.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

Undergraduate Programs and Degrees

BS in Environmental Science (Program Outcomes)
BS in Genetics and Biotechnology (Program Outcomes)
BS in Landscape Management (Program Outcomes)
BS in Wildlife and Wildlands Conservation (Program Outcomes)

Minor in Environmental Science
Minor in Landscape Management

Students should see their college advisement center for help or information concerning the undergraduate programs. Undergraduate advisement in major requirements is available from departmental faculty (assigned advisor).

Graduate Programs and Degrees

MS in Agronomy
MS in Genetics and Biotechnology
MS in Wildlife and Wildlands Conservation
PhD in Wildlife and Wildlands Conservation

For more information see the BYU 2013–2014 Graduate Catalog.

Program Requirements | View MAP | View Program Outcomes

1. Complete the following environmental science core courses:

PWS 150 : Environmental Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Conservation and management of natural resources concurrent with increasing socioeconomic and human population demands; factors such as soil, water, and air pollution, resources management, bioremediation, nutrient cycles, and global climate changes

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

- Gain a deep appreciation for the Lord's admonition to Adam and Eve regarding the Earth to dress it and keep it
- Engage others and participate in discussions about major environmental problems, movements, and solutions (e.g., desertification, invasive species, water pollution, green revolution, and renewable energy).
- Understand how “science” is conducted.
- Demonstrate a fundamental knowledge (i.e., scientific literacy) of the environment and current environmental problems facing us locally, regionally, and globally.
- Devise experiments with testable hypotheses based the scientific method—process of making observations and logically integrating those observations into a model of how the world works.
- Foster and promote environmental stewardship within your realm of influence and your community.

PWS 155 : Careers in Environmental Science. (1:1:0)

WHEN TAUGHT: Fall

Course Outcomes

There are no course outcomes available

PWS 282 : Introduction to Soil Science. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 283 or concurrent enrollment.

DESCRIPTION: Physical, chemical and microbiological properties of soils that affect plant growth in natural, agricultural, and urban environments.

Course Outcomes

- Enhance critically thinking skills as they apply to soil resource management and conservation
- Demonstrate a fundamental knowledge of soil chemistry, genesis, microbiology, physics, taxonomy, and nutrient and water relations
- Create a conceptual framework to help manage soil resources (i.e., animal habitat, plant nutrient fertility, salinity, soil and water quality, and wind and water erosion) in agricultural, urban, and ecological settings
- Understand the historical and current problems, and cultural concerns facing soils as a natural resource essential to human life

PWS 283 : Introduction to Soil Science Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 282 or concurrent enrollment.

DESCRIPTION: Laboratory techniques in determining soil physical, chemical, and fertility properties.

Course Outcomes

- Understand basic soil assessments related to soil chemistry, physics, biology, and nutrient fertility
- Apply laboratory techniques to determine problems associated with soil resource conservation and management
- Conduct basic soil methods in nutrient analysis; textural classification; and organic matter, cation exchange capacity, acidity, and alkalinity content

PWS 305 : Soils and Water Quality. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 282 & CHEM 105; or PWS 282 & CHEM 101; PWS 100 or equivalent; Math 110 or equivalent.

DESCRIPTION: Principles and practices of safe management of agricultural and urban wastes; amendments and nutrients including remediation methods for conservation of soils and water quality.

Course Outcomes
- Evaluate case studies in current topics soil and water quality
- Demonstrate a fundamental knowledge in water quality and water resource conservation as influenced by soil-water-atmosphere interactions
- Enhance critically thinking skills as it relates to issues in water quality management and resource conservation
- Improve mathematical and statistical skills related to nutrient, salinity, sodicity, and toxicity evaluation and management

PWS 345 : Air Quality and Pollution. (2:2:0)

WHEN TAUGHT: Winter

DESCRIPTION: Origin, effects, ecology, and management of major atmospheric pollutants - current topics in air quality, methods for quantifying pollutants and assessing air quality, and policy and management principles governing air as a natural resource.

Course Outcomes
There are no course outcomes available

PWS 365 : Environmental Microbiology. (3:3:0)

WHEN TAUGHT: Fall

RECOMMENDED: Chem 101 or 105; PDBio 120; PWS 150.

DESCRIPTION: Environmental microbiology in aquatic and terrestrial systems. Detecting, enumerating, and identifying microorganisms. Bioremediation of organic and metal pollutants. Microbial-mediated transformations in nutrient cycling. Spread of pathogens.

Course Outcomes
- Demonstrate a fundamental knowledge of the environmental microbiology surrounding soil, water, and air conservation, quality, and pollution
- Understand the basic chemistry, biochemistry, and physics associated with the bioremediation, nutrient cycling, and pathogenesis
- Foster and promote environmental stewardship within yourself and your community
- Write and orally communicate more effectively and concisely

PWS 366 : Environmental Microbiology Lab. (1:0:3)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 365 or concurrent enrollment.

RECOMMENDED: Chem 101 or 105; PDBio 120; PWS 150.

DESCRIPTION: Laboratory and field techniques. Detecting, enumerating, and identifying microorganisms via microscopic and cultural assays. Microbial transformation and responses to pollutants. Detecting techniques evaluating coliforms and fecal coliforms, viruses, and parasites.

Course Outcomes
There are no course outcomes available

PWS 375 : Environmental Policies and Laws. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Inception, current state, and future directions of seminal environmental policies and laws established in the US to improve environmental quality. Application of policies and laws in resource conservation and management, including a National Environmental Policy Act certification program.

Course Outcomes
- Demonstrate a fundamental understanding of the inception, current state, and future needs of the five seminal developments in environmental policy and law (i.e., Clean Air Act; Clean Water Act; National Environmental Policy Act; Comprehensive Environmental Response, Compensation, and Liability Act or Superfund; and the Endangered Species Act)
- Create your own conceptual framework for analyzing policy change in the United States and abroad, and understand the role of government, society, and economics in shaping this framework
- Understand the formal institutional setting in which policy is developed, the major participants involved, and the role of science in shaping policy
- Gain a basic understanding of how environmental laws (e.g., statutes, cases, and common laws) operate to regulate our interaction with the environment and one another
- Write more effectively and concisely

2. Complete one course from the following biology courses:

BIO 350 : Ecology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Distribution and abundance of organisms and their interactions with the physical and biotic components of the earth.

Course Outcomes
- Understand the major physical processes that form and characterize the biosphere, including global scale energy flow, the carbon cycle, climate, and soil formation.
- Understand the processes that drive major levels of organization of the biotic world, including energetics in the ecosystem, population dynamics, and species interactions.
- Understand the importance of writing as a way of synthesizing and solidifying critical thought.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Understand the importance of ecology to issues regarding human well-being
- See the connectivity and relevance of ecology to other fields of study

PWS 350 : Rangeland Ecology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 150 or Bio 100 or Bio 130 or PDBio 120.

DESCRIPTION: Distribution and abundance of organisms and their interactions with the physical and biotic components of the earth emphasizing rangeland ecosystems.

Course Outcomes
- Demonstrate a fundamental knowledge of ecological principles and the multiple dimensions of biodiversity.
- Possess a working knowledge of the ecology relating to soil, water, and air conservation.
- Understand how global and geologic processes affect life on earth.
- See the connectivity and relevance of ecology to other fields of study.
- Understand the importance of ecology to issues regarding human well-being.

3. Complete one course from the following biology courses:

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes
There are no course outcomes available

PWS 100 : Living with Plants. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Introduction to principles of plant function and diversity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
- Demonstrate a fundamental knowledge of basic principles and concepts of plant biology (i.e., structure, function, and diversity)
- Cultivate an appreciation for the central importance of plants in the way our world and human society functions
- Provide a conceptual framework of how plants influence the environment
- Practice using the scientific method to better understand plant-environment interactions
- Improve verbal and written communication

4. Complete one course from the following:

BIO 450 : Conservation Biology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 220A & BIO 350; or BIO 220B & BIO 350

DESCRIPTION: Scientific principles of conservation: applying population genetics, and phylogenetic and ecological theory to preservation of biological diversity; developing sustainable ecological systems compatible with human resource use.

Course Outcomes
- Apply an understanding of ecological processes to conservation of populations, species, and ecosystems.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Demonstrate the ability to apply the scientific method and analytical thinking to ecological and conservation issues.
- Demonstrate the ability to synthesize literature relevant to a topic in conservation bioloigy
- Demonstrate the ability to write a scientific term paper

PWS 199R : Academic Internship. (.5-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Consent of both department chair and internship coordinator.

DESCRIPTION: Work experience evaluated by supervisor and posted on student's transcript.

Course Outcomes
- Students will find an entry level internship position with a high quality company and receive above average ratings from the employer.

(2 hours required).

PWS 494R : Mentored Learning Experience. (1-6:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Topics vary.
NOTE: Registration required for mentored experiences.

Course Outcomes
- Design and/or participate in basic experiments attempting to answer questions in biochemistry, biotechnology, genetics, molecular biology, and soil science
- Generate and analyze experimental results for publications or presentations at professional meetings
- Learn how to be an effective and efficient mentor

: Biotechnology Laboratory.

Course Outcomes

: Plant Physiology Laboratory.

Course Outcomes

: Environmental Science Laboratory.

Course Outcomes

: Soil, Plant, and Water Science Laboratory.

Course Outcomes

: Environmental Science Field Techniques.

Course Outcomes

: Plant and Soil Science Field Techniques.

Course Outcomes

: Plant Breeding Field Techniques.

Course Outcomes

: Plant Tissue Culture and Transformation Techniques.

Course Outcomes

: Plant Cytogenetics Laboratory.

Course Outcomes

: Animal Cytogenetics Laboratory.

Course Outcomes

: Plant Cell Biology Laboratory.

Course Outcomes

: Analytical Techniques in Plant Biology.

Course Outcomes

: Environmental Science Computation Laboratory.

Course Outcomes

: Molecular Genetics and Gene Mapping Laboratory.

Course Outcomes

: Plant and Animal Genomics Laboratory.

Course Outcomes

: Analytical Techniques in Soil Science.

Course Outcomes

: Animal Genetics and Breeding Techniques.

Course Outcomes

: Soil Physical Properties Laboratory.

Course Outcomes

: Soil and Water Chemistry Laboratory.

Course Outcomes

: Animal Reproductive Research Laboratory.

Course Outcomes

: Field Techniques in Environmental Soil Research.

Course Outcomes

: Soil Microbiology Laboratory.

Course Outcomes

: Plant ID / URME Team.

Course Outcomes

(2 hours required).

5. Complete at least 6 hours from either of the two following groups:
   - CHEM 105 : General College Chemistry. (4:5:0)

     WHEN TAUGHT: Fall; Winter; Spring; Summer

     PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

     DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

     NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

     Course Outcomes
     - Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
     - Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
     - Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
     - A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
     - Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

   CHEM 106 : General College Chemistry. (3:4:0)

   WHEN TAUGHT: Fall; Winter; Summer

   PREREQUISITE: CHEM 105; or CHEM 111

   DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

   NOTE: Three lectures and one recitation section per week.

   Course Outcomes
   - Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
   - Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

   CHEM 107 : General College Chemistry Laboratory. (1:0:3)

   WHEN TAUGHT: Fall; Winter; Spring; Summer

   PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

   DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

   NOTE: Required for most students needing one year of general chemistry.

   Course Outcomes
   - Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
   - Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

   CHEM 351 : Organic Chemistry. (3:3:1)

   WHEN TAUGHT: Fall; Winter; Spring

   PREREQUISITE: CHEM 105; or CHEM 111

   DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

   NOTE: Primarily for majors in chemical engineering and the biological sciences.

   Course Outcomes
   - Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
   - Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
   - Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
   - Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
   - Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
   - Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
   - Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

- CHEM 101 : Introductory General Chemistry. (3:3:0)
  WHEN TAUGHT: Fall; Winter; Spring; Summer
  PREREQUISITE: Math 97 or equivalent.
  DESCRIPTION: Atomic and molecular structure, periodic relationships, states of matter, chemical reactions and stoichiometry, acids and bases.
  NOTE: Primarily for nonscience majors who require a broad introduction to general chemistry.

  Course Outcomes
  - Students will be able to view the world around them in chemical terms. Students will use the concepts of atoms, molecules, and their properties to understand a variety of phenomena.
  - Students will be able to make qualitative and/or quantitative predictions regarding a number of chemical concepts including chemical reactions and stoichiometry, calorimetry, osmosis, gases, acid/base chemistry, chemical equilibria, and radioactivity.

  CHEM 285 : Introductory Bio-organic Chemistry. (4:4:1)
  WHEN TAUGHT: Fall; Winter; Spring
  PREREQUISITE: Chem 101 or equivalent.
  DESCRIPTION: Principles of organic chemistry and biochemistry relating to biomolecule structure and function.

  Course Outcomes
  - Students will understand the metabolism of carbohydrates, lipids, and proteins in humans. They will be able to describe in structures and words the metabolism of sugars through the pathways of glycolysis, the citric acid cycle, and the electron transport chain.
  - Students will understand the structure and reactivity of organic functional groups, such as alcohols, aldehydes, carboxylic acids, and amides. For example, students will learn that aldehydes and ketones typically undergo addition reactions.
  - Students will understand the structure and reactivity of the biomolecules that have those functional groups. For example, students will be able to demonstrate that carbohydrates are aldehydes and ketones that undergo addition reactions to form hemiacetals and polysaccharides with acetal linkages.

Note: Recommended courses for graduate school and for toxicology, soil, and water tracks: Chem 105, 106, 107, 351, 352, 353.

6. Complete 25 hours from the following list of general electives. The list is organized into suggested career tracks that students may find useful, but students may choose *any* combination of the courses listed below to fulfill their 25 hours.

   Health and Ecotoxicology Core Track:
   - Complete the following:

     CHEM 351 : Organic Chemistry. (3:3:1)
     WHEN TAUGHT: Fall; Winter; Spring
     PREREQUISITE: CHEM 105; or CHEM 111
     DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.
     NOTE: Primarily for majors in chemical engineering and the biological sciences.

     Course Outcomes
     - Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
     - Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
     - Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
     - Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
     - Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
     - Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
     - Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

     CHEM 352 : Organic Chemistry. (3:3:1)
     WHEN TAUGHT: Fall; Winter; Spring; Summer
     PREREQUISITE: CHEM 351; or CHEM 351M
     DESCRIPTION: Continuation of Chem 351.

     Course Outcomes
     - Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
     - Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
     - Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
     - Recognize and predict the structure and reactivity of the following classes of biologically

important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 352 or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.

NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes

- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

MMBIO 261 : Infection and Immunity. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Principles of infectious organisms (principally bacteria and viruses), the diseases they cause, and the role of host immune responses in health and disease.

Course Outcomes

There are no course outcomes available

PDBIO 362 : Advanced Physiology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220

DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.

NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes

- Students will manifest an understanding of how structures at the molecular level lead to properties associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

PDBIO 363 : Advanced Physiology Laboratory. (1:.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 362 or concurrent enrollment; or instructor's consent.

DESCRIPTION: Experiments and exercises in advanced physiology emphasizing human physiology. Computer simulations of muscle function, endocrine disease, and human physiology. Emphasizes problem solving and calculations.

Course Outcomes

- Students will demonstrate the skills required to properly interpret data from scientific experimentation to discover how physiological systems function.
- Students will manifest an understanding of basic physiological principles by modeling how human cells, organs, and organ systems function.
- Students will describe how interactions between human organ systems work to maintain homeostasis.

PDBIO 365 : Pathophysiology. (4:4:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 305; or PDBIO 362

DESCRIPTION: Variations in physiological mechanisms that account for development of common disturbances in normal control and activities of body's organs and organ systems.

Course Outcomes

- Students will exhibit an integrative understanding of the biochemistry, molecular biology, genetics, cell biology, microbiology, environmental biology, and physiology related to the prevention, development, and treatment of common diseases.
- Students will demonstrate through case study analysis a command of problem solving skills related to the diagnosis and treatment of pathophysiological conditions.
- Pupils will manifest a command of the physiology and pathophysiological vocabulary necessary to effectively communicate with other biomedical professionals and the general public.
- Students will be able to articulate the ethical issues related to the treatment and prevention of pathophysiological conditions.
- Students will manifest an increase in their respect for the human body and adopt a life style consistent with this respect.

- Complete an additional 7 hours from the general major electives list below.

Soil Science and Conservation Core Track:

- Complete the following:

CHEM 285 : Introductory Bio-organic Chemistry. (4:4:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

DESCRIPTION: Principles of organic chemistry and biochemistry relating to biomolecule structure and function.

Course Outcomes

- Students will understand the metabolism of carbohydrates, lipids, and proteins in humans. They will be able to describe in structures and words the metabolism of sugars through the pathways of glycolysis, the citric acid cycle, and the electron transport chain.
- Students will understand the structure and reactivity of organic functional groups, such as alcohols, aldehydes, carboxylic acids, and amides. For example, students will learn that aldehydes and ketones typically undergo addition reactions.
- Students will understand the structure and reactivity of the biomolecules that have those functional groups. For example, students will be able to demonstrate that carbohydrates are aldehydes and ketones that undergo addition reactions to form hemiacetals and polysaccharides with acetal linkages.

GEOG 306 : Public Land Conservation. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Environmental and social geography of public lands; analyzing historical, planning, management, and ecological issues.

Course Outcomes

There are no course outcomes available

PWS 303 : Soils Conservation and Resources. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 282 & CHEM 105; or PWS 282 & CHEM 101; PWS 100 or equivalent; Math 110 or equivalent.

RECOMMENDED: Geol 111.

DESCRIPTION: Taxonomy of world soils; conservation and management of agricultural, wildland, wetland, and urban soils.

Course Outcomes

- Understand soil physics, chemistry, taxonomy, and water movement to maintain natural resources.
- Apply soil conservation practices and principles to regions sensitive to soil degradation.
- Understand the history, development, and terminology associated with USDA Soil Taxonomy and be familiar with other soil taxonomic systems. Recognize soil orders and suborders from the physical and chemical characteristics of the soil

PWS 306 : Soil Fertility and Plant Nutrition Laboratory. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 305 or concurrent enrollment.

DESCRIPTION: Laboratory for studying nutrient-supplying power of soils, nutrient deficiencies and toxicities, and plant adaptation to nutritional stresses.

Course Outcomes

- Gain a fundamental understanding of the investigative techniques necessary to solve problems associated with water and soil resources and management
- Understand the basic diagnostic steps to test water and soil quality
- Improve mathematical and statistical skills related to nutrient, salinity, sodicity, and toxicity evaluation and management

PWS 402 : Urban Soils and Water. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 100 & PWS 282.

DESCRIPTION: Principles of water management, soil physics, and soil fertility used in a problem-solving environment addressing current challenges in managing soils and water in the urban landscape.

Course Outcomes

- Students will apply concepts assimilated in previous courses to solve problems associated with at least five real world case studies. By assignment, eachwill develop an assessment matrix for use in problem solving situations encountered in their future careers.
- A primary goal of this course is for students to greatly increase their knowledge base of scientific principles related to plant, water, soil, nutrient, and pest management. This will be assessed by examination at beginning and end of semester with a target of at least doubling of average scores.
- Students will successfully writeseveral documents, including a research paper and diagnostic key at an upperclassmen level of writing. Students will actively participate in team problem solving and a Group presentation.
- Students will develop at least one individual and group item to add to their portfolio. Development of a diagnostic key, writing an evaluation paper, development of a group presentation and completion of a semester project could each contribute to portfolios.

- Complete an additional 10 hours from the general major electives list below. (Recommended for advanced students: PWS 511, 514, 520, and/or 560.)

Water Resources and Conservation Core Track:

- Complete the following:

CHEM 285 : Introductory Bio-organic Chemistry. (4:4:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

DESCRIPTION: Principles of organic chemistry and biochemistry relating to biomolecule structure and function.

Course Outcomes

- Students will understand the metabolism of carbohydrates, lipids, and proteins in humans. They will be able to describe in structures and words the metabolism of sugars through the pathways of glycolysis, the citric acid cycle, and the electron transport chain.
- Students will understand the structure and reactivity of organic functional groups, such as alcohols, aldehydes, carboxylic acids, and amides. For example, students will learn that aldehydes and ketones typically undergo addition reactions.
- Students will understand the structure and reactivity of the biomolecules that have those functional groups. For example, students will be able to demonstrate that carbohydrates are aldehydes and ketones that undergo addition reactions to form hemiacetals and polysaccharides with acetal linkages.

GEOL 111 : Physical Geology. (4:3:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Materials, structure, and surface features of the earth and the geologic processes involved in their development. Field trips and lab studies, use of aerial photos.

Course Outcomes

- 1. Learn the basic mineral types, how they form, and how they differ structurally.2. Understand how minerals are put together to form rocks.3. Learn the names and how to recognize the basic sedimentary, igneous, and metamorphic rock types.
- 1. Understand the basic atmospheric and hydrologic systems and how they affect the Earth's rocks.2. Learn how man has influenced these systems and what the possible future outcomes of this influence might be.
- 1. Learn the basic workings of the Earth's tectonic system and the evidences that support the plate tectonic theory.2. Understand how to interpret geologic structures and rocks in terms of the tectonic system.
- Learn some fundamental skills in preparation to conduct research and ultimately write research papers in other classes, including:1. Using online databases (GEOREF, Web of Science) to obtain information on a particular topic.2. Using online resources (Refworks) to manage and format references.3. Reading articles in the primary geologic literature and drawing out primary information such as the topic of and article and its conclusions even if the student is not prepared (at this stage) to understand the methodology employed.4. Appreciate the need to properly format cited literature in a research paper.5. Learn the content and proper voice for the abstract of a research paper.
- 1. Understand the nature of fossil fuel resources, their origin, and the magnitude of reserves of coal, oil, natural gas, etc.2. Understand the nature of metallic resources, including their origin, distribution across the globe, and the magnitude of reserves.3. Appreciate the environmental consequences of fossil fuel and metallic resource extraction.4. Become aware of the major hazards posed by earthquakes, volcanic eruptions, and their attendant phenomena.5. Understand the fundamental processes that regulate the climate, as well as the role of human activity in climate change.
- 1. Learn or review the large scale features of the Earth's interior and exterior, including the basic features of the tectonic and hydrological systems.2. Appreciate the role of heat transfer, and in particular convection, in making both the hydrosphere and tectonosphere dynamic.

GEOL 435 : Introduction to Groundwater. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111; or GEOL 330; Math 110 or equivalent.

DESCRIPTION: Introduction to the occurrence, movement, and properties of subsurface water; surface and groundwater relationships.

Course Outcomes

- Demonstrate knowledge of the hydrologic cycle by creating a basin-scale water budget.
- Evaluate the relationship between grain size, sorting, and hydraulic conductivity using Darcy's Law.
- Produce a potentiometric surface map and water table map for a well field.
- Evaluate the relationship between mechanical energy, hydraulic head, and force potential.
- Construct a flow net to describe groundwater flow.
- Evaluate different aquifer test methods for calculating aquifer parameters.
- Evaluate different methods for estimating groundwater recharge rates.
- Describe groundwater flow paths for confined and unconfined aquifers.
- Produce a consulting-type report that synthesizes the groundwater resources, flow paths, and aquifer characteristics of a basin.

PWS 325 : Fisheries and Wetlands Management. (3:2:3)

WHEN TAUGHT: Fall

RECOMMENDED: PWS 225 or equivalent.

DESCRIPTION: Principles of fisheries and wetlands mangement, emphasizing managing fish populations and their diverse micro- and macro-habitats within the context of community and

ecosystem dynamics. Case studies and models used to evaluate growth, recruitments, and mortality in age-structured populations in relationship to the dynamics of watershed and wetland landscapes.

Course Outcomes
- Understand ecological aspects of fisheries and wetland systems.
- Learn important aspects of fisheries and wetland management.
- Integrate concepts taught in class to other ecological systems.

PWS 402 : Urban Soils and Water. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 100 & PWS 282.

DESCRIPTION: Principles of water management, soil physics, and soil fertility used in a problem-solving environment addressing current challenges in managing soils and water in the urban landscape.

Course Outcomes
- Students will apply concepts assimilated in previous courses to solve problems associated with at least five real world case studies. By assignment, eachwill develop an assessment matrix for use in problem solving situations encountered in their future careers.
- A primary goal of this course is for students to greatly increase their knowledge base of scientific principles related to plant, water, soil, nutrient, and pest management. This will be assessed by examination at beginning and end of semester with a target of at least doubling of average scores.
- Students will successfully writeseveral documents, including a research paper and diagnostic key at an upperclassmen level of writing. Students will actively participate in team problem solving and a Group presentation.
- Students will develop at least one individual and group item to add to their portfolio. Development of a diagnostic key, writing an evaluation paper, development of a group presentation and completion of a semester project could each contribute to portfolios.

PWS 411 : Watershed Management. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: BIO 350; or PWS 350

DESCRIPTION: Processes and management of the hydrologic cycle of forests and rangelands.

Course Outcomes
- Students will understand the history and policy that drives water management in the western US.
- Students will understand ecological and hydrological processes and concepts and apply them to watershed management actions such as harvesting, grazing, and restoration.
- Students will be able to apply assessment and classification tools to watersheds and their components to determine how management actions affect hydrologic responses.

- Complete an additional 4 hours from the general major electives list below. (Recommended for advanced students: PWS 511, 514, Bio 556 and/or Bio 557.)

Ecology Core Track:
- Complete the following:

PWS 215 : Principles of Range Management. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Overview of rangeland resources and management principles, including rangeland classification, multiple use management, natural resource policy, and grazing management.

Course Outcomes
- Describe rangeland physical characteristics, types, physiology, and ecology
- To understand the principles of stewardship and how they apply to Rangelands
- To understand the importance of rangeland grazing, how it is managed, and nutrient needs of livestock and wildlife
- Describe multiple use management and its implications to wildlife and livestock
- To improve reading and writing skills relating to scientific research

PWS 344 : Natural History of Wildlife. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

RECOMMENDED: PWS 225 or equivalent.

DESCRIPTION: Wildlife species and their habitats, including ecology, life histories, adaptations, behavior, genetics and population viability variables, and the ethics of global stewardship. Field trips required.

Course Outcomes
- In this course, students will be rigorously taught the scientific method and given opportunities to demonstrate the understanding through wildlife ecology problem solving. They will have writing assignments that provide opportunities for the synthesis and expression of the depth of their understanding.
- This course introduces students to a number of wildlife and fish species, and basic ecological concepts as they relate to wildlife and fisheries. Students will understand the biology, ecological roles, habitat needs, ecological adaptations, and interactions of fish and wildlife at various levels in an ecosystem.
- Be able to define “natural history” and be able to describe basic concepts and principles that comprise the natural history of an organism
- Gain an appreciation for the diversity of lifestyles among vertebrates

- Develop critical reading and thinking skills
- Improve oral and written communication skills

PWS 355 : Rangeland Vegetation Measurements and Analysis. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Field methodologies for vegetation inventories and analysis (density, biomass, cover, frequency, utilization, etc.) in wildland settings.

Course Outcomes
- Students will be able to demonstrate, through lab exercises and write-ups, an understanding of ecological processes that drive secondary succession in wildland ecosystems which in turn impact management decisions.
- Students will be able to apply vegetation data collection techniques to quantify vegetation and make interpretations used in resource management decisions.

PWS 417 : Rangeland Planning and GIS. (3:2:3)

WHEN TAUGHT: Winter

RECOMMENDED: PWS 215, 225, 350.

DESCRIPTION: Development of a multiple-use natural resource plan for watershed forestry, recreation, wildlife, and livestock. Policies that govern planning and conflict resolution.

Course Outcomes
- Identify and articulate stewardship for the creation as a basis for professional judgment.
- Apply an understanding of ecological processes to wildland management
- Demonstrate ability to apply the scientific method and analytical thinking to ecological and management issues.

PWS 419 : Forest Management and Ecology. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Managing forests, emphasizing ecosystem managment.

NOTE: Field trips required.

Course Outcomes
- 1. Articulate their role as stewards over forested environments.
- 2. Appreciate the diversity of forests world-wide and their importance to human populations.
- 3. Apply knowledge of forest structure, function, and process in making management decisions
- 4. Be able to quantify forest structure and production
- 5. Recognize forest pests and diseases and know appropriate control techniques.
- 6. Relate forests to wildlife habitat
- 7. Identify 75 tree species located in Utah and on BYU campus.

PWS 440 : Plant Physiology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: GE Biological Science requirement; college chemistry

RECOMMENDED: Chem 285; or 351, 352.

DESCRIPTION: Photosynthesis, respiration, water relations, mineral nutrition, growth of flowering plants.

Course Outcomes
- Students will be fluent in understanding plant function at the molecular, biochemical and whole plant levels
- Students will understand the connections between plant function and ecosystem processes
- Student will practice applying the scientific method in order to develop critical thinking and problem solving skills
- Student will engage in learning activities that increase there writing and speaking proficiency

- Complete an additional 7 hours from the general major electives list below. (Recommended for advanced students: PWS 540, 551 and/or PWS 553.)

Eco-business Core Track:

- Complete the following:

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.

DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

Course Outcomes
- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.
- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.

- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

BUS M 241 : Marketing Management. (3:3:0)

OFFERED: Independent Study also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Marketing's role in society and the firm, marketing opportunities, the consumer market, and management of marketing mix.

Course Outcomes
- Understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers.
- Describe how specific firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Design a marketing plan for a new venture by applying the appropriate tools and approaches studied

or

BUS M 489 : Agribusiness Management 2. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: ACC 200 & BUS M 201 & ECON 110; or ACC 200 & FIN 201 & ECON 110
DESCRIPTION: Developing and implementing marketing plans and programs for companies participating in the value chain of agribusiness industries.

Course Outcomes
- Students will understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers in life sciences industries.
- Describe how life sciences firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Students will understand the basics of the market research process.
- Students will study current marketing techniques in life sciences-based industries.
- Students will learn to apply faith-based, moral reasoning and personal integrity in professional life.
- Students will learn to work effectively within a team and to communicate effectively in business environments.

BUS M 371R : Entrepreneurship Lecture Series. (1:1:0)

WHEN TAUGHT: Fall; Winter
DESCRIPTION: Lectures by successful entrepreneurs on subjects significant to entrepreneur-type opportunities.

Course Outcomes
- Recognize and resolve ethical challenges and choices in specific organizational contexts.
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life

ECON 110 : Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
There are no course outcomes available

: Honors Economic Principles and Problems.

Course Outcomes

FIN 201 : Principles of Finance. (3:3:1.5)

WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: Acc 200.
DESCRIPTION: Financial management from the viewpoint of the business manager emphasizing profitability, liquidity, and long-range financial planning.

Course Outcomes
There are no course outcomes available

GEOG 306 : Public Land Conservation. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Environmental and social geography of public lands; analyzing historical, planning, management, and ecological issues.

Course Outcomes
There are no course outcomes available

HLTH 322 : Environmental Health. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: Hlth 100.

DESCRIPTION: Environmental factors as determinants of human health: ecosystem and population dynamics; biological, chemical, and physical hazards; risk assessment; economic, political, cultural, and genetic factors.

Course Outcomes
- Provide a global perspective of environmental issues impacting human health
- Describe the various biological, chemical and physical hazards of the ambient, indoor, and work environment that can adversely affect human health
- Discuss those determinents and factors that affect human health and the health of the environment
- Describe how environmental management practices may contribute to or help control emerging diseases
- Provide an assessment of those national and international health agencies, programs, and other resources that play critical roles in improving human health relative to environmental factors
- Discuss elements of policy making as they influence environmental health issues

- Complete an additional 6 hours from the general major electives list below.

Major electives:

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.

DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

Course Outcomes
- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.
- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

BIO 235 : Field Botany. (3:3:6)

WHEN TAUGHT: Fall; Spring

DESCRIPTION: Recognition, characteristics, and uses of common trees and shrubs.

Course Outcomes
- Students will demonstrate a fundamental knowledge of biology
- Students will develop the discovery skills and tools used by biologists
- Students will use biological knowledge to enhance their personal lives
- Students will use their skills and knowledge in biology to secure employment or to advance in higher education in biology-related disciplines

BIO 370 : Bioethics. (2:1:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Introductory biology course.

DESCRIPTION: In-depth lecture and small group discussion of varied bioethical issues. LDS Church positions emphasized when appropriate.

Course Outcomes
- Students will understand the ethical and philosophical underpinnings of bioethics and to develop ethical intuitions on bioethical issues.
- Students will learn the terminology, vocabulary, and objectives of bioethics.
- Students will understand the tools and approaches needed to make a bioethical decision and to communicate that decision in rationally informed ways.
- Students will understand the bioethical primary literature, to understand how to read case studies, and familiarity with the major issues being discussed in bioethics today.

BIO 420 : Evolutionary Biology. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PWS 340

RECOMMENDED: Concurrent enrollment in Bio 421.

DESCRIPTION: Intensive examination of evolution as the conceptual cornerstone of biology.

Course Outcomes

- Students will be able to describe the history and development of evolutionary thought.
- Students will be able to list and describe the evidence for evolution and its required corollaries.
- Students will be able to describe the mechanisms by which evolution occurs. Provide detailed explanations of the the processes of evolution by mutation, migration, genetic drift, non-random mating, and natural selection.
- Students will be able to explain adaptation, providing examples from several different fields of biology (e.g., cell biology, physiology, conservation biology, bioinformatics, medicine, behavior, etc.).
- Students will be able to describe the history of life on earth. Identify major evolutionary transitions over time, and explain the tools and evidence that support current hypotheses of the history of life.

BIO 421 : Evolutionary Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240

DESCRIPTION: Hands-on applications and analytical tools of evolutionary biology; emphasizing inference methodology and evidence complementing the theoretical constructs introduced in Bio 520, including comparative anatomy, phylogenetic inference, population genetics, species concepts, and human evolution.

NOTE: Concurrent enrollment with Bio 420 is strongly recommended.

Course Outcomes

- Students will gain a better understanding of the basic principles of evolution within a population including selection, drift, and founder effects by using computer simulations.
- Students will have a deeper understanding of the LDS position on evolution.
- Students will learn the details of phylogenetic reconstruction, tree searching, DNA sequence alignment, and other bioinformatics tools for deciphering patterns of evolution.
- Students will learn the details of species concepts and the criteria used for identifying and diagnosing species.
- Students will gain hands-on experience with hominid fossils and gain an understanding of the evidence that elucidates the biological history of humans.

BIO 556 : Limnology. (3:2:4)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Bio 350, Chem 106; or equivalents.

DESCRIPTION: Lakes, reservoirs; their biota and physical/chemical properties.

Course Outcomes

- Understand the major physical processes that form and characterize lentic habitats.
- Understand the dominant chemical processes that occur in lake systems.
- Understand how organisms adapt to the above physical and chemical constraints.
- Gain teaching experience through preparing a Powerpoint presenting your study presentation to the class.
- Experience pursuing a focused research topic from the initial question to a competed report.

BIO 557 : Stream and Wetland Ecology. (4:3:4)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Bio 350, Chem 106; or equivalent.

DESCRIPTION: Stream and wetland ecology; their biota and their physical/chemical properties.

Course Outcomes

- Develop an understanding of streams and wetlands within the broader context of ecology and conservation.
- Become familiar with the major conservation issue in streams and wetlands and the underlying ecological concepts.
- Initial exposure to the current literature.
- Develop skills related to critical thinking. That is, learn how to: a) read critically and summarize information, b) draw conclusions and synthesize information to develop new questions and hypotheses, and c) design experiments or comparative studies. It is important to start early to learn how to think, read, and write critically.

BUS M 241 : Marketing Management. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Marketing's role in society and the firm, marketing opportunities, the consumer market, and management of marketing mix.

Course Outcomes

- Understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers.
- Describe how specific firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Design a marketing plan for a new venture by applying the appropriate tools and approaches studied

BUS M 371R : Entrepreneurship Lecture Series. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Lectures by successful entrepreneurs on subjects significant to entrepreneur-type opportunities.

Course Outcomes

- Recognize and resolve ethical challenges and choices in specific organizational contexts.
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life

BUS M 489 : Agribusiness Management 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: ACC 200 & BUS M 201 & ECON 110; or ACC 200 & FIN 201 & ECON 110

DESCRIPTION: Developing and implementing marketing plans and programs for companies participating in the value chain of agribusiness industries.

Course Outcomes

- Students will understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers in life sciences industries.
- Describe how life sciences firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Students will understand the basics of the market research process.
- Students will study current marketing techniques in life sciences-based industries.
- Students will learn to apply faith-based, moral reasoning and personal integrity in professional life.
- Students will learn to work effectively within a team and to communicate effectively in business environments.

CHEM 223 : Quantitative and Qualitative Analysis. (4:2:6)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: CHEM 107; or CHEM 113

DESCRIPTION: Principles of chemical equilibrium, quantitative chemical measurements, and qualitative detection of selected chemical species.

NOTE: Primarily for majors in molecular biology and the life sciences.

Course Outcomes

- Course Objectives: The course is designed to develop research skills. The labwork will have a somewhat bioanalytical focus, e.g. the chemical analysis of biological molecules or biologically related ions and the use of biomolecules in assays. We will work to develop good laboratory practice, both conceptually and practically, and consider how to do good science. The combined lecture/lab approach will be used to help you understand quantitative approaches to analysis, sources of error, and the utility but also limitations of laboratory measurements. You will be asked to apply a portion of this knowledge to your own laboratory determinations. We will also discuss more advanced analytical methods involving chemical separations and instrumental analyses. This course fills one of the requirements for a minor in chemistry.

CHEM 285 : Introductory Bio-organic Chemistry. (4:4:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

DESCRIPTION: Principles of organic chemistry and biochemistry relating to biomolecule structure and function.

Course Outcomes

- Students will understand the metabolism of carbohydrates, lipids, and proteins in humans. They will be able to describe in structures and words the metabolism of sugars through the pathways of glycolysis, the citric acid cycle, and the electron transport chain.
- Students will understand the structure and reactivity of organic functional groups, such as alcohols, aldehydes, carboxylic acids, and amides. For example, students will learn that aldehydes and ketones typically undergo addition reactions.
- Students will understand the structure and reactivity of the biomolecules that have those functional groups. For example, students will be able to demonstrate that carbohydrates are aldehydes and ketones that undergo addition reactions to form hemiacetals and polysaccharides with acetal linkages.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes

- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.

- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

Course Outcomes

- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 352 or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.

NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes

- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes

- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

ECON 110 : Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

There are no course outcomes available

: Honors Economic Principles and Problems.

Course Outcomes

FIN 201 : Principles of Finance. (3:3:1.5)

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: Acc 200.

DESCRIPTION: Financial management from the viewpoint of the business manager emphasizing profitability, liquidity, and long-range financial planning.

Course Outcomes
There are no course outcomes available

GEOG 101 : Global Environment: Understanding Physical Geography. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Physical environment, distribution and interrelationships of climates, landforms, ecosystems and their human significance.

Course Outcomes
There are no course outcomes available

GEOG 212 : Introduction to Geographic Information Systems. (3:2:1)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Concepts in the use of small- and large-scale digital map data, emphasizing landscape interpretation and feature description.

Course Outcomes
- Understand basic spatial concepts and data models that form the foundation of GIS.
- Acquire geospatial data from common sources and manipuate them for a specific application.
- Analyze data using GIS to solve real world problems.
- Describe several applications in which GIS is used to solve geographic problems.
- Design and use maps to explore and communicate geospatial information.

GEOG 303 : Biogeography. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Geog 101.

DESCRIPTION: Broad-scale distribution of plants and animals. Theoretical and practical applications to conservation and effects of global environmental change.

Course Outcomes
- Demonstrate an understanding of basic concepts and processes in biogeography
- Recognize and be able to explain patterns of plant and animal life at many different scales
- Explain how humans have affected the distribution and diversity of plants and animals, and apply concepts to decisions regarding human use of the environment
- Demonstrate a knowledge of prominent professional biogeographers and ecologists and their current research themes
- Plan for future changes in species distributions and diversity as a result of environmental and human-induced pressures

GEOG 306 : Public Land Conservation. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Environmental and social geography of public lands; analyzing historical, planning, management, and ecological issues.

Course Outcomes
There are no course outcomes available

GEOG 310 : Introduction to Urban and Regional Planning. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Introduction to the profession and practice of urban and regional planning.

Course Outcomes
There are no course outcomes available

GEOL 101 : Introduction to Geology. (3:2:1)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Cultural focus on physical and environmental geology for nonscience majors; rocks and minerals. Field trips.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
- 1. Understand the difference between minerals and rocks.2. Be able to identify common rocks and minerals.3. Know where and when the basic rock and mineral types form and how they are related to the hydrologic and tectonic systems.
- 1. Understand how the hydrologic system helps to shape the Earth and how the different sub-systems interact.2. Learn the reasons for climate change in both ancient and modern times.
- 1. Learn the basic evidences and ideas that support the Theory of Plate Tectonics.2. Understand how the plate tectonic system works, including the role of the different types of plate boundaries and the forces that help to drive the system.3. Learn how the plate tectonic system has helped

to shape the Earth's surface.
- 1. Gain a greater insight into the enormous length of geologic time and the evidences that support this claim.2. Learn the different ways that scientists can determine geologic ages.
- Learn how and why the other planets and moons in our solar system are different from Earth.

GEOL 111 : Physical Geology. (4:3:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Materials, structure, and surface features of the earth and the geologic processes involved in their development. Field trips and lab studies, use of aerial photos.

Course Outcomes
- 1. Learn the basic mineral types, how they form, and how they differ structurally.2. Understand how minerals are put together to form rocks.3. Learn the names and how to recognize the basic sedimentary, igneous, and metamorphic rock types.
- 1. Understand the basic atmospheric and hydrologic systems and how they affect the Earth's rocks.2. Learn how man has influenced these systems and what the possible future outcomes of this influence might be.
- 1. Learn the basic workings of the Earth's tectonic system and the evidences that support the plate tectonic theory.2. Understand how to interpret geologic structures and rocks in terms of the tectonic system.
- Learn some fundamental skills in preparation to conduct research and ultimately write research papers in other classes, including:1. Using online databases (GEOREF, Web of Science) to obtain information on a particular topic.2. Using online resources (Refworks) to manage and format references.3. Reading articles in the primary geologic literature and drawing out primary information such as the topic of and article and its conclusions even if the student is not prepared (at this stage) to understand the methodology employed.4. Appreciate the need to properly format cited literature in a research paper.5. Learn the content and proper voice for the abstract of a research paper.
- 1. Understand the nature of fossil fuel resources, their origin, and the magnitude of reserves of coal, oil, natural gas, etc.2. Understand the nature of metallic resources, including their origin, distribution across the globe, and the magnitude of reserves.3. Appreciate the environmental consequences of fossil fuel and metallic resource extraction.4. Become aware of the major hazards posed by earthquakes, volcanic eruptions, and their attendant phenomena.5. Understand the fundamental processes that regulate the climate, as well as the role of human activity in climate change.
- 1. Learn or review the large scale features of the Earth's interior and exterior, including the basic features of the tectonic and hydrological systems.2. Appreciate the role of heat transfer, and in particular convection, in making both the hydrosphere and tectonosphere dynamic.

GEOL 435 : Introduction to Groundwater. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111; or GEOL 330; Math 110 or equivalent.

DESCRIPTION: Introduction to the occurrence, movement, and properties of subsurface water; surface and groundwater relationships.

Course Outcomes
- Demonstrate knowledge of the hydrologic cycle by creating a basin-scale water budget.
- Evaluate the relationship between grain size, sorting, and hydraulic conductivity using Darcy's Law.
- Produce a potentiometric surface map and water table map for a well field.
- Evaluate the relationship between mechanical energy, hydraulic head, and force potential.
- Construct a flow net to describe groundwater flow.
- Evaluate different aquifer test methods for calculating aquifer parameters.
- Evaluate different methods for estimating groundwater recharge rates.
- Describe groundwater flow paths for confined and unconfined aquifers.
- Produce a consulting-type report that synthesizes the groundwater resources, flow paths, and aquifer characteristics of a basin.

HLTH 322 : Environmental Health. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

RECOMMENDED: Hlth 100.

DESCRIPTION: Environmental factors as determinants of human health: ecosystem and population dynamics; biological, chemical, and physical hazards; risk assessment; economic, political, cultural, and genetic factors.

Course Outcomes
- Provide a global perspective of environmental issues impacting human health
- Describe the various biological, chemical and physical hazards of the ambient, indoor, and work environment that can adversely affect human health
- Discuss those determinents and factors that affect human health and the health of the environment
- Describe how environmental management practices may contribute to or help control emerging diseases
- Provide an assessment of those national and international health agencies, programs, and other resources that play critical roles in improving human health relative to environmental factors
- Discuss elements of policy making as they influence environmental health issues

MATH 302 : Mathematics for Engineering 1. (4:4:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Math 113.

DESCRIPTION: Multivariable calculus, linear algebra, and numerical methods.

Course Outcomes

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For more detailed information, please visit the department wiki for this course at Math 302 Wiki.

MATH 303 : Mathematics for Engineering 2. (4:4:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 302

DESCRIPTION: ODEs, Laplace transforms, Fourier series, PDEs.

Course Outcomes

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For a more detailed course description, visit Math 303 Wiki.

MMBIO 221 : General Microbiology. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Any biology course.

RECOMMENDED: Any chemistry course.

DESCRIPTION: Microbial world, emphasizing communicable diseases, their causes and control.

NOTE: Recommended for students seeking a liberal education in microbiology who do not have the prerequisites to take the more advanced courses.

Course Outcomes

- Explain and discuss the ways by which microbiologists study microorganisms.
- Discuss the principle infectious diseases that affect mankind, including how they are transmitted, treated, controlled and prevented.
- Differentiate between the types of microorganisms by identifying relevant structure and their function in the biosphere.
- Propose microbial solutions to global problems.
- Describe how the human body defends itself against infectious agents.

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.

DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

MMBIO 241 : Molecular and Cellular Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBio 240 or concurrent enrollment.

DESCRIPTION: Molecular and cellular biology techniques laboratory.

Course Outcomes

- Practice ethics and integrity by working with groups and following lab rules.*Relates to Program Learning Outcome: A commitment to professional integrity and ethical behavior consistent with themission of the university.
- Learn the basics of experimental design, how to formulate a hypothesis, what controls to use, how to interpret experimental data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Practice scientific communication through written lab questions, exams and oral presentations.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Learn molecular biology laboratory techniques through practical laboratory exercises. Techniques include, spectrophotometry,isolation of DNA and protein, quantification of DNA and protein, techniques used to purify or detect specific proteins, such aschromatography, western blot and ELISA, DNA fingerprinting, polymerase chain reaction and enzyme assays.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology.

MMBIO 261 : Infection and Immunity. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Principles of infectious organisms (principally bacteria and viruses), the diseases they cause, and the role of host immune responses in health and disease.

Course Outcomes

There are no course outcomes available

PDBIO 362 : Advanced Physiology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220

DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.

NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes

- Students will manifest an understanding of how structures at the molecular level lead to properties associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

PDBIO 363 : Advanced Physiology Laboratory. (1:.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 362 or concurrent enrollment; or instructor's consent.

DESCRIPTION: Experiments and exercises in advanced physiology emphasizing human physiology. Computer simulations of muscle function, endocrine disease, and human physiology. Emphasizes problem solving and calculations.

Course Outcomes

- Students will demonstrate the skills required to properly interpret data from scientific experimentation to discover how physiological systems function.
- Students will manifest an understanding of basic physiological principles by modeling how human cells, organs, and organ systems function.
- Students will describe how interactions between human organ systems work to maintain homeostasis.

PDBIO 365 : Pathophysiology. (4:4:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 305; or PDBIO 362

DESCRIPTION: Variations in physiological mechanisms that account for development of common disturbances in normal control and activities of body's organs and organ systems.

Course Outcomes

- Students will exhibit an integrative understanding of the biochemistry, molecular biology, genetics, cell biology, microbiology, environmental biology, and physiology related to the prevention, development, and treatment of common diseases.
- Students will demonstrate through case study analysis a command of problem solving skills related to the diagnosis and treatment of pathophysiological conditions.
- Pupils will manifest a command of the physiology and pathophysiological vocabulary necessary to effectively communicate with other biomedical professionals and the general public.
- Students will be able to articulate the ethical issues related to the treatment and prevention of pathophysiological conditions.
- Students will manifest an increase in their respect for the human body and adopt a life style consistent with this respect.

PHIL 205 : Introduction to Formal Logic. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: History and use of syllogistic and propositional logic; evaluating arguments with Venn diagrams, truth tables, and Copi-style proofs and proof strategies; informal reasoning and fallacies.

Course Outcomes

- Know the basic vocabulary and concepts of formal and informal logic.
- Learn how to appraise validity by refuting invalid arguments and by constructing formal proofs for valid ones.
- Learn how to translate ordinary language into logical symbolism.

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 105 or equivalent.

RECOMMENDED: Concurrent enrollment in Phscs 108.

DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes

There are no course outcomes available

PHSCS 107 : General Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 105 or concurrent enrollment.

DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

Course Outcomes

- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.

- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 106 or concurrent enrollment

DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

Course Outcomes

- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PWS 100 : Living with Plants. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Introduction to principles of plant function and diversity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

- Demonstrate a fundamental knowledge of basic principles and concepts of plant biology (i.e., structure, function, and diversity)
- Cultivate an appreciation for the central importance of plants in the way our world and human society functions
- Provide a conceptual framework of how plants influence the environment
- Practice using the scientific method to better understand plant-environment interactions
- Improve verbal and written communication

PWS 215 : Principles of Range Management. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Overview of rangeland resources and management principles, including rangeland classification, multiple use management, natural resource policy, and grazing management.

Course Outcomes

- Describe rangeland physical characteristics, types, physiology, and ecology
- To understand the principles of stewardship and how they apply to Rangelands
- To understand the importance of rangeland grazing, how it is managed, and nutrient needs of livestock and wildlife
- Describe multiple use management and its implications to wildlife and livestock
- To improve reading and writing skills relating to scientific research

PWS 225 : Principles of Wildlife and Fisheries Management. (3:3:0)

WHEN TAUGHT: Winter

RECOMMENDED: PWS 115.

DESCRIPTION: Basic principles of fish and wildlife management, their habitats, and their human users. Ecological concepts, population dynamics, nutrition, behavior, population assessment, management strategies, habitat sampling and management.

Course Outcomes

- Learning Outcome #1: Identify and articulate stewardship for the creation as a basis for professional judgment.This course not only provides an understanding of tools used by wildlife and fisheries managers to restore, revive, and maintain wildlife and fish populations, but also discusses our stewardship roles and responsibilities for those aspects of the creation.
- Learning Outcome #2: Identify wildland plants, soils, and wildlife species and understand how they function in the environment.This course introduces students to a number of wildlife and fish species, and basic ecological concepts as they relate to wildlife and fisheries. Students will understand the ecological roles, habitat needs, and interactions of fish and wildlife at various levels in an ecosystem
- Learning Outcome #3: Apply an understanding of ecological processes to wildlife management.This course includes an extensive overview of basic ecological processes and how to use them for fish and wildlife management.
- Learning Outcome #4: Demonstrate the ability to apply the scientific method and analytical thinking to ecological and management issues.In this course students will be rigorously taught the scientific method and given opportunities to demonstrate the understanding through fish and wildlife management problem solving. They will have writing assignments that provide opportunities for the synthesis and expression of the depth of their understanding. The term paper required in this course may be used for one of the “three written papers relating to stewardship ethics and management situations” that will be placed in the student’s portfolio required for graduation with a Wildlife and Wildlands Conservation BS degree.

PWS 275 : Genetics and Reproduction. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Any general biology course.

DESCRIPTION: Principles of inheritance.

Course Outcomes

- Identify and articulate principles of stewardship as a basis for professional judgment.
- Apply knowledge of genetics to conservation and management of natural populations.
- Provide a foundation in the basic and applied principles of genetics for natural resource management andconservation.

PWS 303 : Soils Conservation and Resources. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 282 & CHEM 105; or PWS 282 & CHEM 101; PWS 100 or equivalent; Math 110 or equivalent.

RECOMMENDED: Geol 111.

DESCRIPTION: Taxonomy of world soils; conservation and management of agricultural, wildland, wetland, and urban soils.

Course Outcomes

- Understand soil physics, chemistry, taxonomy, and water movement to maintain natural resources.
- Apply soil conservation practices and principles to regions sensitive to soil degradation.
- Understand the history, development, and terminology associated with USDA Soil Taxonomy and be familiar with other soil taxonomic systems. Recognize soil orders and suborders from the physical and chemical characteristics of the soil

PWS 306 : Soil Fertility and Plant Nutrition Laboratory. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 305 or concurrent enrollment.

DESCRIPTION: Laboratory for studying nutrient-supplying power of soils, nutrient deficiencies and toxicities, and plant adaptation to nutritional stresses.

Course Outcomes

- Gain a fundamental understanding of the investigative techniques necessary to solve problems associated with water and soil resources and management
- Understand the basic diagnostic steps to test water and soil quality
- Improve mathematical and statistical skills related to nutrient, salinity, sodicity, and toxicity evaluation and management

PWS 325 : Fisheries and Wetlands Management. (3:2:3)

WHEN TAUGHT: Fall

RECOMMENDED: PWS 225 or equivalent.

DESCRIPTION: Principles of fisheries and wetlands mangement, emphasizing managing fish populations and their diverse micro- and macro-habitats within the context of community and ecosystem dynamics. Case studies and models used to evaluate growth, recruitments, and mortality in age-structured populations in relationship to the dynamics of watershed and wetland landscapes.

Course Outcomes

- Understand ecological aspects of fisheries and wetland systems.
- Learn important aspects of fisheries and wetland management.
- Integrate concepts taught in class to other ecological systems.

PWS 330 : Rangeland Plant Identification and Ecology. (3:2:3)

WHEN TAUGHT: Winter

DESCRIPTION: Identification, characteristics, phenology, distribution, site adaptation, forage value, and response to management of significant range and pasture plants.

Course Outcomes

- Students will be able to sight identify many common range plants of North America
- Students will be able to use a grass key to identify unknown grasses
- Students will be able to pair symptoms of sick animals with poisonous plants that may have been consumed

PWS 331 : Science of Plant Pest Control. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Management of plant health problems, namely weed, insect, and disease, through integrated pest management and proper pesticide management and safety.

Course Outcomes

- Enhance critical thinking skills.
- Develop a framework for decision-making and implementation in applied pest management and ecology.
- Recommend control options for plant pest management.
- Safely and accurately apply plant pesticides in urban and agricultural environments.
- Identify various plant pest control measures.
- Improve communication and interpersonal skills.

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes

- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank

records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

PWS 344 : Natural History of Wildlife. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

RECOMMENDED: PWS 225 or equivalent.

DESCRIPTION: Wildlife species and their habitats, including ecology, life histories, adaptations, behavior, genetics and population viability variables, and the ethics of global stewardship. Field trips required.

Course Outcomes
- In this course, students will be rigorously taught the scientific method and given opportunities to demonstrate the understanding through wildlife ecology problem solving. They will have writing assignments that provide opportunities for the synthesis and expression of the depth of their understanding.
- This course introduces students to a number of wildlife and fish species, and basic ecological concepts as they relate to wildlife and fisheries. Students will understand the biology, ecological roles, habitat needs, ecological adaptations, and interactions of fish and wildlife at various levels in an ecosystem.
- Be able to define “natural history” and be able to describe basic concepts and principles that comprise the natural history of an organism
- Gain an appreciation for the diversity of lifestyles among vertebrates
- Develop critical reading and thinking skills
- Improve oral and written communication skills

PWS 355 : Rangeland Vegetation Measurements and Analysis. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Field methodologies for vegetation inventories and analysis (density, biomass, cover, frequency, utilization, etc.) in wildland settings.

Course Outcomes
- Students will be able to demonstrate, through lab exercises and write-ups, an understanding of ecological processes that drive secondary succession in wildland ecosystems which in turn impact management decisions.
- Students will be able to apply vegetation data collection techniques to quantify vegetation and make interpretations used in resource management decisions.

PWS 402 : Urban Soils and Water. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 100 & PWS 282.

DESCRIPTION: Principles of water management, soil physics, and soil fertility used in a problem-solving environment addressing current challenges in managing soils and water in the urban landscape.

Course Outcomes
- Students will apply concepts assimilated in previous courses to solve problems associated with at least five real world case studies. By assignment, eachwill develop an assessment matrix for use in problem solving situations encountered in their future careers.
- A primary goal of this course is for students to greatly increase their knowledge base of scientific principles related to plant, water, soil, nutrient, and pest management. This will be assessed by examination at beginning and end of semester with a target of at least doubling of average scores.
- Students will successfully writeseveral documents, including a research paper and diagnostic key at an upperclassmen level of writing. Students will actively participate in team problem solving and a Group presentation.
- Students will develop at least one individual and group item to add to their portfolio. Development of a diagnostic key, writing an evaluation paper, development of a group presentation and completion of a semester project could each contribute to portfolios.

PWS 411 : Watershed Management. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: BIO 350; or PWS 350

DESCRIPTION: Processes and management of the hydrologic cycle of forests and rangelands.

Course Outcomes
- Students will understand the history and policy that drives water management in the western US.
- Students will understand ecological and hydrological processes and concepts and apply them to watershed management actions such as harvesting, grazing, and restoration.
- Students will be able to apply assessment and classification tools to watersheds and their components to determine how management actions affect hydrologic responses.

PWS 416 : Rangeland Vegetation Improvement. (3:2:3)

WHEN TAUGHT: Fall

RECOMMENDED: PWS 330, 350.

DESCRIPTION: Habitat improvement for domestic and wild animals. Plant control by mechanical equipment, herbicides, and prescribed fire. Restoration of disturbed lands.

NOTE: Field trips required.

Course Outcomes
- Apply the historical and successional history of land to current rangeland vegetation conditions and treatments
- Describe and plan biological, chemical, mechanical methods, and fire to achieve land management goals.
- Assess site potential and fuels relative to potential vegetation changes with and without management.
- Apply and plan revegetation, fire rehabilitation, and restoration practices to rangelands.
- Integrate plant control, revegetation and other restoration practices to meet land management goals
- Become familiar with approaches, practices, and outcomes of rangeland vegetation improvements in actual field situations.

PWS 417 : Rangeland Planning and GIS. (3:2:3)

WHEN TAUGHT: Winter

RECOMMENDED: PWS 215, 225, 350.

DESCRIPTION: Development of a multiple-use natural resource plan for watershed forestry, recreation, wildlife, and livestock. Policies that govern planning and conflict resolution.

Course Outcomes
- Identify and articulate stewardship for the creation as a basis for professional judgment.
- Apply an understanding of ecological processes to wildland management
- Demonstrate ability to apply the scientific method and analytical thinking to ecological and management issues.

PWS 419 : Forest Management and Ecology. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Managing forests, emphasizing ecosystem managment.

NOTE: Field trips required.

Course Outcomes
- 1. Articulate their role as stewards over forested environments.
- 2. Appreciate the diversity of forests world-wide and their importance to human populations.
- 3. Apply knowledge of forest structure, function, and process in making management decisions
- 4. Be able to quantify forest structure and production
- 5. Recognize forest pests and diseases and know appropriate control techniques.
- 6. Relate forests to wildlife habitat
- 7. Identify 75 tree species located in Utah and on BYU campus.

PWS 431 : Plant Health Diagnostics. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Diagnosing plant health problems; pest biology and identification (weed, insect, and disease).

Course Outcomes
There are no course outcomes available

PWS 440 : Plant Physiology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: GE Biological Science requirement; college chemistry

RECOMMENDED: Chem 285; or 351, 352.

DESCRIPTION: Photosynthesis, respiration, water relations, mineral nutrition, growth of flowering plants.

Course Outcomes
- Students will be fluent in understanding plant function at the molecular, biochemical and whole plant levels
- Students will understand the connections between plant function and ecosystem processes
- Student will practice applying the scientific method in order to develop critical thinking and problem solving skills
- Student will engage in learning activities that increase there writing and speaking proficiency

PWS 511 : Environmental Biophysics: Soil and Plant Water Relations. (4:3:2)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Phscs 105 and PWS 282; or equivalents.

DESCRIPTION: Integrating biological, physical, and chemical processes of water and solute movements through the soil-plant-atmosphere continuum.

Course Outcomes
- Students will take a pre- and post-semester exam and at least double their score to assess understanding of the importance of physics in biological systems.

PWS 514 : Soil Microbiology. (2:2:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: Chem 105 and 106; or equivalents.

DESCRIPTION: Ecology and role of soil microorganisms in biogeochemical cycles, decomposition of organic matter

and waste materials, and bioremediation of contaminated soils and water.

Course Outcomes
- Ecology and role of soil microorganisms in nutrient cycling, decomposition of organic matter and waste materials, and degradation of agricultural chemicals in soils

PWS 540 : Plant Response to the Environment. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: PWS 440 or equivalent; PWS 494R or concurrent enrollment.

DESCRIPTION: Advanced plant physiological ecology principles.

Course Outcomes
- Students will learn to apply the scientific method in order to become more proficient and independent learners
- Students will be able to conceptualize the physiological mechanisms by which plants sense and respond to their environment and how that impacts ecological systems.
- Students will participate in learning exercises that teaches them how to gather, interpret and communicate scientific information.
- Students will be exposed to the instrumentation and techniques commonly used to gather data in the field of plant physiological ecology.

PWS 551 : Quantitative Ecology. (3:2:3)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: Bio 350 or equivalent; Stat 121 or 511 or concurrent enrollment.

DESCRIPTION: Quantitative methods for ecological sampling and data analysis.

Course Outcomes
- Demonstrate application of the scientific and analytical methods in ecological research.
- Learn how and when to use appropriate sampling and a data analysis techniques for ecological inquiry.
- Demonstrate ability to synthesize literature relevant to a research project.
- Demonstrate oral and written scientific communications skills.

Federal Register Requirements

The federal register requirements for environmental science ecology or physical science emphasis can be met by choosing appropriate electives. Ecology requires 30 semester hours of basic and applied biology, including at least 9 semester hours of ecology and 12 hours of physical and mathematical sciences. Physical science requires 25 semester hours of physical sciences (chemistry, physics, math, etc.)

*Hours include courses that may fulfill university core requirements.

Program Requirements | View MAP | View Program Outcomes

1. Complete the following core courses:

BIO 165 : Introduction to Bioinformatics. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Introduction to basic concepts in bioinformatics. Standard bioinformatic applications.

Course Outcomes
There are no course outcomes available

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

Course Outcomes

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

Course Outcomes

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.

- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.

DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

PDBIO 120 : Science of Biology. (2:2:1)

OFFERED: Honors also

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes

There are no course outcomes available

PDBIO 360 : Cell Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Fundamentals of cell structure and function with reference to analytical methods used by cell biologists. Practice in designing, executing, and interpreting relative experiments.

Course Outcomes

- Students will demonstrate knowledge of the molecular architecture of the nucleus, including the nuclear envelope, nucleoplasm and nucleolus, chromatin, and the nuclear pore.
- Students will demonstrate an understanding of protein transport, including nuclear import and export and vesicular transport through the secretory and sorting pathways.
- Students will demonstrate knowledge of the molecular and cellular structure and dynamics of cytoskeletal systems.
- Students will be able to apply the basic cell biological principles in outcomes 1-3 to more complicated cellular processes, including cell adhesion, cell migration, cell polarity, cell division, cancer, and development.
- Students will demonstrate the ability to generate hypothesis about how cell biological systems work at the molecular level and design experiments that test that hypothesis.
- Students will demonstrate competence in interpreting original raw data from cell biology experiments, including microscopy, protein biochemistry, molecular biology, and genetics strategies
- Students will demonstrate the ability to critically evaluate primary cell biology literature, including the ability to evaluate the design and interpretation of experimental data.

PWS 188 : Introduction to Genetics and Biotechnology. (2:2:0)

WHEN TAUGHT: Winter

RECOMMENDED: PDBio 120 or concurrent enrollment.

DESCRIPTION: Orientation to the genetics and biotechnology major and introduction to the scientific field, including undergraduate mentored research, internships, extracurricular activities, professional careers, scientific literature, and applications of biotechnology in biomedicine, plant and animal improvement, and environmental remediation. Developing fluency in primary vocabulary of the

discipline, familiarization with key technologies, writing reviews of primary literature and portfolio establishment, experiencing basic laboratory protocols.

Course Outcomes
- Students can understand and discuss basic concepts underlying genetics, biotechnology, and genomics.
- Students can explain basic operations and applications of existing and emerging technologies for applied genomics.
- Students can readily access primary literature in the discipline and draw upon these sources to compose appropriately formatted literature reviews.
- Students can identify and apply for undergraduate educational research opportunities (BYU mentored research and external internships).
- Students can describe a broad range of careers for geneticists and biotechnologists.

PWS 288 : Mentored Laboratory Techniques. (2:.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105

DESCRIPTION: Mentored, systematic instruction in basic biotechnology techniques and their application in addressing molecular genetic research questions.

Course Outcomes
There are no course outcomes available

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes
- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

PWS 468 : (PWS-Bio-MMBio) Genomics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PWS 340

DESCRIPTION: Current analysis of genes and genomes; computational and statistical approaches for analyzing genomic data, including genome sequencing and annotation, gene expression and the transcriptome, proteomics and functional genomics, and genetic variation and SNPs.

Course Outcomes
- Students can describe the technology and process used to sequence genomes (de novo and re-sequencing)
- Students can complete a series of exercises with data representing genomic experiments (analyze and interpret)
- Students can outline techniques and concepts for assessing genomic parameters such as methylation, gene expression, DNA-binding motifs, metagenomics, and comparative genomics.

PWS 488 : Readings in Biotechnology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 340 & PDBIO 360

RECOMMENDED: PWS 440 or PDBio 362.

DESCRIPTION: Capstone course for the genetics and biotechnology major focusing on scientific literature relating to the biotechnological improvement of plants, animals, and microbes.

NOTE: Course should be taken the last year before graduation.

Course Outcomes
- Students can describe a variety of techniques and experimental approaches used by biotechnologists to improve plants, animals, microbes and human health.
- Students can deliver an oral presentation summarizing a scientific paper related to the field of biotechnology.
- Students can produce a written review synthesizing scientific findings related to recent biotechnological advances.

2. Complete 26 hours from one of the following tracks:

   A. Plant Genetics and biotechnology core track:
      1. Complete the following:

BIO 220B : Biological Diversity: Plants. (4:3:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Comparative organization and evolutionary significance of morphological,

physiological, reproductive, and ecological differences in fungi, algae, and principal groups of land plants. Laboratory included.

Course Outcomes
- Students will be able to discuss differences between cyanobacteria, algae, bryophytes, non-seed vascular plants, gymnosperms, flowering plants, and fungi with repsect to their lifecycles, characteristic morphologies, and biological roles.
- Students will develop the skills necessary to understand and critically apply evolutionary logic including the use of phylogeny and tree-thinking to formulate and test hypotheses that explain biological diversity
- Students will be able to continue to explore related topics with confidence and understanding throughout their lives.

BIO 420 : Evolutionary Biology. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBIO 240 & PWS 340
RECOMMENDED: Concurrent enrollment in Bio 421.
DESCRIPTION: Intensive examination of evolution as the conceptual cornerstone of biology.

Course Outcomes
- Students will be able to describe the history and development of evolutionary thought.
- Students will be able to list and describe the evidence for evolution and its required corollaries.
- Students will be able to describe the mechanisms by which evolution occurs. Provide detailed explanations of the the processes of evolution by mutation, migration, genetic drift, non-random mating, and natural selection.
- Students will be able to explain adaptation, providing examples from several different fields of biology (e.g., cell biology, physiology, conservation biology, bioinformatics, medicine, behavior, etc.).
- Students will be able to describe the history of life on earth. Identify major evolutionary transitions over time, and explain the tools and evidence that support current hypotheses of the history of life.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: CHEM 105; or CHEM 111
DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.
NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes
- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: CHEM 351; or CHEM 351M
DESCRIPTION: Continuation of Chem 351.

Course Outcomes
- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120
DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.
NOTE: For chemistry majors and students in biological sciences who contemplate pursuing

advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes
- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

PWS 100 : Living with Plants. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Introduction to principles of plant function and diversity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
- Demonstrate a fundamental knowledge of basic principles and concepts of plant biology (i.e., structure, function, and diversity)
- Cultivate an appreciation for the central importance of plants in the way our world and human society functions
- Provide a conceptual framework of how plants influence the environment
- Practice using the scientific method to better understand plant-environment interactions
- Improve verbal and written communication

PWS 440 : Plant Physiology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: GE Biological Science requirement; college chemistry

RECOMMENDED: Chem 285; or 351, 352.

DESCRIPTION: Photosynthesis, respiration, water relations, mineral nutrition, growth of flowering plants.

Course Outcomes
- Students will be fluent in understanding plant function at the molecular, biochemical and whole plant levels
- Students will understand the connections between plant function and ecosystem processes
- Student will practice applying the scientific method in order to develop critical thinking and problem solving skills
- Student will engage in learning activities that increase there writing and speaking proficiency

PWS 494R : Mentored Learning Experience. (1-6:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Topics vary.

NOTE: Registration required for mentored experiences.

Course Outcomes
- Design and/or participate in basic experiments attempting to answer questions in biochemistry, biotechnology, genetics, molecular biology, and soil science
- Generate and analyze experimental results for publications or presentations at professional meetings
- Learn how to be an effective and efficient mentor

(2 hours required)

2. Complete an additional 3 hours from the general major electives list below.

B. Animal genetics and biotechnology core track:

1. Complete the following:

BIO 420 : Evolutionary Biology. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PWS 340

RECOMMENDED: Concurrent enrollment in Bio 421.

DESCRIPTION: Intensive examination of evolution as the conceptual cornerstone of biology.

Course Outcomes
- Students will be able to describe the history and development of evolutionary thought.
- Students will be able to list and describe the evidence for evolution and its required corollaries.
- Students will be able to describe the mechanisms by which evolution occurs. Provide detailed explanations of the the processes of evolution by mutation, migration, genetic drift, non-random mating, and natural selection.
- Students will be able to explain adaptation, providing examples from several different fields of biology (e.g., cell biology, physiology, conservation biology, bioinformatics,

medicine, behavior, etc.).
- Students will be able to describe the history of life on earth. Identify major evolutionary transitions over time, and explain the tools and evidence that support current hypotheses of the history of life.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes
- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

Course Outcomes
- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes
- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

2. Complete one course from the following:

BIO 463 : Genetics of Human Disease. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 340

DESCRIPTION: Examining the application of genetics to understanding and treatment of human disease. Functional consequences of mutations; use of model organisms; linkage and association analysis of complex traits; pharmacogenetics; ethical considerations.

Course Outcomes

- Understand and explain the different types of genetic variants, how they can be typed and how they can be used to understand the genetic architecture of human disease.
- Understand linkage disequilibrium in the human genome and the role it plays in the search for genetic risk factors for human disease
- Understand and use basic statistics and software for analyzing the correlation between genetic markers and risk for disease.
- Understand and explain how model organisms contribute to our understanding of the genetics of human disease.
- Demonstrate the ability to obtain, aggregate and present information about the current knowledge of the genetics of a human disease.

PDBIO 482 : Developmental Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PDBIO 360

RECOMMENDED: PDBio 325.

DESCRIPTION: Invertebrate and vertebrate developmental biology. Embryonic gastrulation, neurulation, pattering, etc. Modern approaches and research strategies. Emphasizes gene function, cell signaling, signal transduction during embryogenesis.

Course Outcomes

- Students will be able to generally describe the early development (from fertilization to axis formation) of one invertebrate and one vertebrate model organism.
- Students will be able to generally describe the concepts of cellular competence, induction, specification, commitment and differentiation in embryonic development.
- Students will be able to give two examples of organogenesis, including genes and signal transduction pathways that lead to organ system formation.
- Students will be able to explain embryonic patterning, using examples that include genes known to act in patterning events.
- Students will be able to explain at least two concepts in developmental biology that overlap with other sciences, such as stem cell research, cancer research, evolutionary sciences, or neuroscience.
- Students will be able to discern and summarize the current state of knowledge on a given topic, construct pioneering research questions on that topic, and propose experiments aimed at answering those questions.

3. Complete one of the following:

BIO 380 : Comparative Animal Physiology and Anatomy. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 220A or instructor's consent.

DESCRIPTION: Structure and function of animal organ systems; structural and physiological responses to demands of and changes in environment; evolutionary constraints on anatomy and physiology.

Course Outcomes

- Students will demonstrate a fundamental knowledge of comparative vertebrate animal physiology and anatomy.
- Students will develop critical thinking skills while learning concepts and understanding the tools used by comparative vertebrate animal physiologists and anatomists to study function and structure.
- Students will use physiological and anatomical knowledge to enhance their personal lives.
- Students will use their skills and knowledge in comparative vertebrate animal physiology and anatomy to secure employment or to advance in higher education in biology-related disciplines.
- Students will develop an understanding of physiologic isotopic techniques utilized to indicate energy sources, trophic levels, body water, and latitudinal and altitudinal animal migration reflected by stable isotopes of carbon, nitrogen, hydrogen and oxygen.

PDBIO 362 : Advanced Physiology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220

DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.

NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes

- Students will manifest an understanding of how structures at the molecular level lead to properties associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

4. Complete two credit hours from one of the following:

BIO 494R : Mentored Research. (1-6:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Supervisor's consent.

DESCRIPTION: Independent student research under faculty supervision.

Course Outcomes
- Students will demonstrate an understanding of the methods of scientific inquiry.
- Students will demonstrate an ability to design and implement a research project in a specialized area.
- Students will effectively interpret, analyze, and present results of experimentation to others.
- Students will show an appreciation for and understanding of the specialized field.

: Aquatic Biology.

Course Outcomes

: Bioinformatics.

Course Outcomes

: Ecology.

Course Outcomes

: Electron Microscopy.

Course Outcomes

: Entomology.

Course Outcomes

: Evolution.

Course Outcomes

: Marine Biology.

Course Outcomes

: Plant Biology.

Course Outcomes

: Systematics.

Course Outcomes

: Veterinary Science.

Course Outcomes

: Medicinal Botany.

Course Outcomes

: Plant Biochemistry.

Course Outcomes

: Fungal Biology.

Course Outcomes

CHEM 497R : Undergraduate Special Problems. (.5-6:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Instructor's consent and Chem 201 or concurrent enrollment or special safety training.

DESCRIPTION: Undergraduate research experience.

Course Outcomes
- The student will participate in mentored research with a specific research group under the tutelage of a faculty member, and generate original scientific results.

MMBIO 494R : Mentored Research. (.5-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

DESCRIPTION: Mentored research.

Course Outcomes
- Perform current techniques and carry out experiments in a professional manner. Gather data and evaluate results.
- Properly notate work and results in a scientific notebook. Participate in the preparation of scientific papers and presentations.
- Develop, design and troubleshoot experimental procedures.
- Form relationships with a research mentor and other students in the lab. Begin networking and professional activities.
- Read, and use primary literature to design experiements and advance a project. Present and evaluate articles from the primary literature

NDFS 494R : Undergraduate Research in Nutrition, Dietetics, or Food Science. (1-3:0:9)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Instructor's consent.
DESCRIPTION: Mentored research experience.

Course Outcomes
- Students will develop skillsets in data collection, data entry, and/or data analysis methods.
- Students will develop an increased understanding of the most up-to-date findings in the areas we are researching in the lab.
- To coordinate our research efforts in the lab
- Students will gain experience presenting research to the group and will increase their critical thinking skills discussing original research articles.

PDBIO 494R : Undergraduate Research in Physiology and Developmental Biology. (1-4:ARR:ARR)
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Basic (entry level) research laboratory experience for students interested in physiology and developmental biology.

Course Outcomes
- Students will demonstrate the ability to properly perform basic laboratory-specific techniques.
- Students will complete laboratory-specific safety training.

PWS 494R : Mentored Learning Experience. (1-6:ARR:ARR)
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Topics vary.
NOTE: Registration required for mentored experiences.

Course Outcomes
- Design and/or participate in basic experiments attempting to answer questions in biochemistry, biotechnology, genetics, molecular biology, and soil science
- Generate and analyze experimental results for publications or presentations at professional meetings
- Learn how to be an effective and efficient mentor

5. Complete an additional 6–7 hours from the general major electives list below.

C. Microbial genetics and biotechnology core track:
1. Complete the following:

BIO 420 : Evolutionary Biology. (2:2:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBIO 240 & PWS 340
RECOMMENDED: Concurrent enrollment in Bio 421.
DESCRIPTION: Intensive examination of evolution as the conceptual cornerstone of biology.

Course Outcomes
- Students will be able to describe the history and development of evolutionary thought.
- Students will be able to list and describe the evidence for evolution and its required corollaries.
- Students will be able to describe the mechanisms by which evolution occurs. Provide detailed explanations of the the processes of evolution by mutation, migration, genetic drift, non-random mating, and natural selection.
- Students will be able to explain adaptation, providing examples from several different fields of biology (e.g., cell biology, physiology, conservation biology, bioinformatics, medicine, behavior, etc.).
- Students will be able to describe the history of life on earth. Identify major evolutionary transitions over time, and explain the tools and evidence that support current hypotheses of the history of life.

CHEM 351 : Organic Chemistry. (3:3:1)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: CHEM 105; or CHEM 111
DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.
NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes
- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.

- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

Course Outcomes

- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes

- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

MMBIO 151 : Introduction to Microbiology. (4:3:3)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Chem 105 or concurrent enrollment.

DESCRIPTION: Principles of prokaryotic biology emphasizing cell structure, function, and metabolism. Introduction to bacterial genetics, microbial diversity, and microbial ecology.

Course Outcomes

- Understand what microbes are, what they are composed of, how they are built, and their phylogenetic relationships to the living world. Be able to distinguish between eukaryotes, prokaryotes, and viruses.*Relates to Program Learning Outcome: "Exhibit mastery of four of the following six principal areas of the discipline" five of which are microbial physiology, microbial genetics, microbial ecology, medical microbiology, and virology
- Become familiar with the tools of microbiology through both lecture and labs and demonstrate basic aseptic technique. Develop proficiency in working with bacteria including streaking for isolation and performing growth experiments.*Relates to Program Learning Outcome: "Exhibit mastery of four of the following six principal areas of the discipline" three of which are microbial physiology, microbial genetics, microbial ecology
- Formulate questions, testable hypotheses and implement appropriate experimental protocol. Collect and analyze data and be able to draw appropriate conclusions.*Relates to Program Learning Outcome: “Devise experiments with appropriate hypotheses and controls.”
- Integrate knowledge to make informed judgments on tests, lab reports, lab presentations and lab write-ups*Relates to Program Learning Outcome: "Communicate scientific information using both oral and written methods"
- Obtain a deeper appreciation for the complexity, diversity and purposes of life.*Relates to Program Learning Outcome: "Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological principles"

MMBIO 360 : Microbial Genetics. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBIO 240

DESCRIPTION: How DNA governs complex bacterial functions. Classical and modern approaches to gene discovery, including genetic screens, gene mapping, targeted genetic manipulations, and analyzing gene activity.

Course Outcomes
There are no course outcomes available

MMBIO 461 : Advanced Bacterial Physiology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481 & MMBIO 151

DESCRIPTION: Principles of prokaryotic physiology, including cell structure and function, gene regulation, and biochemical processes; focusing on the unique aspects of prokaryotic biology.

Course Outcomes
- Students will demonstrate an advanced understanding of selected topics in microbial physiology (cell structure, growth, biosynthesis, transport, etc.) through their participation in classroom discussions, writing assignments and oral presentations.
- Students will demonstrate the ability to read, comprehend and communicate current research in microbial physiology by making Powerpoint presentations to the class.
- Students will write a scientific review article on a topic of their choice related to microbial physiology.

2. Complete two credit hours from one of the following:

MMBIO 494R : Mentored Research. (.5-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Mentor's consent.

DESCRIPTION: Mentored research.

Course Outcomes
- Perform current techniques and carry out experiments in a professional manner. Gather data and evaluate results.
- Properly notate work and results in a scientific notebook. Participate in the preparation of scientific papers and presentations.
- Develop, design and troubleshoot experimental procedures.
- Form relationships with a research mentor and other students in the lab. Begin networking and professional activities.
- Read, and use primary literature to design experiements and advance a project. Present and evaluate articles from the primary literature

PWS 494R : Mentored Learning Experience. (1-6:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Topics vary.

NOTE: Registration required for mentored experiences.

Course Outcomes
- Design and/or participate in basic experiments attempting to answer questions in biochemistry, biotechnology, genetics, molecular biology, and soil science
- Generate and analyze experimental results for publications or presentations at professional meetings
- Learn how to be an effective and efficient mentor

3. Complete an additional 2 hours from the general major electives list below.

D. Bio-business core track:

1. Complete the following:

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.

DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

Course Outcomes
- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.
- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

BUS M 201 : Financial Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Acc 200 or equivalent.

DESCRIPTION: Financial statement analysis, financial planning, sources of financing, working

capital management, risk and return, and valuation.

Course Outcomes
- Use fundamental analysis to conduct a firm performance evaluation.
- Construct a financial forecast for a term.
- Employ time value of money to solve common financial problems.
- Make corporate investment decisions using capital budgeting.
- Be able to value firms, bonds, and stocks.
- Understand how entrepreneurial and corporate finance differ.

BUS M 488 : Agribusiness Management 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: ACC 200 & BUS M 201 & ECON 110; or ACC 200 & FIN 201 & ECON 110

DESCRIPTION: Concepts, tools, and approaches to understanding competitive forces and the development of sustainable competitive advantage for firms in the food, fiber, and horticulture industries.

Course Outcomes
- Understand the concepts and models of strategic management presented in the course.
- Appreciate the roles, responsibilities, and potential influence of business leaders.
- Further develop the personal sense of ethics and integrity that guide decision making in business, community, church, and family relationships.
- Analyze the competitive situation facing a firm using the models of strategic management presented in class.
- Apply the models of strategic management presented in the course to arrive at recommendations that will help organizations achieve and sustain competitive advantage.
- Persuasively communicate analytical conclusions and recommendations in verbal and written form.
- Effectively participate in group work.

CHEM 285 : Introductory Bio-organic Chemistry. (4:4:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

DESCRIPTION: Principles of organic chemistry and biochemistry relating to biomolecule structure and function.

Course Outcomes
- Students will understand the metabolism of carbohydrates, lipids, and proteins in humans. They will be able to describe in structures and words the metabolism of sugars through the pathways of glycolysis, the citric acid cycle, and the electron transport chain.
- Students will understand the structure and reactivity of organic functional groups, such as alcohols, aldehydes, carboxylic acids, and amides. For example, students will learn that aldehydes and ketones typically undergo addition reactions.
- Students will understand the structure and reactivity of the biomolecules that have those functional groups. For example, students will be able to demonstrate that carbohydrates are aldehydes and ketones that undergo addition reactions to form hemiacetals and polysaccharides with acetal linkages.

ORG B 320 : Organizational Effectiveness. (3:Arr:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Theories and concepts for creating effective organizations, e.g., individual, group, and organizational processes and human resource functions, including selection, compensation, and performance management.

NOTE: Taught online.

Course Outcomes
There are no course outcomes available

2. Complete one of the following:

BUS M 241 : Marketing Management. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Marketing's role in society and the firm, marketing opportunities, the consumer market, and management of marketing mix.

Course Outcomes
- Understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers.
- Describe how specific firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Design a marketing plan for a new venture by applying the appropriate tools and approaches studied

BUS M 489 : Agribusiness Management 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: ACC 200 & BUS M 201 & ECON 110; or ACC 200 & FIN 201 & ECON 110
DESCRIPTION: Developing and implementing marketing plans and programs for companies participating in the value chain of agribusiness industries.

Course Outcomes
- Students will understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers in life sciences industries.
- Describe how life sciences firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Students will understand the basics of the market research process.
- Students will study current marketing techniques in life sciences-based industries.
- Students will learn to apply faith-based, moral reasoning and personal integrity in professional life.
- Students will learn to work effectively within a team and to communicate effectively in business environments.

3. Complete one of the following:

BUS M 371R : Entrepreneurship Lecture Series. (1:1:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Lectures by successful entrepreneurs on subjects significant to entrepreneur-type opportunities.

Course Outcomes
- Recognize and resolve ethical challenges and choices in specific organizational contexts.
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life

BUS M 380 : Executive Lectures. (1:1:0)
WHEN TAUGHT: Fall
DESCRIPTION: Lectures by top executives on subjects significant to executive leadership.

Course Outcomes
- Recognize and resolve ethical challenges and choices in specific organizational contexts.
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life.

4. Complete an additional 6 hours from the general major electives list below.

General Major Electives:

BIO 220A : Biological Diversity: Animals. (4:3:3)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: PDBIO 120; or BIO 130
DESCRIPTION: Comparative organization and evolutionary significance of morphological, physiological, reproductive, and ecological differences in invertebrates and vertebrates. Laboratory included.

Course Outcomes
- Students will be able to discuss the broad patterns of the evolution of the clade Animalia, emphasizing the relationships among major sub-clades (phyla), the unique biological attributes that define these clades, and the novel changes in morphology over major transitions (unicellular to multicellular; acoelomate to pseudocoelomate to coelomate body plans, bilaterial vs radial symmetry, origins of exoskeletons, gill slits, notochord, crania & vertebral columns, etc.).
- Students will develop the skills necessary to understand the terminology of phylogenetic systematics and methods used to recover the "tree of life", the logic behind the hierarchy (i.e., the only possible outcome of the process of "descent with modification"), and critically apply evolutionary reasoning, including the use of phylogeny and tree-thinking, to formulate and test hypotheses that explain biological diversity.
- Students will have the intellectual tools to continue to explore related topics with confidence and understanding throughout their lives, and a deeper appreciation for the diversity of life on earth.

BIO 220B : Biological Diversity: Plants. (4:3:3)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: PDBIO 120; or BIO 130
DESCRIPTION: Comparative organization and evolutionary significance of morphological, physiological, reproductive, and ecological differences in fungi, algae, and principal groups of land plants. Laboratory included.

Course Outcomes
- Students will be able to discuss differences between cyanobacteria, algae, bryophytes, non-seed vascular plants, gymnosperms, flowering plants, and fungi with repsect to their lifecycles, characteristic morphologies, and biological roles.
- Students will develop the skills necessary to understand and critically apply evolutionary logic including the use of phylogeny and tree-thinking to formulate and test hypotheses that explain biological diversity
- Students will be able to continue to explore related topics with confidence and understanding throughout their lives.

BIO 350 : Ecology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Distribution and abundance of organisms and their interactions with the physical and biotic components of the earth.

Course Outcomes

- Understand the major physical processes that form and characterize the biosphere, including global scale energy flow, the carbon cycle, climate, and soil formation.
- Understand the processes that drive major levels of organization of the biotic world, including energetics in the ecosystem, population dynamics, and species interactions.
- Understand the importance of writing as a way of synthesizing and solidifying critical thought.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Understand the importance of ecology to issues regarding human well-being
- See the connectivity and relevance of ecology to other fields of study

BIO 365 : Computational Biology. (3:2:1)

WHEN TAUGHT: Fall

PREREQUISITE: C S 240

DESCRIPTION: Computational analysis of DNA data; introduction to bioinformatics databasing using Perl and SQL; configuration of UNIX workstations for bioinformatics analyses.

Course Outcomes

- To provide practical experience in using computational approaches to address biological problems.
- Describe general areas of computational problems in biology (alignment, estimation, tree searches, molecular modeling, gene prediction) and learn about existing computational approaches to these general problems.
- Learn basic computational tools for statistical inference (Bayesian, Maximum likelihood, Markov Chain Monte Carlo, Hidden Markov Chain)
- Apply programming skills to alignment problems through the development of novel tools and software for alignment
- Apply programming skills to tree searching problems through the development of novel tools software
- Apply programming tools to gene prediction problems through the development of novel tools and software
- Develop ability to use existing and write new database code to access and manipulate genetic data

BIO 370 : Bioethics. (2:1:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Introductory biology course.

DESCRIPTION: In-depth lecture and small group discussion of varied bioethical issues. LDS Church positions emphasized when appropriate.

Course Outcomes

- Students will understand the ethical and philosophical underpinnings of bioethics and to develop ethical intuitions on bioethical issues.
- Students will learn the terminology, vocabulary, and objectives of bioethics.
- Students will understand the tools and approaches needed to make a bioethical decision and to communicate that decision in rationally informed ways.
- Students will understand the bioethical primary literature, to understand how to read case studies, and familiarity with the major issues being discussed in bioethics today.

BIO 420 : Evolutionary Biology. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PWS 340

RECOMMENDED: Concurrent enrollment in Bio 421.

DESCRIPTION: Intensive examination of evolution as the conceptual cornerstone of biology.

Course Outcomes

- Students will be able to describe the history and development of evolutionary thought.
- Students will be able to list and describe the evidence for evolution and its required corollaries.
- Students will be able to describe the mechanisms by which evolution occurs. Provide detailed explanations of the the processes of evolution by mutation, migration, genetic drift, non-random mating, and natural selection.
- Students will be able to explain adaptation, providing examples from several different fields of biology (e.g., cell biology, physiology, conservation biology, bioinformatics, medicine, behavior, etc.).
- Students will be able to describe the history of life on earth. Identify major evolutionary transitions over time, and explain the tools and evidence that support current hypotheses of the history of life.

BIO 421 : Evolutionary Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240

DESCRIPTION: Hands-on applications and analytical tools of evolutionary biology; emphasizing inference methodology and evidence complementing the theoretical constructs introduced in Bio 520, including comparative anatomy, phylogenetic inference, population genetics, species concepts, and human evolution.

NOTE: Concurrent enrollment with Bio 420 is strongly recommended.

Course Outcomes

- Students will gain a better understanding of the basic principles of evolution within a population including selection, drift, and founder effects by using computer simulations.
- Students will have a deeper understanding of the LDS position on evolution.
- Students will learn the details of phylogenetic reconstruction, tree searching, DNA sequence alignment, and other bioinformatics tools for deciphering patterns of evolution.
- Students will learn the details of species concepts and the criteria used for identifying and diagnosing species.
- Students will gain hands-on experience with hominid fossils and gain an understanding of the evidence that

elucidates the biological history of humans.

BIO 430 : Plant Classification and Identification. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 100 or Bio 130 or PDBio 120 or PWS 100 or instructor's consent.

DESCRIPTION: Principles of plant systematics, taxonomy, and classification, emphasizing family recognition by sight, terminology, and use of identification keys to the temperate flora.

Course Outcomes

- Students will apply correct vocabulary for describing plant parts and be able to deduce the meaning of new terms based on knowledge of common roots, prefixes, and suffixes.
- Students will recognize the major groups of vascular plants, be able to differentiate them by their principal characters, and understand their phylogenetic relationships.
- Students will identify by sight 40 families of flower plants as well as common families of ferns and gymnosperms, by recognizing differentiating features of each family.
- Students will gain proficiency in the use of keys and identification manuals for identifying any unknown plant to species.

BIO 450 : Conservation Biology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 220A & BIO 350; or BIO 220B & BIO 350

DESCRIPTION: Scientific principles of conservation: applying population genetics, and phylogenetic and ecological theory to preservation of biological diversity; developing sustainable ecological systems compatible with human resource use.

Course Outcomes

- Apply an understanding of ecological processes to conservation of populations, species, and ecosystems.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Demonstrate the ability to apply the scientific method and analytical thinking to ecological and conservation issues.
- Demonstrate the ability to synthesize literature relevant to a topic in conservation bioloigy
- Demonstrate the ability to write a scientific term paper

BIO 463 : Genetics of Human Disease. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 340

DESCRIPTION: Examining the application of genetics to understanding and treatment of human disease. Functional consequences of mutations; use of model organisms; linkage and association analysis of complex traits; pharmacogenetics; ethical considerations.

Course Outcomes

- Understand and explain the different types of genetic variants, how they can be typed and how they can be used to understand the genetic architecture of human disease.
- Understand linkage disequilibrium in the human genome and the role it plays in the search for genetic risk factors for human disease
- Understand and use basic statistics and software for analyzing the correlation between genetic markers and risk for disease.
- Understand and explain how model organisms contribute to our understanding of the genetics of human disease.
- Demonstrate the ability to obtain, aggregate and present information about the current knowledge of the genetics of a human disease.

BIO 465 : Bioinformatics and Proteomics. (3:2:1)

WHEN TAUGHT: Winter

PREREQUISITE: BIO 365

DESCRIPTION: 3-D protein structural comparisons, hidden Markov models for database comparisons, homology detection, multiple sequence analyses, and protein family comparisons. Exercises in computer programming in genomics.

Course Outcomes

- Students will learn and demonstrate mastery of advanced analytical bioinformatics techniques, including genome assembly, genome annotation, and protein analyses.
- Demonstrate ability to use and evaluate literature databases and primary literature directed to the bioinformatics community in terms of newly developed software, analytical algorithms, application to empirical data, etc.
- Apply and develop computational skills in secondary (i.e., helices, etc.) and tertiary (i.e., folding, etc.) prediction, and 3-dimensional (i.e., x-ray crystal structures, etc.) modeling of protein structures.
- Apply evolutionary concepts to modeling DNA/proteins to evaluate and/or predict function, utilizing 3D structures, physical and chemical amino acid properties, etc.
- Apply existing and develop new tools for genome assembly and annotation from next-generation DNA sequencing projects

BIO 560 : Population Genetics. (4:4:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Bio 420 or equivalent.

DESCRIPTION: Basic principles of population genetics applied to natural populations; drift, selection, and nonrandom mating; inferring population subdivision, migration, and gene flow.

Course Outcomes

- Students will gain a general introduction to the field a population genetics.
- Students will experience the broad application of population genetics to diverse fields from ecology to medicine.
- Students will manipulate and analyze population genetic data, especially molecular data.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 352 or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.

NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes

- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

MMBIO 221 : General Microbiology. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Any biology course.

RECOMMENDED: Any chemistry course.

DESCRIPTION: Microbial world, emphasizing communicable diseases, their causes and control.

NOTE: Recommended for students seeking a liberal education in microbiology who do not have the prerequisites to take the more advanced courses.

Course Outcomes

- Explain and discuss the ways by which microbiologists study microorganisms.
- Discuss the principle infectious diseases that affect mankind, including how they are transmitted, treated, controlled and prevented.
- Differentiate between the types of microorganisms by identifying relevant structure and their function in the biosphere.
- Propose microbial solutions to global problems.
- Describe how the human body defends itself against infectious agents.

MMBIO 241 : Molecular and Cellular Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBio 240 or concurrent enrollment.

DESCRIPTION: Molecular and cellular biology techniques laboratory.

Course Outcomes

- Practice ethics and integrity by working with groups and following lab rules.*Relates to Program Learning Outcome: A commitment to professional integrity and ethical behavior consistent with themission of the university.
- Learn the basics of experimental design, how to formulate a hypothesis, what controls to use, how to interpret experimental data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Practice scientific communication through written lab questions, exams and oral presentations.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Learn molecular biology laboratory techniques through practical laboratory exercises. Techniques include, spectrophotometry,isolation of DNA and protein, quantification of DNA and protein, techniques used to purify or detect specific proteins, such aschromatography, western blot and ELISA, DNA fingerprinting, polymerase chain reaction and enzyme assays.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology.

MMBIO 261 : Infection and Immunity. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Principles of infectious organisms (principally bacteria and viruses), the diseases they cause, and the role of host immune responses in health and disease.

Course Outcomes

There are no course outcomes available

MMBIO 360 : Microbial Genetics. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBIO 240

DESCRIPTION: How DNA governs complex bacterial functions. Classical and modern approaches to gene discovery, including genetic screens, gene mapping, targeted genetic manipulations, and analyzing gene activity.

Course Outcomes

There are no course outcomes available

MMBIO 363 : Microbial Ecology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 130; or MMBIO 151; or PDBIO 120

DESCRIPTION: Natural history of a microbe; its distribution and abundance. Critical influence of scale and perspective in determining underlying mechanisms.

Course Outcomes
There are no course outcomes available

MMBIO 364 : Bacterial Pathogenesis. (4:3:3)

WHEN TAUGHT: Winter

PREREQUISITE: MMBIO 261

DESCRIPTION: Fundamental principles of bacterial pathogenesis, emphasizing the molecular interactions of medically important bacteria and their hosts.

Course Outcomes
There are no course outcomes available

MMBIO 390R : Readings in Molecular Biology. (1:1:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240

RECOMMENDED: PDBio 360.

DESCRIPTION: Selected readings in molecular biology.

Course Outcomes
- Become familiar with the current literature and techniques in molecular biology
- Gain experience in critically evaluating the current literature in molecular biology.
- Gain confidence in scientific presentations and discussions.

MMBIO 430 : Advanced Cell Biology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PDBIO 360; Bioscience major status.

DESCRIPTION: Molecular genetics, cell biology, and developmental biology.

Course Outcomes
- Read primary literature to further their own understanding of the topic*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Explain the processes of cell biology*Relates to Program Learning Outcome: Knowledge of the principles and techniques of molecular, cell, and evolutionary biology and genetics which prepares the students for further education and/or employment in teaching, basic research, or the health professions.
- Apply knowledge of these molecular processes to broader topics*Relates to Program Learning Outcome: Proficiency in formulating and carrying out independent and collaborative research projects.
- Analyze research data, design experiments and present data in a clear manner*Relates to Program Learning Outcome: Communication skills in presenting their research findings through effective oral and written presentations.

MMBIO 441 : Advanced Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & CHEM 352

DESCRIPTION: Molecular biology of gene structure and expression in prokaryotic and eukaryotic organisms.

Course Outcomes
- Learn molecular biology principles through study, lecture, and class discussion. An emphasis will be on understanding the experiments used to learn these principles.â ¨ *Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology preparing students for further education and/or employment.
- Apply the principles learned to design experiments and properly interpret experimental data.â ¨ *Relates to Program Learning Outcome: Proficiency in formulating research projects
- Present current research from the scientific literature.*Relates to Program Learning Outcomes: Communicate scientific information using oral methods; interpret, analyze and critique experiments from the primary scientific literature. Presenting research findings through effective oral and written presentations.
- Demonstrate integrity and ethical behavior during all class work.â ¨ *Relates to Program Learning Outcome: Commitment to professional integrity and ethical behavior consistent with the mission of the University.

MMBIO 442 : Advanced Molecular Biology Laboratory. (2:0:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 241; MMBio 441 or concurrent enrollment.

DESCRIPTION: Laboratory to accompany MMBio 441.

Course Outcomes
- Learn molecular biology laboratory techniques through hands-on experience. Techniques will include DNA and RNA isolation, PCR, microRNA isolation, northern blotting, RFLP analysis, site-directed mutagenisis, protein extraction and EMSA.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology
- Apply the techniques to design experiments with appropriate hypotheses and controls and properly interpret experimental data*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls
- Practice scientific communication and record-keeping through the completion of a laboratory notebook and answering written and oral questions and presentations.*Relates to Program Learning Outcome: Demonstrate

Communication skills in presenting research findings through effective oral and written presentations.
- Design and carry out independent experiments*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls

MMBIO 461 : Advanced Bacterial Physiology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481 & MMBIO 151

DESCRIPTION: Principles of prokaryotic physiology, including cell structure and function, gene regulation, and biochemical processes; focusing on the unique aspects of prokaryotic biology.

Course Outcomes
- Students will demonstrate an advanced understanding of selected topics in microbial physiology (cell structure, growth, biosynthesis, transport, etc.) through their participation in classroom discussions, writing assignments and oral presentations.
- Students will demonstrate the ability to read, comprehend and communicate current research in microbial physiology by making Powerpoint presentations to the class.
- Students will write a scientific review article on a topic of their choice related to microbial physiology.

MMBIO 463 : Immunology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & MMBIO 261

DESCRIPTION: Advanced concepts of immunological processes.

Course Outcomes
- Understanding advanced concepts of Immunology by studying and reflecting on the subject.*Relates to Program Learning Outcome: Exhibit mastery of four of the principle areas of the discipline
- Understands experimental designs used in immunology research and determine the soundness of the immunological data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Read and understand current publications in Immunology and be able to discuss and critically evaluate experiments and data*Relates to Program Learning Outcome: Devise experiments with appropriate hypotheses and controls.
- Engage in discussions about concepts in immunology and research. Present a PowerPoint on a particular immunological topic. Engage in a question and answer session on the content. Write an easy on a chosen subject relating to recent immunological advances.*Relates to Program Learning Outcome: Communicate scientific information using both oral and written methods.
- Develop a deep appreciation for our Heavenly Father and his love for each of us by engaging in studying how he designed the immune system to protect his children from disease.*Relates to Program Learning Outcome: Reflect/ discuss/ explore how faith in the Lord, and Christ like living are affected by an understanding of the fundamental biological processes.

MMBIO 465 : Virology. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBio 261 or equivalent.

DESCRIPTION: Basic principles of virology, emphasizing selected molecular aspects of virus life cycles and disease processes.

Course Outcomes
- Be able to answer basic questions about Virology: Why are viruses organized as they are? How do viruses replicate? How do viruses cause disease? What are the interactions between viruses and the host immune system? How to prevent/treat/cure viral infections? How can viruses be used as tools to study biological processes and for gene transfer? How can an understanding of viruses help you in your future career? *Relates to Program Learning Outcome: “Exhibit mastery of four of the principal areas of the discipline”, one of which is Virology.
- Understand experimental tools used to study viruses (these are broadly applicable to molecular biology, cell biology, and microbiology) and be able to develop experiments and interpret data.*Relates to Program Learning Outcomes: “Devise experiments with appropriate hypotheses and controls” and “Interpret experiments from primary scientific literature”
- Write about a current, pressing issue in the field of Virology.*Relates to Program Learning Outcome: “Communicate scientific information”
- Understand how research of viruses “by study and also by faith” can lead to alleviation of human disease and suffering.*Relates to Program Learning Outcome: “Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological processes”

MMBIO 466 : Virology Laboratory. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: MMBio 261; or MMBio 465 or concurrent enrollment.

DESCRIPTION: Laboratory exercises illustrating in vitro behavior of selected viruses. Developing laboratory skills for virus studies.

Course Outcomes
- Be able to gain hands-on experience in the ability to characterize various aspects of viral infections based upon cultured eukaryotic cells.
- Be able to titrate virus stocks.
- Be able to determine if a human has been previously exposed to a specific virus by perform serological tests.

MMBIO 467 : Immunology Lab. (1:0:3)

WHEN TAUGHT: Fall

PREREQUISITE: MMBio 261; or 463 or concurrent enrollment.

DESCRIPTION: Laboratory exercises in advanced concepts of immunological processes.

Course Outcomes
- Maintain a research lab book with experimental protocol, data, and discussion of results.

- Understand advanced laboratory concepts of Immunology by completing protocols and experiments
- Understand experimental design used in immunology research and determine the soundness of immunological data according to the design and controls used in the experiment.
- Obtain and interpret experimental data.
- Expand the student's understanding of immunology research and acknowledge the miracle of immunological processes. Develop good social skills through participation in laboratory experiments with other students.

MMBIO 490R : Molecular Biology Seminar. (1:1:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 441; Senior status.

DESCRIPTION: Critical examination of current literature and research in molecular biology.

Course Outcomes

- Describe the current research in the field of molecular biology
- Network and talk to prominent researchers in the field
- Analyze current research and experimental design.

MMBIO 557 : Genes and Cancer. (2:2:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: MMBio 441 or equivalent.

DESCRIPTION: Molecular basis of human cancers, emphasizing oncogenes, tumor suppressor genes, chromosomal instability, hereditary cancers, chemical and physical carcinogens, and viral carcinogenesis.

Course Outcomes

There are no course outcomes available

NDFS 330 : Comparative Animal Nutrition. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Comparative digestion, absorption, and utilization of nutrients and nutritional applications of domestic, pet, and wildlife species.

Course Outcomes

- Demonstrate an understanding of the diverse digestive systems in the animal kingdom.
- Demonstrate an understanding how changes in digestive systems affect both nutrient requirements and affect feeding types and systems.
- Apply the roles of nutrients in cellular metabolism.
- Explain how nutrient deficiencies affect body function and performance.
- Demonstrate knowledge of animal feed formulation.

PDBIO 325 : Tissue Biology (with lab). (3:2:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120 & PDBIO 220

DESCRIPTION: Human anatomy and histology; function of cells in tissue; early stages of embryology.

NOTE: Course should be taken during a student's second or third year and before courses in physiology and developmental biology.

Course Outcomes

- Students will be able to communicate with health professionals effectively regarding tissue/organ anatomy and physiology in instances of health and disease.
- Students will demonstrate how the relationship between cell organization and cell function correlates with normal and pathological organ behavior.
- Students will be able to describe anatomical and physiological characteristics of epithelial, connective, nervous, and muscular tissue.

PDBIO 363 : Advanced Physiology Laboratory. (1:.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBio 362 or concurrent enrollment; or instructor's consent.

DESCRIPTION: Experiments and exercises in advanced physiology emphasizing human physiology. Computer simulations of muscle function, endocrine disease, and human physiology. Emphasizes problem solving and calculations.

Course Outcomes

- Students will demonstrate the skills required to properly interpret data from scientific experimentation to discover how physiological systems function.
- Students will manifest an understanding of basic physiological principles by modeling how human cells, organs, and organ systems function.
- Students will describe how interactions between human organ systems work to maintain homeostasis.

PDBIO 482 : Developmental Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PDBIO 360

RECOMMENDED: PDBio 325.

DESCRIPTION: Invertebrate and vertebrate developmental biology. Embryonic gastrulation, neurulation, pattering, etc. Modern approaches and research strategies. Emphasizes gene function, cell signaling, signal transduction during embryogenesis.

Course Outcomes

- Students will be able to generally describe the early development (from fertilization to axis formation) of one invertebrate and one vertebrate model organism.
- Students will be able to generally describe the concepts of cellular competence, induction, specification, commitment and differentiation in embryonic development.
- Students will be able to give two examples of organogenesis, including genes and signal transduction pathways that lead to organ system formation.
- Students will be able to explain embryonic patterning, using examples that include genes known to act in patterning events.
- Students will be able to explain at least two concepts in developmental biology that overlap with other sciences, such as stem cell research, cancer research, evolutionary sciences, or neuroscience.
- Students will be able to discern and summarize the current state of knowledge on a given topic, construct pioneering research questions on that topic, and propose experiments aimed at answering those questions.

PDBIO 562 : Reproductive Physiology. (0-3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PDBio 362 or equivalent.

RECOMMENDED: Chem 481, PDBio 482; or equivalents.

DESCRIPTION: Mammalian reproductive physiology.

Course Outcomes

- Students will be expected to demonstrate acquisition of both the basic and in-depthknowledge needed to be able to perform the following skills on course assignments, quizzes, and examinations:1. Demonstrate understanding of various reproductive processes at the molecular,biochemical, microscopic, and physiological levels.2. Demonstrate the skills needed to read, analyze, evaluate, comprehend, and synthesizescientific information from several different sources for use in both written and oralcommunication about various reproductive processes.3. Demonstrate an appreciation for the sacred nature of the reproductive processes thatresult in the production of offspring during in-class oral communication.

PDBIO 582 : Developmental Genetics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PDBio 482 or equivalent.

DESCRIPTION: Gene function and regulation during cell specification and differentiation, pattern formation, and organogenesis in developing embryo.

Course Outcomes

- Students will demonstrate understanding of, and the ability to think critically about, primary developmental biology research articles.
- Students will demonstrate confidence in contributing to scientific discussions.
- Students will demonstrate the ability to think scientifically by formulating a research proposal.

PWS 100 : Living with Plants. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Introduction to principles of plant function and diversity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

- Demonstrate a fundamental knowledge of basic principles and concepts of plant biology (i.e., structure, function, and diversity)
- Cultivate an appreciation for the central importance of plants in the way our world and human society functions
- Provide a conceptual framework of how plants influence the environment
- Practice using the scientific method to better understand plant-environment interactions
- Improve verbal and written communication

PWS 199R : Academic Internship. (.5-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Consent of both department chair and internship coordinator.

DESCRIPTION: Work experience evaluated by supervisor and posted on student's transcript.

Course Outcomes

- Students will find an entry level internship position with a high quality company and receive above average ratings from the employer.

PWS 282 : Introduction to Soil Science. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 283 or concurrent enrollment.

DESCRIPTION: Physical, chemical and microbiological properties of soils that affect plant growth in natural, agricultural, and urban environments.

Course Outcomes

- Enhance critically thinking skills as they apply to soil resource management and conservation
- Demonstrate a fundamental knowledge of soil chemistry, genesis, microbiology, physics, taxonomy, and nutrient and water relations
- Create a conceptual framework to help manage soil resources (i.e., animal habitat, plant nutrient fertility, salinity, soil and water quality, and wind and water erosion) in agricultural, urban, and ecological settings
- Understand the historical and current problems, and cultural concerns facing soils as a natural resource essential to human life

PWS 283 : Introduction to Soil Science Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 282 or concurrent enrollment.

DESCRIPTION: Laboratory techniques in determining soil physical, chemical, and fertility properties.

Course Outcomes

- Understand basic soil assessments related to soil chemistry, physics, biology, and nutrient fertility
- Apply laboratory techniques to determine problems associated with soil resource conservation and management
- Conduct basic soil methods in nutrient analysis; textural classification; and organic matter, cation exchange capacity, acidity, and alkalinity content

PWS 301 : Plant Growth and Reproduction. (3:2:2)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 100 or equivalent.

DESCRIPTION: Scientific principles of plant propagation by seeds, cuttings, budding and grafting, and tissue culture.

Course Outcomes

- Students will take a pre- and post-test for foundational principles related to this course and will show learning by an increase of at least double the average score.
- Students will complete a class project that involves the use of foundation principles in this course and use this written project for their portfolio.

PWS 305 : Soils and Water Quality. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 282 & CHEM 105; or PWS 282 & CHEM 101; PWS 100 or equivalent; Math 110 or equivalent.

DESCRIPTION: Principles and practices of safe management of agricultural and urban wastes; amendments and nutrients including remediation methods for conservation of soils and water quality.

Course Outcomes

- Evaluate case studies in current topics soil and water quality
- Demonstrate a fundamental knowledge in water quality and water resource conservation as influenced by soil-water-atmosphere interactions
- Enhance critically thinking skills as it relates to issues in water quality management and resource conservation
- Improve mathematical and statistical skills related to nutrient, salinity, sodicity, and toxicity evaluation and management

PWS 306 : Soil Fertility and Plant Nutrition Laboratory. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 305 or concurrent enrollment.

DESCRIPTION: Laboratory for studying nutrient-supplying power of soils, nutrient deficiencies and toxicities, and plant adaptation to nutritional stresses.

Course Outcomes

- Gain a fundamental understanding of the investigative techniques necessary to solve problems associated with water and soil resources and management
- Understand the basic diagnostic steps to test water and soil quality
- Improve mathematical and statistical skills related to nutrient, salinity, sodicity, and toxicity evaluation and management

PWS 331 : Science of Plant Pest Control. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Management of plant health problems, namely weed, insect, and disease, through integrated pest management and proper pesticide management and safety.

Course Outcomes

- Enhance critical thinking skills.
- Develop a framework for decision-making and implementation in applied pest management and ecology.
- Recommend control options for plant pest management.
- Safely and accurately apply plant pesticides in urban and agricultural environments.
- Identify various plant pest control measures.
- Improve communication and interpersonal skills.

PWS 431 : Plant Health Diagnostics. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Diagnosing plant health problems; pest biology and identification (weed, insect, and disease).

Course Outcomes

There are no course outcomes available

PWS 494R : Mentored Learning Experience. (1-6:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Topics vary.

NOTE: Registration required for mentored experiences.

Course Outcomes

- Design and/or participate in basic experiments attempting to answer questions in biochemistry, biotechnology,

genetics, molecular biology, and soil science
- Generate and analyze experimental results for publications or presentations at professional meetings
- Learn how to be an effective and efficient mentor

PWS 514 : Soil Microbiology. (2:2:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: Chem 105 and 106; or equivalents.

DESCRIPTION: Ecology and role of soil microorganisms in biogeochemical cycles, decomposition of organic matter and waste materials, and bioremediation of contaminated soils and water.

Course Outcomes
- Ecology and role of soil microorganisms in nutrient cycling, decomposition of organic matter and waste materials, and degradation of agricultural chemicals in soils

PWS 559 : Molecular Plant Breeding. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: PWS 265, 340, 485, 586, PDBio 360; or equivalents; PWS 494R or concurrent enrollment.

DESCRIPTION: Molecular genetics methods applied to improvement of economically important plants. Theory and methods of plant transformations.

Course Outcomes
- Outline the history and uses of genetic molecular markers
- Discuss with proficiency the pros and cons of a minimum of seven different marker systems. Examples of these systems include RFLPs, RAPDs, AFLPs, SSRs, and SNPs
- Lead classroom discussions using current scientific literature as the basis for the discussion
- Prepare a manuscript for submission to a refereed scientific journal
- Explain scientific ethics, etiquette, and the underpinnings as to why it is important to publish scientific journals
- Discuss the differences between academic and industry-based science

PWS 575 : Plant Pathology. (3:2:3)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: PWS 100 or equivalent.

DESCRIPTION: Concepts associated with symptoms, development, control, and classification of plant diseases. Identification and classification of plant fungi, bacteria, and viruses.

Course Outcomes
- Diagnose and treat plant problems
- Identify major diseases that affect plants
- Culture and identify fungi and bacteria
- Employ problem solving skills, including enhanced ability to critically think and reason
- Display enhanced communication and interpersonal skills, including writing

PWS 586 : Plant Cell Biology. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: PDBio 360, PWS 340, 440; or equivalents.

DESCRIPTION: Molecular aspects of the structural and functional characteristics of plant cells, emphasizing characteristics of plant cells setting them apart from animal cells.

Course Outcomes
- Explain unique aspects of plant cell structure and function
- Read and explicate published research in plant cell biology
- Write coherently on topics related to plant cell biology
- Deliver an oral presentation of a topic related to plant cell biology

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes
- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

Recommended Courses

For preprofessional students in tracks A, B, or C above:

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.

DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

Course Outcomes

- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.
- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

BUS M 201 : Financial Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Acc 200 or equivalent.

DESCRIPTION: Financial statement analysis, financial planning, sources of financing, working capital management, risk and return, and valuation.

Course Outcomes

- Use fundamental analysis to conduct a firm performance evaluation.
- Construct a financial forecast for a term.
- Employ time value of money to solve common financial problems.
- Make corporate investment decisions using capital budgeting.
- Be able to value firms, bonds, and stocks.
- Understand how entrepreneurial and corporate finance differ.

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: High school algebra and trigonometry.

RECOMMENDED: Concurrent enrollment in Phscs 107.

DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes

There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 105 or equivalent.

RECOMMENDED: Concurrent enrollment in Phscs 108.

DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes

There are no course outcomes available

PHSCS 107 : General Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Phscs 105 or concurrent enrollment.

DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

Course Outcomes

- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 106 or concurrent enrollment

DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

Course Outcomes

- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

For graduate school preparation in biotechnology:

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: High school algebra and trigonometry.
RECOMMENDED: Concurrent enrollment in Phscs 107.
DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes
There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 105 or equivalent.
RECOMMENDED: Concurrent enrollment in Phscs 108.
DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes
There are no course outcomes available

PHSCS 107 : General Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Phscs 105 or concurrent enrollment.
DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 106 or concurrent enrollment
DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

For students seeking employment in the biotech industry:

PWS 199R : Academic Internship. (.5-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Consent of both department chair and internship coordinator.
DESCRIPTION: Work experience evaluated by supervisor and posted on student's transcript.

Course Outcomes
- Students will find an entry level internship position with a high quality company and receive above average ratings from the employer.

GE courses for bio-business students seeking a Marriott School of Management minor:

ECON 110 : Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
There are no course outcomes available

: Honors Economic Principles and Problems.

Course Outcomes

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

*Hours include courses that may fulfill university core requirements.

Program Requirements | View MAP | View Program Outcomes

1. Complete the following required courses:

BIO 235 : Field Botany. (3:3:6)

WHEN TAUGHT: Fall; Spring

DESCRIPTION: Recognition, characteristics, and uses of common trees and shrubs.

Course Outcomes

- Students will demonstrate a fundamental knowledge of biology
- Students will develop the discovery skills and tools used by biologists
- Students will use biological knowledge to enhance their personal lives
- Students will use their skills and knowledge in biology to secure employment or to advance in higher education in biology-related disciplines

PWS 100 : Living with Plants. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Introduction to principles of plant function and diversity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

- Demonstrate a fundamental knowledge of basic principles and concepts of plant biology (i.e., structure, function, and diversity)
- Cultivate an appreciation for the central importance of plants in the way our world and human society functions
- Provide a conceptual framework of how plants influence the environment
- Practice using the scientific method to better understand plant-environment interactions
- Improve verbal and written communication

PWS 103 : Residential Landscape Design. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Design and composition as applied to development of residential grounds.

Course Outcomes

- Design residential landscapes that are both funtional and beautiful
- Make better decisions when purchasing plants and landscape construction materials
- Discuss issues and challenges dealing with landscape planning and maintenance.
- Enjoy nature more
- Explain professional opportunities related to landscape design.

PWS 105 : Landscape Design Graphics. (2:2:0)

WHEN TAUGHT: Winter; Spring

PREREQUISITE: PWS 103

DESCRIPTION: Communication through descriptive drawing and professional plan graphics: plan views, elevation, color, and computer-aided design.

Course Outcomes

- Feel comfortable and confident with the different methods of drawing as they relate to landscape design
- Have a clear and developed drawing style
- Be able to produce drawings using graphics that clearly communicate and portray the design intent.
- Develop drawing techniques that allow for quick design and those that allow for more professional design.

PWS 191 : Introduction to Landscape Management. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: Introduction to the landscape management competency matrix and portfolio. Overview of professional opportunities presented by faculty and industry professionals.

Course Outcomes
- Understand the opportunities for learning and growth that are available in the landscape contracting profession
- identify and evaluate professional areas in which to pursue excellence
- Maximize your potential for professional success

PWS 198R : BYU Grounds Practicum. (.5:0:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Instructor's consent; concurrent employment with BYU Grounds Department.

DESCRIPTION: Multiple horticulture experiences through collaboration with BYU Grounds.

Course Outcomes
- To provide a practical outside of the classroom experience for students
- To introduce students to a diverse range of practical skills and on the job training.
- To expose students to the different aspects of the Green Industry through on campus grounds experience.
- To strengthen the relationship between the Landscape Management Program and the Grounds department on campus.
- To make campus part of the learning laboratory.

PWS 199R : Academic Internship. (.5-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Consent of both department chair and internship coordinator.

DESCRIPTION: Work experience evaluated by supervisor and posted on student's transcript.

Course Outcomes
- Students will find an entry level internship position with a high quality company and receive above average ratings from the employer.

(0.5 hour required)

PWS 211 : Landscape Structures. (2:2:0)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 103

DESCRIPTION: Theory and mechanics of hardscape design and construction.

Course Outcomes
- To apply basic knowledge of common hardscape, irrigation, and similar materials learned in the landscape structures course.
- To be able to implement (construct) certain elements of landscape construction.
- To know how to think creatively and conceptually of a landscape design and be able to translate that into a construction document.

PWS 212 : Landscape Laboratory. (1:0:2)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 211 or concurrent enrollment.

DESCRIPTION: Working methods of the landscape industry: irrigation, equipment, and materials.

Course Outcomes
- To apply basic knowledge of common hardscape, irrigation, and similar materials learned in the landscape structures course.
- To be able to implement (construct) certain elements of landscape construction.
- To know how to think creatively and conceptually of a landscape design and be able to translate that into a construction document.

PWS 214 : Landscape Bidding and Estimating. (2:2:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 103; Math 110 or equivalent.

DESCRIPTION: Competitive bidding strategies, quantity takeoffs, bid analyses for landscape construction and maintenance.

Course Outcomes
- Understand the different players in the landscape industry and how they interact with each other.
- Discuss and understand basic construction law and landscape construction and maintenance contracts.
- Create and accurately figure estimates for both landscape construction and landscape maintenance projects.
- Understand cost accounting and cash flow accounting for business.
- Be able to use a planimeter and other measuring instruments for estimating purposes.

PWS 282 : Introduction to Soil Science. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 283 or concurrent enrollment.

DESCRIPTION: Physical, chemical and microbiological properties of soils that affect plant growth in natural, agricultural, and urban environments.

Course Outcomes
- Enhance critically thinking skills as they apply to soil resource management and conservation
- Demonstrate a fundamental knowledge of soil chemistry, genesis, microbiology, physics, taxonomy, and

nutrient and water relations
- Create a conceptual framework to help manage soil resources (i.e., animal habitat, plant nutrient fertility, salinity, soil and water quality, and wind and water erosion) in agricultural, urban, and ecological settings
- Understand the historical and current problems, and cultural concerns facing soils as a natural resource essential to human life

PWS 283 : Introduction to Soil Science Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 282 or concurrent enrollment.

DESCRIPTION: Laboratory techniques in determining soil physical, chemical, and fertility properties.

Course Outcomes
- Understand basic soil assessments related to soil chemistry, physics, biology, and nutrient fertility
- Apply laboratory techniques to determine problems associated with soil resource conservation and management
- Conduct basic soil methods in nutrient analysis; textural classification; and organic matter, cation exchange capacity, acidity, and alkalinity content

PWS 301 : Plant Growth and Reproduction. (3:2:2)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 100 or equivalent.

DESCRIPTION: Scientific principles of plant propagation by seeds, cuttings, budding and grafting, and tissue culture.

Course Outcomes
- Students will take a pre- and post-test for foundational principles related to this course and will show learning by an increase of at least double the average score.
- Students will complete a class project that involves the use of foundation principles in this course and use this written project for their portfolio.

PWS 319 : Turf Science. (3:2:2)

WHEN TAUGHT: Fall

DESCRIPTION: Design, installation, and management of agricultural and urban turfgrass systems. Physiological and soil interaction principles of turfgrass management.

Course Outcomes
- Students will become compentant enough to pass a mock up of the Turfgrass Certification exam patterned after the industry standard.
- Students will be given a pre- and post-class attitude survey to access their understanding and appreciation of the importance of turfgrass in terms of aesthetics, environmental quality, and athlete/child safety with a goal of the score doubling (on average) at the end of semester.
- Students will conduct a research project to the point of having a written manuscript that is in draft form in order to show them the possibility of doing a graduate program. Also, students will write a short paper on how turfgrass science is important in their anticipated field of choice.

PWS 320 : Arboriculture. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 100 & PWS 282

RECOMMENDED: Bio 235.

DESCRIPTION: Biology and culture of woody plants for use in urban landscapes.

Course Outcomes
- Understand fundamental concepts dealing with the ecology, biology and culture of woody landscape plants
- become deeply interested in trees

PWS 331 : Science of Plant Pest Control. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Management of plant health problems, namely weed, insect, and disease, through integrated pest management and proper pesticide management and safety.

Course Outcomes
- Enhance critical thinking skills.
- Develop a framework for decision-making and implementation in applied pest management and ecology.
- Recommend control options for plant pest management.
- Safely and accurately apply plant pesticides in urban and agricultural environments.
- Identify various plant pest control measures.
- Improve communication and interpersonal skills.

PWS 391 : Careers in Landscape Management. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: Current information on internships, career options, and employment preparation skills in the landscape management/green industry.

Course Outcomes

There are no course outcomes available

(1 hour required)

PWS 402 : Urban Soils and Water. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 100 & PWS 282.

DESCRIPTION: Principles of water management, soil physics, and soil fertility used in a problem-solving environment addressing current challenges in managing soils and water in the urban landscape.

Course Outcomes

- Students will apply concepts assimilated in previous courses to solve problems associated with at least five real world case studies. By assignment, eachwill develop an assessment matrix for use in problem solving situations encountered in their future careers.
- A primary goal of this course is for students to greatly increase their knowledge base of scientific principles related to plant, water, soil, nutrient, and pest management. This will be assessed by examination at beginning and end of semester with a target of at least doubling of average scores.
- Students will successfully writeseveral documents, including a research paper and diagnostic key at an upperclassmen level of writing. Students will actively participate in team problem solving and a Group presentation.
- Students will develop at least one individual and group item to add to their portfolio. Development of a diagnostic key, writing an evaluation paper, development of a group presentation and completion of a semester project could each contribute to portfolios.

PWS 431 : Plant Health Diagnostics. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Diagnosing plant health problems; pest biology and identification (weed, insect, and disease).

Course Outcomes

There are no course outcomes available

PWS 481 : Case Studies, Landscape Management Systems. (2:2:0)

WHEN TAUGHT: Fall

DESCRIPTION: Understanding and demonstrating competency with business systems used in landscape contracting companies.

Course Outcomes

There are no course outcomes available

2. Complete the following required non-departmental courses:

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.

DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

Course Outcomes

- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.
- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

BUS M 201 : Financial Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Acc 200 or equivalent.

DESCRIPTION: Financial statement analysis, financial planning, sources of financing, working capital management, risk and return, and valuation.

Course Outcomes

- Use fundamental analysis to conduct a firm performance evaluation.
- Construct a financial forecast for a term.
- Employ time value of money to solve common financial problems.
- Make corporate investment decisions using capital budgeting.
- Be able to value firms, bonds, and stocks.
- Understand how entrepreneurial and corporate finance differ.

BUS M 488 : Agribusiness Management 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: ACC 200 & BUS M 201 & ECON 110; or ACC 200 & FIN 201 & ECON 110
DESCRIPTION: Concepts, tools, and approaches to understanding competitive forces and the development of sustainable competitive advantage for firms in the food, fiber, and horticulture industries.

Course Outcomes
- Understand the concepts and models of strategic management presented in the course.
- Appreciate the roles, responsibilities, and potential influence of business leaders.
- Further develop the personal sense of ethics and integrity that guide decision making in business, community, church, and family relationships.
- Analyze the competitive situation facing a firm using the models of strategic management presented in class.
- Apply the models of strategic management presented in the course to arrive at recommendations that will help organizations achieve and sustain competitive advantage.
- Persuasively communicate analytical conclusions and recommendations in verbal and written form.
- Effectively participate in group work.

BUS M 489 : Agribusiness Management 2. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: ACC 200 & BUS M 201 & ECON 110; or ACC 200 & FIN 201 & ECON 110
DESCRIPTION: Developing and implementing marketing plans and programs for companies participating in the value chain of agribusiness industries.

Course Outcomes
- Students will understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers in life sciences industries.
- Describe how life sciences firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Students will understand the basics of the market research process.
- Students will study current marketing techniques in life sciences-based industries.
- Students will learn to apply faith-based, moral reasoning and personal integrity in professional life.
- Students will learn to work effectively within a team and to communicate effectively in business environments.

ECON 110 : Economic Principles and Problems. (3:3:0)
OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
There are no course outcomes available

: Honors Economic Principles and Problems.

Course Outcomes

IS 100 : Computer Spreadsheet Skills. (.5:0:1)
WHEN TAUGHT: Spring; Summer
DESCRIPTION: Basic computer skills, focusing on spreadsheet and database programs. No technical background necessary.

Course Outcomes
- Students will be able to construct an Excel Spreadsheet with appropriate formulas, functions, labels, charts, media inserts, hyperlinks, and data base functions – and output the report.

And complete one course from the following:

CHEM 101 : Introductory General Chemistry. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 97 or equivalent.
DESCRIPTION: Atomic and molecular structure, periodic relationships, states of matter, chemical reactions and stoichiometry, acids and bases.
NOTE: Primarily for nonscience majors who require a broad introduction to general chemistry.

Course Outcomes
- Students will be able to view the world around them in chemical terms. Students will use the concepts of atoms, molecules, and their properties to understand a variety of phenomena.
- Students will be able to make qualitative and/or quantitative predictions regarding a number of chemical concepts including chemical reactions and stoichiometry, calorimetry, osmosis, gases, acid/base chemistry, chemical equilibria, and radioactivity.

CHEM 105 : General College Chemistry. (4:5:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.
DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes
- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

3. Complete two courses from the following:

BIO 430 : Plant Classification and Identification. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 100 or Bio 130 or PDBio 120 or PWS 100 or instructor's consent.

DESCRIPTION: Principles of plant systematics, taxonomy, and classification, emphasizing family recognition by sight, terminology, and use of identification keys to the temperate flora.

Course Outcomes
- Students will apply correct vocabulary for describing plant parts and be able to deduce the meaning of new terms based on knowledge of common roots, prefixes, and suffixes.
- Students will recognize the major groups of vascular plants, be able to differentiate them by their principal characters, and understand their phylogenetic relationships.
- Students will identify by sight 40 families of flower plants as well as common families of ferns and gymnosperms, by recognizing differentiating features of each family.
- Students will gain proficiency in the use of keys and identification manuals for identifying any unknown plant to species.

PWS 112 : Floral Design. (3:2:2)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: History and principles of floral design; identification, care, and handling of cut flowers; techniques of arranging flowers and other plant materials for home and professional use.

NOTE: Fee. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
- Students will take a pre- and post-test for foundational principles related to floral design and will show learning by an increase of at least double the average score.
- Students will learn how to build various floral arrangements and will successfully complete one design per week.

PWS 210 : Herbaceous Plants. (2:2:0)

WHEN TAUGHT: Fall

DESCRIPTION: Identification and landscape use of flowers and groundcovers.

Course Outcomes
- Students will take a pre- and post-test for foundational principles related to growth of herbaceous plants and will show learning by an increase of at least double the average score.
- Students will complete a class project that involves the use of foundation principles in this course and use this written project for their portfolio.

PWS 213 : Interior Plants and Landscapes. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Identification and culture of plants used in the interior landscape industry; applying principles of design to the placement and use in interior landscapes.

Course Outcomes
- Students will take a pre- and post-test for foundational principles related to this course and will show learning by an increase of at least double the average score.
- Students will complete a class project that involves the use of foundation principles in this course and use this written project for their portfolio.

PWS 330 : Rangeland Plant Identification and Ecology. (3:2:3)

WHEN TAUGHT: Winter

DESCRIPTION: Identification, characteristics, phenology, distribution, site adaptation, forage value, and response to management of significant range and pasture plants.

Course Outcomes
- Students will be able to sight identify many common range plants of North America
- Students will be able to use a grass key to identify unknown grasses
- Students will be able to pair symptoms of sick animals with poisonous plants that may have been consumed

PWS 380 : Plant Community Design. (2:2:0)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 103 & PWS 105 & BIO 235

DESCRIPTION: Design and ecology of thematic plant communities.

Course Outcomes

- Design a variety of landscapes and gardens with different contextual variables.
- Select plants, appropriate for a given design, based on correct horticultural and ecological knowledge (plant justification)
- Design better, design faster
- Further develop critiquing skills
- Prepare a landscape design portfolio for client interviews or graduate school applications.

Recommended Courses

A management minor is *strongly* recommended.

Completion of the following courses (some listed above) will meet the requirements for this minor:

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.

DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

Course Outcomes

- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.
- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

BUS M 201 : Financial Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Acc 200 or equivalent.

DESCRIPTION: Financial statement analysis, financial planning, sources of financing, working capital management, risk and return, and valuation.

Course Outcomes

- Use fundamental analysis to conduct a firm performance evaluation.
- Construct a financial forecast for a term.
- Employ time value of money to solve common financial problems.
- Make corporate investment decisions using capital budgeting.
- Be able to value firms, bonds, and stocks.
- Understand how entrepreneurial and corporate finance differ.

BUS M 371R : Entrepreneurship Lecture Series. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Lectures by successful entrepreneurs on subjects significant to entrepreneur-type opportunities.

Course Outcomes

- Recognize and resolve ethical challenges and choices in specific organizational contexts.
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life

BUS M 489 : Agribusiness Management 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: ACC 200 & BUS M 201 & ECON 110; or ACC 200 & FIN 201 & ECON 110

DESCRIPTION: Developing and implementing marketing plans and programs for companies participating in the value chain of agribusiness industries.

Course Outcomes

- Students will understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers in life sciences industries.
- Describe how life sciences firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Students will understand the basics of the market research process.
- Students will study current marketing techniques in life sciences-based industries.
- Students will learn to apply faith-based, moral reasoning and personal integrity in professional life.

- Students will learn to work effectively within a team and to communicate effectively in business environments.

ECON 110 : Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

There are no course outcomes available

: Honors Economic Principles and Problems.

Course Outcomes

MATH 110 : College Algebra. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 97 or equivalent (see Independent Study).

DESCRIPTION: Functions, polynomials, theory of equations, exponential and logarithmic functions, matrices, determinants, systems of linear equations, permutations, combinations, binomial theorem.

Course Outcomes

- Graph functions using horizontal and vertical shiftsGraph functions using compressions and stretchesGraph functions using reflections about the x-axis or y-axisForm composite functions and find the domainDetermine the inverse of a function and graph an inverse function from the graph of a function
- This course prepares students to take courses in calculus, statistics, mathematics for elementary education majors, and other areas where algebra skills are required. Fluent skills in algebra are necessary for success in any area that uses mathematical analysis. The mastery of college algebra requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. College Algebra develops the concepts of graphing functions, polynomial and rational functions, exponential and logarithmic functions, conic sections, solving systems of equations, the binomial theorem, permutations, combinations, and probability. This course contributes to all the expected learning outcomes of the Mathematics BS degree. For more detailed information, visit the Math 110 Wiki page.
- Quadratic functionsPolynomial functionsRational functionsPolynomial and rational inequalitiesThe real zeros of a polynomial functionComplex zeros and the Fundamental Theorem of Algebra
- Exponential functionsLogarithmic functionsProperties of LogarithmsLogarithmic and exponential equationsCompound interestExponential growth and decay
- Graph parabolas, ellipses, and hyperbolasFind the equation of parabolas, ellipses, and hyperbolasDiscuss the equation of conic sections to find vertices, foci, asymptotes, and the directrixWork with conic sections that are not centered at the origin
- Solve systems of linear equations using substitution and eliminationSolve systems of non-linear equations using substitution and eliminationDecompose rational functions using partial fractions
- Find terms in a sequence using a formula and a recursive definitionFind a formula for terms in an arithmetic sequence and be able to add the terms of a finite arithmetic sequenceFind a formula for the terms in a geometric sequence and be able to find the sum of finite and infinite geometric seriesProve statements using mathematical induction
- Work with operations on sets such as union, intersection and complement and count the number of elements in a setCompute permutations and combinationsEvaluate binomial coefficients and expand binomials using the Binomial TheoremCompute probabilities of equally likely outcomes

ORG B 320 : Organizational Effectiveness. (3:Arr:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Theories and concepts for creating effective organizations, e.g., individual, group, and organizational processes and human resource functions, including selection, compensation, and performance management.

NOTE: Taught online.

Course Outcomes

There are no course outcomes available

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation

- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

The following courses are also suggested:

BUS M 372 : Basic Entrepreneurship Skills. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Practical aspects of business formation and growth; key skills and principles needed to successfully start up and grow a business.

NOTE: For non-Marriott School of Management students.

Course Outcomes
- Participate effectively on an entrepreneurial founding team and help create a start-up business.
- Formulate strategies to overcome common start-up business challenges.
- Write self-reflective papers on a variety of business topics, articles, and books in order to help them discover their entrepreneurial spirit.
- Understand and apply entrepreneurial terminology, global enterprise issues, and ethical decision-making to business cases.

TMA 150 : Public Speaking. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Principles and methods of public speaking; speaking experiences.

Course Outcomes
- Develop analytical listening and observation skills.
- Know how to speak publicly so your audience will really listen and understand.
- Construct and deliver effective extemporaneous public speeches.
- Manage speech anxiety and effective use nonverbal communication to inform, persuade, enlighten, and impact your audience.
- Be able to produce and employ effective visual aids in your presentations.

For students planning to pursue a master's degree in landscape architecture (MLA), the following courses are also recommended:

BIO 350 : Ecology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Distribution and abundance of organisms and their interactions with the physical and biotic components of the earth.

Course Outcomes
- Understand the major physical processes that form and characterize the biosphere, including global scale energy flow, the carbon cycle, climate, and soil formation.
- Understand the processes that drive major levels of organization of the biotic world, including energetics in the ecosystem, population dynamics, and species interactions.
- Understand the importance of writing as a way of synthesizing and solidifying critical thought.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Understand the importance of ecology to issues regarding human well-being
- See the connectivity and relevance of ecology to other fields of study

CM 105 : Introduction to Construction Management. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Introduction to Construction Management including BIM, estimating, scheduling, and construction calculation methods.

NOTE: Fee.

Course Outcomes
- Know basic construction math.
- Understand, navigate and apply commercial building codes.
- Understand the scope of Construction and Facilities and Property Management majors.
- Model a commercial project using Building Information Modeling.
- Read and understand construction documents (plans and specs).
- The assessments for the above course outcomes are performed through insturctor analysis of homework, exams, classroom observations, student feedback, and course evaluations.

GEOG 212 : Introduction to Geographic Information Systems. (3:2:1)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Concepts in the use of small- and large-scale digital map data, emphasizing landscape interpretation and feature description.

Course Outcomes
- Understand basic spatial concepts and data models that form the foundation of GIS.
- Acquire geospatial data from common sources and manipuate them for a specific application.

- Analyze data using GIS to solve real world problems.
- Describe several applications in which GIS is used to solve geographic problems.
- Design and use maps to explore and communicate geospatial information.

PWS 380 : Plant Community Design. (2:2:0)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 103 & PWS 105 & BIO 235

DESCRIPTION: Design and ecology of thematic plant communities.

Course Outcomes

- Design a variety of landscapes and gardens with different contextual variables.
- Select plants, appropriate for a given design, based on correct horticultural and ecological knowledge (plant justification)
- Design better, design faster
- Further develop critiquing skills
- Prepare a landscape design portfolio for client interviews or graduate school applications.

For students planning to pursue a master's degree in horticulture science (MS), the following courses are recommended:

BIO 350 : Ecology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Distribution and abundance of organisms and their interactions with the physical and biotic components of the earth.

Course Outcomes

- Understand the major physical processes that form and characterize the biosphere, including global scale energy flow, the carbon cycle, climate, and soil formation.
- Understand the processes that drive major levels of organization of the biotic world, including energetics in the ecosystem, population dynamics, and species interactions.
- Understand the importance of writing as a way of synthesizing and solidifying critical thought.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Understand the importance of ecology to issues regarding human well-being
- See the connectivity and relevance of ecology to other fields of study

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

Course Outcomes

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

Course Outcomes

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes

- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers,

meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

Course Outcomes

- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes

- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

MATH 119 : Introduction to Calculus. (4:4:1)

OFFERED: Independent Study only.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 and Math 111; or equivalent.

DESCRIPTION: Introduction to plane analytic geometry and calculus.

Course Outcomes

- This course is designed to provide beginning undergraduate students a first exposure to Calculus concepts, theorems, and techniques. In general, theorems will not be proved. An understanding of the theorems and their applications to solve calculus problems will be taught. Students will be expected to develop effective problem solving skills based on their understanding of the theory and not just memorize a set of routines to solve problems. For a more detailed course description, visit the Math 119 Wiki page.

Or

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: High school algebra and trigonometry.

RECOMMENDED: Concurrent enrollment in Phscs 107.

DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes

There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Phscs 105 or equivalent.

RECOMMENDED: Concurrent enrollment in Phscs 108.

DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes

There are no course outcomes available

PWS 305 : Soils and Water Quality. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 282 & CHEM 105; or PWS 282 & CHEM 101; PWS 100 or equivalent; Math 110 or equivalent.

DESCRIPTION: Principles and practices of safe management of agricultural and urban wastes; amendments and nutrients including remediation methods for conservation of soils and water quality.

Course Outcomes

- Evaluate case studies in current topics soil and water quality
- Demonstrate a fundamental knowledge in water quality and water resource conservation as influenced by soil-water-atmosphere interactions
- Enhance critically thinking skills as it relates to issues in water quality management and resource conservation
- Improve mathematical and statistical skills related to nutrient, salinity, sodicity, and toxicity evaluation and management

PWS 369 : Science of Plant Production. (4:4:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: PWS 100, 282; or equivalents.

DESCRIPTION: Scientific principles of crop production related to agronomic and horticultural plants, including relationship of management principles and physiological processes in plants.

Course Outcomes

No outcomes are available at this time.

PWS 390R : Special Topics in Plant and Wildlife Sciences. (1-3:Arr.:Arr.)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Current topics in plant and wildlife sciences.

Course Outcomes

- Students will gain knowledge from specialized instruction in focused area

PWS 440 : Plant Physiology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: GE Biological Science requirement; college chemistry

RECOMMENDED: Chem 285; or 351, 352.

DESCRIPTION: Photosynthesis, respiration, water relations, mineral nutrition, growth of flowering plants.

Course Outcomes

- Students will be fluent in understanding plant function at the molecular, biochemical and whole plant levels
- Students will understand the connections between plant function and ecosystem processes
- Student will practice applying the scientific method in order to develop critical thinking and problem solving skills
- Student will engage in learning activities that increase there writing and speaking proficiency

PWS 494R : Mentored Learning Experience. (1-6:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Topics vary.

NOTE: Registration required for mentored experiences.

Course Outcomes

- Design and/or participate in basic experiments attempting to answer questions in biochemistry, biotechnology, genetics, molecular biology, and soil science
- Generate and analyze experimental results for publications or presentations at professional meetings
- Learn how to be an effective and efficient mentor

: Biotechnology Laboratory.

Course Outcomes

: Plant Physiology Laboratory.

Course Outcomes

: Environmental Science Laboratory.

Course Outcomes

: Soil, Plant, and Water Science Laboratory.

Course Outcomes

: Environmental Science Field Techniques.

Course Outcomes

: Plant and Soil Science Field Techniques.

Course Outcomes

: Plant Breeding Field Techniques.

Course Outcomes

: Plant Tissue Culture and Transformation Techniques.

Course Outcomes

: Plant Cytogenetics Laboratory.

Course Outcomes

: Animal Cytogenetics Laboratory.

Course Outcomes

: Plant Cell Biology Laboratory.

Course Outcomes

: Analytical Techniques in Plant Biology.

Course Outcomes

: Environmental Science Computation Laboratory.

Course Outcomes

: Molecular Genetics and Gene Mapping Laboratory.

Course Outcomes

: Plant and Animal Genomics Laboratory.

Course Outcomes

: Analytical Techniques in Soil Science.

Course Outcomes

: Animal Genetics and Breeding Techniques.

Course Outcomes

: Soil Physical Properties Laboratory.

Course Outcomes

: Soil and Water Chemistry Laboratory.

Course Outcomes

: Animal Reproductive Research Laboratory.

Course Outcomes

: Field Techniques in Environmental Soil Research.

Course Outcomes

: Soil Microbiology Laboratory.

Course Outcomes

: Plant ID / URME Team.

Course Outcomes

PWS 511 : Environmental Biophysics: Soil and Plant Water Relations. (4:3:2)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Phscs 105 and PWS 282; or equivalents.

DESCRIPTION: Integrating biological, physical, and chemical processes of water and solute movements through the soil-plant-atmosphere continuum.

Course Outcomes

- Students will take a pre- and post-semester exam and at least double their score to assess understanding of

the importance of physics in biological systems.

*Hours include courses that may fulfill university core requirements.

BS in Wildlife and Wildlands Conservation (65 hours*)

Show All Course Descriptions
Hide All Course Descriptions

The Discipline

This degree program qualifies students for federal job series employment in wildlife biology, range conservation, fisheries, ecology, biology, zoology, and botany. It also prepares for graduate programs in renewable natural resources and for eventual professional affiliations with state wildlife agencies and a number of federal agencies, including the U.S. Forest Service, Natural Resource Conservation Service, Bureau of Land Management, Fish and Wildlife Service, and Park Service. Graduates are well prepared to deal with complex issues involving wildlife and wildlands management and the overall conservation of natural resources.

Program Requirements | View MAP | View Program Outcomes

1. Complete the following:

BIO 447 : Mammalogy. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 220A; or PWS 344

DESCRIPTION: Mammalian diversity, evolution, distribution, and natural history. Two three-day field trips required.

Course Outcomes

- Be able to recognize the more common species of Utah mammals based on external and skull features
- Be able to recognize and identify most orders of mammals based on features of the skull
- Understand the evolutionary history of mammals and the modern diversity of mammalian orders
- Enhance skills directed toward understanding and interpreting original scientific literature dealing with mammalian biology

NDFS 330 : Comparative Animal Nutrition. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Comparative digestion, absorption, and utilization of nutrients and nutritional applications of domestic, pet, and wildlife species.

Course Outcomes

- Demonstrate an understanding of the diverse digestive systems in the animal kingdom.
- Demonstrate an understanding how changes in digestive systems affect both nutrient requirements and affect feeding types and systems.
- Apply the roles of nutrients in cellular metabolism.
- Explain how nutrient deficiencies affect body function and performance.
- Demonstrate knowledge of animal feed formulation.

PWS 100 : Living with Plants. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Introduction to principles of plant function and diversity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

- Demonstrate a fundamental knowledge of basic principles and concepts of plant biology (i.e., structure, function, and diversity)
- Cultivate an appreciation for the central importance of plants in the way our world and human society functions
- Provide a conceptual framework of how plants influence the environment
- Practice using the scientific method to better understand plant-environment interactions
- Improve verbal and written communication

PWS 115 : Introduction to Wildlife and Wildlands Conservation. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: Assisting students in choosing individual professions and curricula.

Course Outcomes

- Student will be able to make an informed decision on majoring in Wildlife and Wildlands Conservation based on career opportunities and course work required to qualify for career positions.

Students will be able to articulate stewardship responsibilities of managers to represent multiple uses of resources by multiple users with divergent opinions and perspectives.

PWS 215 : Principles of Range Management. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Overview of rangeland resources and management principles, including rangeland classification, multiple use management, natural resource policy, and grazing management.

Course Outcomes

- Describe rangeland physical characteristics, types, physiology, and ecology
- To understand the principles of stewardship and how they apply to Rangelands
- To understand the importance of rangeland grazing, how it is managed, and nutrient needs of livestock and wildlife
- Describe multiple use management and its implications to wildlife and livestock
- To improve reading and writing skills relating to scientific research

PWS 225 : Principles of Wildlife and Fisheries Management. (3:3:0)

WHEN TAUGHT: Winter

RECOMMENDED: PWS 115.

DESCRIPTION: Basic principles of fish and wildlife management, their habitats, and their human users. Ecological concepts, population dynamics, nutrition, behavior, population assessment, management strategies, habitat sampling and management.

Course Outcomes

- Learning Outcome #1: Identify and articulate stewardship for the creation as a basis for professional judgment.This course not only provides an understanding of tools used by wildlife and fisheries managers to restore, revive, and maintain wildlife and fish populations, but also discusses our stewardship roles and responsibilities for those aspects of the creation.
- Learning Outcome #2: Identify wildland plants, soils, and wildlife species and understand how they function in the environment.This course introduces students to a number of wildlife and fish species, and basic ecological concepts as they relate to wildlife and fisheries. Students will understand the ecological roles, habitat needs, and interactions of fish and wildlife at various levels in an ecosystem
- Learning Outcome #3: Apply an understanding of ecological processes to wildlife management.This course includes an extensive overview of basic ecological processes and how to use them for fish and wildlife management.
- Learning Outcome #4: Demonstrate the ability to apply the scientific method and analytical thinking to ecological and management issues.In this course students will be rigorously taught the scientific method and given opportunities to demonstrate the understanding through fish and wildlife management problem solving. They will have writing assignments that provide opportunities for the synthesis and expression of the depth of their understanding. The term paper required in this course may be used for one of the “three written papers relating to stewardship ethics and management situations” that will be placed in the student’s portfolio required for graduation with a Wildlife and Wildlands Conservation BS degree.

PWS 275 : Genetics and Reproduction. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Any general biology course.

DESCRIPTION: Principles of inheritance.

Course Outcomes

- Identify and articulate principles of stewardship as a basis for professional judgment.
- Apply knowledge of genetics to conservation and management of natural populations.
- Provide a foundation in the basic and applied principles of genetics for natural resource management andconservation.

PWS 282 : Introduction to Soil Science. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 283 or concurrent enrollment.

DESCRIPTION: Physical, chemical and microbiological properties of soils that affect plant growth in natural, agricultural, and urban environments.

Course Outcomes

- Enhance critically thinking skills as they apply to soil resource management and conservation
- Demonstrate a fundamental knowledge of soil chemistry, genesis, microbiology, physics, taxonomy, and nutrient and water relations
- Create a conceptual framework to help manage soil resources (i.e., animal habitat, plant nutrient fertility, salinity, soil and water quality, and wind and water erosion) in agricultural, urban, and ecological settings
- Understand the historical and current problems, and cultural concerns facing soils as a natural resource essential to human life

PWS 283 : Introduction to Soil Science Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 282 or concurrent enrollment.

DESCRIPTION: Laboratory techniques in determining soil physical, chemical, and fertility properties.

Course Outcomes

- Understand basic soil assessments related to soil chemistry, physics, biology, and nutrient fertility
- Apply laboratory techniques to determine problems associated with soil resource conservation and management

- Conduct basic soil methods in nutrient analysis; textural classification; and organic matter, cation exchange capacity, acidity, and alkalinity content

PWS 330 : Rangeland Plant Identification and Ecology. (3:2:3)

WHEN TAUGHT: Winter

DESCRIPTION: Identification, characteristics, phenology, distribution, site adaptation, forage value, and response to management of significant range and pasture plants.

Course Outcomes

- Students will be able to sight identify many common range plants of North America
- Students will be able to use a grass key to identify unknown grasses
- Students will be able to pair symptoms of sick animals with poisonous plants that may have been consumed

PWS 344 : Natural History of Wildlife. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

RECOMMENDED: PWS 225 or equivalent.

DESCRIPTION: Wildlife species and their habitats, including ecology, life histories, adaptations, behavior, genetics and population viability variables, and the ethics of global stewardship. Field trips required.

Course Outcomes

- In this course, students will be rigorously taught the scientific method and given opportunities to demonstrate the understanding through wildlife ecology problem solving. They will have writing assignments that provide opportunities for the synthesis and expression of the depth of their understanding.
- This course introduces students to a number of wildlife and fish species, and basic ecological concepts as they relate to wildlife and fisheries. Students will understand the biology, ecological roles, habitat needs, ecological adaptations, and interactions of fish and wildlife at various levels in an ecosystem.
- Be able to define “natural history” and be able to describe basic concepts and principles that comprise the natural history of an organism
- Gain an appreciation for the diversity of lifestyles among vertebrates
- Develop critical reading and thinking skills
- Improve oral and written communication skills

PWS 350 : Rangeland Ecology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 150 or Bio 100 or Bio 130 or PDBio 120.

DESCRIPTION: Distribution and abundance of organisms and their interactions with the physical and biotic components of the earth emphasizing rangeland ecosystems.

Course Outcomes

- Demonstrate a fundamental knowledge of ecological principles and the multiple dimensions of biodiversity.
- Possess a working knowledge of the ecology relating to soil, water, and air conservation.
- Understand how global and geologic processes affect life on earth.
- See the connectivity and relevance of ecology to other fields of study.
- Understand the importance of ecology to issues regarding human well-being.

PWS 355 : Rangeland Vegetation Measurements and Analysis. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Field methodologies for vegetation inventories and analysis (density, biomass, cover, frequency, utilization, etc.) in wildland settings.

Course Outcomes

- Students will be able to demonstrate, through lab exercises and write-ups, an understanding of ecological processes that drive secondary succession in wildland ecosystems which in turn impact management decisions.
- Students will be able to apply vegetation data collection techniques to quantify vegetation and make interpretations used in resource management decisions.

PWS 357 : Techniques for Wildlife Investigations and Management. (3:2:3)

WHEN TAUGHT: Fall

RECOMMENDED: PWS 350, 355.

DESCRIPTION: Investigatiion and management of fish and wildlife populations. Methods for population assessment, capture, handling, marking, radio-telemetry, behavioral studies, and human disturbance. Lab is required.

Course Outcomes

- The purpose of this course is to introduce students to a variety of methods used by wildlife biologists for the investigation and management of wildlife. Course content prepares students to observe wildlife, research wildlife literature, to rigorously apply the scientific method for problem solving, to evaluate data objectively, and to communicate research results effectively. This course is built upon principles of biodiversity, ecology, population dynamics, habitat, and conservation.

PWS 375 : Environmental Policies and Laws. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Inception, current state, and future directions of seminal environmental policies and laws established in the US to improve environmental quality. Application of policies and laws in resource conservation and management, including a National Environmental Policy Act certification program.

Course Outcomes
- Demonstrate a fundamental understanding of the inception, current state, and future needs of the five seminal developments in environmental policy and law (i.e., Clean Air Act; Clean Water Act; National Environmental Policy Act; Comprehensive Environmental Response, Compensation, and Liability Act or Superfund; and the Endangered Species Act)
- Create your own conceptual framework for analyzing policy change in the United States and abroad, and understand the role of government, society, and economics in shaping this framework
- Understand the formal institutional setting in which policy is developed, the major participants involved, and the role of science in shaping policy
- Gain a basic understanding of how environmental laws (e.g., statutes, cases, and common laws) operate to regulate our interaction with the environment and one another
- Write more effectively and concisely

PWS 416 : Rangeland Vegetation Improvement. (3:2:3)

WHEN TAUGHT: Fall
RECOMMENDED: PWS 330, 350.
DESCRIPTION: Habitat improvement for domestic and wild animals. Plant control by mechanical equipment, herbicides, and prescribed fire. Restoration of disturbed lands.
NOTE: Field trips required.

Course Outcomes
- Apply the historical and successional history of land to current rangeland vegetation conditions and treatments
- Describe and plan biological, chemical, mechanical methods, and fire to achieve land management goals.
- Assess site potential and fuels relative to potential vegetation changes with and without management.
- Apply and plan revegetation, fire rehabilitation, and restoration practices to rangelands.
- Integrate plant control, revegetation and other restoration practices to meet land management goals
- Become familiar with approaches, practices, and outcomes of rangeland vegetation improvements in actual field situations.

PWS 417 : Rangeland Planning and GIS. (3:2:3)

WHEN TAUGHT: Winter
RECOMMENDED: PWS 215, 225, 350.
DESCRIPTION: Development of a multiple-use natural resource plan for watershed forestry, recreation, wildlife, and livestock. Policies that govern planning and conflict resolution.

Course Outcomes
- Identify and articulate stewardship for the creation as a basis for professional judgment.
- Apply an understanding of ecological processes to wildland management
- Demonstrate ability to apply the scientific method and analytical thinking to ecological and management issues.

PWS 446 : (PWS-Bio) Ornithology. (3:2:3)

WHEN TAUGHT: Winter
PREREQUISITE: Bio 100 or Bio 130 or PDBio 120 or PWS 100 or equivalent or instructor's consent.
DESCRIPTION: Avian systematics, evolution, distribution, identification, and natural history.
NOTE: One three-day field trip required.

Course Outcomes
- 1) Define ornithology and what it encompasses
- 2) Become proficient in bird identification (sight, sound, sign)
- 3) Develop an understanding of the unique characteristics of birds
- 4) Understand the current thinking regarding the evolution of birds
- 5) Describe the life history characteristics of birds and their annual cycle

PWS 492 : Wildlife and Wildlands Conservation Senior Seminar. (1:1:0)

WHEN TAUGHT: Winter
DESCRIPTION: Capstone course bringing together portfolios, student experiences, exams, and exercises necessary for completing and assessing wildlife and wildlands program learning outcomes.

Course Outcomes
- Students will understand how to take the next step toward permanent employment or post-graduate training.
- Students will pass plant, mammal, and bird ID competency exams as well as a comprehensive discipline exam.
- Students will build a professional portfolio that will demonstrate their specific training, experience, skills and abilities relative to Wildlife and Wildlands Conservation.

2. Complete 15 elective credit hours from the following course list. With the help of your advisor, select courses to qualify for 2–3 federal job series (wildlife biologist, ecologist, range conservationist, GIS specialist, soil conservationist, botanist, fisheries biologist):

BIO 220A : Biological Diversity: Animals. (4:3:3)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Comparative organization and evolutionary significance of morphological, physiological, reproductive, and ecological differences in invertebrates and vertebrates. Laboratory included.

Course Outcomes
- Students will be able to discuss the broad patterns of the evolution of the clade Animalia, emphasizing the relationships among major sub-clades (phyla), the unique biological attributes that define these clades, and the novel changes in morphology over major transitions (unicellular to multicellular; acoelomate to pseudocoelomate to coelomate body plans, bilaterial vs radial symmetry, origins of exoskeletons, gill slits, notochord, crania & vertebral columns, etc.).
- Students will develop the skills necessary to understand the terminology of phylogenetic systematics and methods used to recover the “tree of life”, the logic behind the hierarchy (i.e., the only possible outcome of the process of “descent with modification”), and critically apply evolutionary reasoning, including the use of phylogeny and tree-thinking, to formulate and test hypotheses that explain biological diversity.
- Students will have the intellectual tools to continue to explore related topics with confidence and understanding throughout their lives, and a deeper appreciation for the diversity of life on earth.

BIO 220B : Biological Diversity: Plants. (4:3:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Comparative organization and evolutionary significance of morphological, physiological, reproductive, and ecological differences in fungi, algae, and principal groups of land plants. Laboratory included.

Course Outcomes
- Students will be able to discuss differences between cyanobacteria, algae, bryophytes, non-seed vascular plants, gymnosperms, flowering plants, and fungi with repsect to their lifecycles, characteristic morphologies, and biological roles.
- Students will develop the skills necessary to understand and critically apply evolutionary logic including the use of phylogeny and tree-thinking to formulate and test hypotheses that explain biological diversity
- Students will be able to continue to explore related topics with confidence and understanding throughout their lives.

BIO 270 : Animal Restraint. (1:0:2)

WHEN TAUGHT: Winter

DESCRIPTION: Restraint and first aid techniques for pet, laboratory, domestic, and wild animals.

Course Outcomes
- Know how to safely restrain domestic animals and wildlife species
- Understand basic animal restraint techniques for a number of domestic and wildlife species
- Understand why certain restraint techniques work with only certain animals and not others
- Develop a basic knowledge of animal chemical restraint methods and their indications
- Understand why the use of pharmaceutical agents by lay persons is not advocated without a veterinarian's prescription or special knowledge and training of non-veterinarian personnel, such as wildlife biologists

BIO 352 : Introduction to Marine Biology. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: BIO 220A

DESCRIPTION: Marine life, the sea as an environment, and research methods.

Course Outcomes
There are no course outcomes available

BIO 380 : Comparative Animal Physiology and Anatomy. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 220A or instructor's consent.

DESCRIPTION: Structure and function of animal organ systems; structural and physiological responses to demands of and changes in environment; evolutionary constraints on anatomy and physiology.

Course Outcomes
- Students will demonstrate a fundamental knowledge of comparative vertebrate animal physiology and anatomy.
- Students will develop critical thinking skills while learning concepts and understanding the tools used by comparative vertebrate animal physiologists and anatomists to study function and structure.
- Students will use physiological and anatomical knowledge to enhance their personal lives.
- Students will use their skills and knowledge in comparative vertebrate animal physiology and anatomy to secure employment or to advance in higher education in biology-related disciplines.
- Students will develop an understanding of physiologic isotopic techniques utilized to indicate energy sources, trophic levels, body water, and latitudinal and altitudinal animal migration reflected by stable isotopes of carbon, nitrogen, hydrogen and oxygen.

BIO 420 : Evolutionary Biology. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PWS 340

RECOMMENDED: Concurrent enrollment in Bio 421.

DESCRIPTION: Intensive examination of evolution as the conceptual cornerstone of biology.

Course Outcomes

- Students will be able to describe the history and development of evolutionary thought.
- Students will be able to list and describe the evidence for evolution and its required corollaries.
- Students will be able to describe the mechanisms by which evolution occurs. Provide detailed explanations of the the processes of evolution by mutation, migration, genetic drift, non-random mating, and natural selection.
- Students will be able to explain adaptation, providing examples from several different fields of biology (e.g., cell biology, physiology, conservation biology, bioinformatics, medicine, behavior, etc.).
- Students will be able to describe the history of life on earth. Identify major evolutionary transitions over time, and explain the tools and evidence that support current hypotheses of the history of life.

BIO 430 : Plant Classification and Identification. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 100 or Bio 130 or PDBio 120 or PWS 100 or instructor's consent.

DESCRIPTION: Principles of plant systematics, taxonomy, and classification, emphasizing family recognition by sight, terminology, and use of identification keys to the temperate flora.

Course Outcomes

- Students will apply correct vocabulary for describing plant parts and be able to deduce the meaning of new terms based on knowledge of common roots, prefixes, and suffixes.
- Students will recognize the major groups of vascular plants, be able to differentiate them by their principal characters, and understand their phylogenetic relationships.
- Students will identify by sight 40 families of flower plants as well as common families of ferns and gymnosperms, by recognizing differentiating features of each family.
- Students will gain proficiency in the use of keys and identification manuals for identifying any unknown plant to species.

BIO 441 : Entomology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 220A or equivalent.

DESCRIPTION: External morphology, natural history, evolution, distribution, and phylogeny of insects. Insect collection required.

Course Outcomes

- Understand basic principles of morphology and systematics and apply these principles to your own knowledge of insects.
- Judge genetic relationships. Be able to recall current hypotheses of insect phylogeny at the ordinal level and have the tools needed to judge validity of new hypotheses of phylogeny that might be proposed. You will also study carefully the modifications associated with phylogenies that led to insect diversification and success.
- Understand details of insect morphology, and be well versed in both internal and external body structures.
- Recognize common insect families and be able to quickly identify them on sight.
- Gain or regain a sense of wonder for the natural world, especially as it relates to insects and other arthropods. Gain perspectives of the diversity and complexity in the insect world. Enhance your appreciation for the natural world we share with them.
- Learn life histories and specific collecting techniques for insects in their own habitats. You will learn how they fit in the natural world.
- Learn the protocols for detailed identificiations. Many insects will be totally new in appearance to you. You will use identification guides and illustrations to help you decide what the name of an insect is at the Order and Family levels.
- Use a variety of identification techniques to correctly identify insects and other arthropods. Throughout your life you will be asked by employers, friends, and family to answer the question, "What is this?" This course will give you these exact skills. A correct identification is a beginning step to learning more about a species and its relationships to the natural world and its pragmatic relationship to humans.

BIO 442 : Advanced Invertebrate Zoology. (5:6:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: BIO 220A

DESCRIPTION: Functional morphology, cladistics, ecology, behavior, and interrelationships of invertebrates.

Course Outcomes

There are no course outcomes available

BIO 443 : Ichthyology. (3:2:3)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: BIO 220A

DESCRIPTION: Fish systematics, evolution, morphology, distribution, and natural history.

Course Outcomes

- Students will have a general understanding of fish respiration.
- Students will have a general understanding of fish body structure.
- Students will have a general understanding of fish food processing.
- Students will have a general understanding of fish behavior and communication.

BIO 445 : Herpetology. (4:3:2)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: BIO 220A

DESCRIPTION: Reptile and amphibian evolution, systematics, morphology, distribution, and natural history. Lab emphasizes taxonomy, classification, and distribution of western U.S. species.

Course Outcomes

- Each student will gain a deeper understanding of some details of the origin of tetrapods, and the origin of the amniotes.
- Each student will gain a deeper understanding of the phylogenetic position of extinct and extant clades of amphibians & reptiles within the clade Vertebrate.
- Each student will acquire a detailed knowledge of the evolution and natural history (natural history, behavior, etc.) of the major clades of extant amphibians and reptiles .
- Through lab and field experiences, each student will acquire a detailed knowledge of diagnostic characters, taxonomy & distributions, and some aspects of ecology of native western species.
- Each student will acquire some knowledge of the conservation status of selected species in the US and abroad.

BIO 450 : Conservation Biology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 220A & BIO 350; or BIO 220B & BIO 350

DESCRIPTION: Scientific principles of conservation: applying population genetics, and phylogenetic and ecological theory to preservation of biological diversity; developing sustainable ecological systems compatible with human resource use.

Course Outcomes

- Apply an understanding of ecological processes to conservation of populations, species, and ecosystems.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Demonstrate the ability to apply the scientific method and analytical thinking to ecological and conservation issues.
- Demonstrate the ability to synthesize literature relevant to a topic in conservation bioloigy
- Demonstrate the ability to write a scientific term paper

BIO 452 : Introduction to Marine Sciences. (4:3:1)

WHEN TAUGHT: Contact Department. ; Spring Even Yrs.

PREREQUISITE: Instructor's consent.

DESCRIPTION: Principles of physical oceanography, biodiversity, and ecology of numerous ocean habitats. Extensive field trips.

Course Outcomes

There are no course outcomes available

BIO 453 : Development of Marine Animals. (3:0:6)

WHEN TAUGHT: Contact Department.

PREREQUISITE: BIO 352; Instructor's consent.

DESCRIPTION: Culturing, studying, and reporting on the development of eggs, embryos, and larvae of marine animals.

Course Outcomes

There are no course outcomes available

BIO 525 : Animal Disease, Biosecurity, and Zoonoses. (3:3.0:0)

WHEN TAUGHT: Winter

PREREQUISITE: Bio 380 or instructor's consent.

DESCRIPTION: Animal disease emphasizing prevention, organ systems affected, biosecurity, and zoonotic potential.

Course Outcomes

- Comparative pathophysiology will be taught using canine, feline, bovine, ovine, caprine, equine, lab animals, and wildlife examples
- Understand basic animal pathophysiology of disease on an organ system basis and preventive measures to maintain animal health
- Identify biosecurity practices to prevent animal disease
- Differentiate between zoonoses, sapronoses and anthroponoses and understand how to institute preventive measures and management practices to avert these health problems
- Design a herd health program with preventive measures that addresses nutrition, sanitation, housing, ventilation, lighting, and other components for a particular species the student wants to work with as a producer
- Understand how to institute good management procedures that can prevent the occurrence of animal disease
- Develop a basic knowledge of animal immunology as it pertains to disease induction and prevention, with natural and artificial immunity practices that should be implemented to enhance disease prevention, and nutritional practices to optimize animal immunity

BIO 541 : Aquatic Entomology. (4:2:4)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: Bio 441 or equivalent.

DESCRIPTION: Morphology, classification, biology, and functional ecology of aquatic insects. Field trips required.

Course Outcomes

- Develop an appreciation for the diversity of the living aquatic insect world.
- Learn to become better stewards of the earth and its living inhabitants.
- Understanding of all aquatic biology.

BIO 556 : Limnology. (3:2:4)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Bio 350, Chem 106; or equivalents.

DESCRIPTION: Lakes, reservoirs; their biota and physical/chemical properties.

Course Outcomes

- Understand the major physical processes that form and characterize lentic habitats.
- Understand the dominant chemical processes that occur in lake systems.
- Understand how organisms adapt to the above physical and chemical constraints.
- Gain teaching experience through preparing a Powerpoint presenting your study presentation to the class.
- Experience pursuing a focused research topic from the initial question to a competed report.

BIO 557 : Stream and Wetland Ecology. (4:3:4)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Bio 350, Chem 106; or equivalent.

DESCRIPTION: Stream and wetland ecology; their biota and their physical/chemical properties.

Course Outcomes

- Develop an understanding of streams and wetlands within the broader context of ecology and conservation.
- Become familiar with the major conservation issue in streams and wetlands and the underlying ecological concepts.
- Initial exposure to the current literature.
- Develop skills related to critical thinking. That is, learn how to: a) read critically and summarize information, b) draw conclusions and synthesize information to develop new questions and hypotheses, and c) design experiments or comparative studies. It is important to start early to learn how to think, read, and write critically.

GEOG 211 : Map Use and Interpretation. (4:4:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Maps as tools for spatial analysis of problems in physical and cultural geography.

Course Outcomes

- Identify each component of the â Big Threeâ when using or observing geographic technologies. The Big Three includes 1) Geographic Information Systems, 2) Global Positioning Systems, and 3) Remote Sensing.
- Complete all typical map scale calculations related to land distance and area including unit conversions.
- Give and take coordinate references in UTM and lat / long and convert between the two. select a datum and coordinate system appropriate for a given job-related task. Explain the logic of and give / take a reference in the PLSS
- Configure a GPS receiver properly to use both with and without a map. Lay-in and follow the course in a GPS receiver.
- Measure elevation, distance, direction, slope, and aspect from digital or paper topographic maps. Perform a simple statistical analysis of data on a USGS topographic map.
- When presented with a typical specimen, perform a simple interpretation of a thematic map (e.g. Choropleth, Isoline)

GEOG 212 : Introduction to Geographic Information Systems. (3:2:1)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Concepts in the use of small- and large-scale digital map data, emphasizing landscape interpretation and feature description.

Course Outcomes

- Understand basic spatial concepts and data models that form the foundation of GIS.
- Acquire geospatial data from common sources and manipuate them for a specific application.
- Analyze data using GIS to solve real world problems.
- Describe several applications in which GIS is used to solve geographic problems.
- Design and use maps to explore and communicate geospatial information.

GEOG 306 : Public Land Conservation. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Environmental and social geography of public lands; analyzing historical, planning, management, and ecological issues.

Course Outcomes

There are no course outcomes available

GEOG 412 : Problem Solving with Geographic Information Systems. (3:3:1)

WHEN TAUGHT: Fall Contact Department

PREREQUISITE: GEOG 212

RECOMMENDED: Geog 222.

DESCRIPTION: Solving practical geographic problems and performing scientific research using raster and vector analysis tools in GIS.

Course Outcomes

There are no course outcomes available

PDBIO 482 : Developmental Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PDBIO 360

RECOMMENDED: PDBio 325.

DESCRIPTION: Invertebrate and vertebrate developmental biology. Embryonic gastrulation, neurulation, pattering, etc. Modern approaches and research strategies. Emphasizes gene function, cell signaling, signal transduction during embryogenesis.

Course Outcomes

- Students will be able to generally describe the early development (from fertilization to axis formation) of one invertebrate and one vertebrate model organism.
- Students will be able to generally describe the concepts of cellular competence, induction, specification, commitment and differentiation in embryonic development.
- Students will be able to give two examples of organogenesis, including genes and signal transduction pathways that lead to organ system formation.
- Students will be able to explain embryonic patterning, using examples that include genes known to act in patterning events.
- Students will be able to explain at least two concepts in developmental biology that overlap with other sciences, such as stem cell research, cancer research, evolutionary sciences, or neuroscience.
- Students will be able to discern and summarize the current state of knowledge on a given topic, construct pioneering research questions on that topic, and propose experiments aimed at answering those questions.

PWS 270 : Animal Husbandry. (3:2:3)

WHEN TAUGHT: Winter

DESCRIPTION: Introduction to animal husbandry and management techniques for domestic and wild animals.

Course Outcomes

- Integrate livestock husbandry and management practices with wildlife management.
- Learn important aspects of livestock stewardship through daily care and management.
- Understand how livestock production can and will impact wildlife ecology.

PWS 301 : Plant Growth and Reproduction. (3:2:2)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 100 or equivalent.

DESCRIPTION: Scientific principles of plant propagation by seeds, cuttings, budding and grafting, and tissue culture.

Course Outcomes

- Students will take a pre- and post-test for foundational principles related to this course and will show learning by an increase of at least double the average score.
- Students will complete a class project that involves the use of foundation principles in this course and use this written project for their portfolio.

PWS 303 : Soils Conservation and Resources. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 282 & CHEM 105; or PWS 282 & CHEM 101; PWS 100 or equivalent; Math 110 or equivalent.

RECOMMENDED: Geol 111.

DESCRIPTION: Taxonomy of world soils; conservation and management of agricultural, wildland, wetland, and urban soils.

Course Outcomes

- Understand soil physics, chemistry, taxonomy, and water movement to maintain natural resources.
- Apply soil conservation practices and principles to regions sensitive to soil degradation.
- Understand the history, development, and terminology associated with USDA Soil Taxonomy and be familiar with other soil taxonomic systems. Recognize soil orders and suborders from the physical and chemical characteristics of the soil

PWS 325 : Fisheries and Wetlands Management. (3:2:3)

WHEN TAUGHT: Fall

RECOMMENDED: PWS 225 or equivalent.

DESCRIPTION: Principles of fisheries and wetlands mangement, emphasizing managing fish populations and their diverse micro- and macro-habitats within the context of community and ecosystem dynamics. Case studies and models used to evaluate growth, recruitments, and mortality in age-structured populations in relationship to the dynamics of watershed and wetland landscapes.

Course Outcomes

- Understand ecological aspects of fisheries and wetland systems.
- Learn important aspects of fisheries and wetland management.
- Integrate concepts taught in class to other ecological systems.

PWS 411 : Watershed Management. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: BIO 350; or PWS 350

DESCRIPTION: Processes and management of the hydrologic cycle of forests and rangelands.

Course Outcomes

- Students will understand the history and policy that drives water management in the western US.
- Students will understand ecological and hydrological processes and concepts and apply them to watershed management actions such as harvesting, grazing, and restoration.
- Students will be able to apply assessment and classification tools to watersheds and their components to determine how management actions affect hydrologic responses.

PWS 413 : Safety Certifications for Field Biologists. (1-3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Certification modules promoting field safety to prepare students to be leaders in workplace safety. Specific trainings include first aid, CPR, hot and cold weather exposure, ATV and snowmobile operation, wild animal safety, and more.

Course Outcomes

- Upon completion of this course, students will be certified in the use of ATVs, wilderness first aid, CPR, firearms, rope handling, defensive driving, chainsaws, fire extinguishers, bear safety, and other field biologist-related safety trainings.
- Students will develop a safety mindset that will serve them throughout their lives.
- Students will learn to recognize workplace hazards and how to respond appropriately to them.

PWS 419 : Forest Management and Ecology. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Managing forests, emphasizing ecosystem managment.

NOTE: Field trips required.

Course Outcomes

- 1. Articulate their role as stewards over forested environments.
- 2. Appreciate the diversity of forests world-wide and their importance to human populations.
- 3. Apply knowledge of forest structure, function, and process in making management decisions
- 4. Be able to quantify forest structure and production
- 5. Recognize forest pests and diseases and know appropriate control techniques.
- 6. Relate forests to wildlife habitat
- 7. Identify 75 tree species located in Utah and on BYU campus.

PWS 424 : Wildlife Law Enforcement. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: Bio 100 or equivalent.

DESCRIPTION: Current and historical principles of federal and state wildlife law enforcement, case development, evidence, evaluation, human rights, and testimony.

Course Outcomes

- Become familiar with significant wildlife laws
- Interact with professionals in the field
- Gain exposure to the methods and process of wildlife law enforcement

PWS 440 : Plant Physiology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: GE Biological Science requirement; college chemistry

RECOMMENDED: Chem 285; or 351, 352.

DESCRIPTION: Photosynthesis, respiration, water relations, mineral nutrition, growth of flowering plants.

Course Outcomes

- Students will be fluent in understanding plant function at the molecular, biochemical and whole plant levels
- Students will understand the connections between plant function and ecosystem processes
- Student will practice applying the scientific method in order to develop critical thinking and problem solving skills
- Student will engage in learning activities that increase there writing and speaking proficiency

PWS 511 : Environmental Biophysics: Soil and Plant Water Relations. (4:3:2)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Phscs 105 and PWS 282; or equivalents.

DESCRIPTION: Integrating biological, physical, and chemical processes of water and solute movements through the soil-plant-atmosphere continuum.

Course Outcomes

- Students will take a pre- and post-semester exam and at least double their score to assess understanding of the importance of physics in biological systems.

PWS 512 : Rangeland Landscape Ecology and Geographic Information Systems. (3:2:3)

WHEN TAUGHT: Fall Odd Yrs.

RECOMMENDED: PWS 215, Geog 212.

DESCRIPTION: Applying landscape ecology theory to evaluate, describe, and predict spatial patterns and processes within rangeland ecosystems using geographic information systems (GIS), remote sensing, and global positioning systems (GPS).

Course Outcomes

Students will be able to apply landscape ecology theory to evaluate, describe, and predict spatial patterns and processes in wildlife ecosystems. This will be furthered by synthesis of the literature and current theory.

PWS 547 : Ungulate Conservation and Management. (2:2:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: PWS or Bio 350; and Bio 447; or equivalents.

DESCRIPTION: Integrating principles of natural history, population ecology, behavior, and conservation biology of North American ungulates. Special emphasis on management and conservation applications.

Course Outcomes

- Will understand and be able to articulate current understanding concerning the role of ungulates in ecosystems
- students will develop the ability to critically think by reviewing and evaluating scientific articles or book chapters that examine ungulate ecology
- Students will develop presentation skills

PWS 553 : Restoration Ecology. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: PWS 282, 416; Bio 350; or equivalents.

DESCRIPTION: Nature of ecosystem disturbance and plant succession; developing science and practice of ecological restoration; case studies of applied restoration.

Course Outcomes

- Students will understand the applications of plant population ecology, ecophysiology, and community ecology to restoration ecology.
- Students will understand the processes of plant succession as the foundation for restoration ecology.
- Students will be able to apply restoration ecology and techniques to practical problems such mined and other drastically-disturbed lands, disturbed terrestrial and riparian or wetland systems, and invasive species concerns

PWS 554 : Wildlife Behavioral Ecology. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: Bio 100, 350; or equivalents.

DESCRIPTION: Integrating principles of ethology, sociobiology, and behavioral ecology using examples from wildlife resources; behavioral sampling methods.

NOTE: Field trips required.

Course Outcomes

- Students will become familiar with the basic principles of animal behavior including:An introduction to the basic principles of animal behaviorA review of natural selection and its role in shaping animal behaviorA study of proximate factors which influence behaviorThe role of learningCooperationForagingAntipredator behaviorCommunicationHabitat selection, territoriality, and migrationAggressionPlayAging and diseaseAnimal personalities

Recommended Courses for Preprofessional Track

These recommended preprofessional courses can be used to satisfy the elective credits above.

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

Course Outcomes

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

Course Outcomes

- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes

- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

Course Outcomes

- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 352 or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.

NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes

- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: High school algebra and trigonometry.

RECOMMENDED: Concurrent enrollment in Phscs 107.
DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes
There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 105 or equivalent.
RECOMMENDED: Concurrent enrollment in Phscs 108.
DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes
There are no course outcomes available

PHSCS 107 : General Physics Lab 1. (1:0:3)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Phscs 105 or concurrent enrollment.
DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 106 or concurrent enrollment
DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PDBIO 120 : Science of Biology. (2:2:1)
OFFERED: Honors also
WHEN TAUGHT: Fall; Winter; Summer
DESCRIPTION: General biology course designed for biological science majors, emphasizing the scientific method, cell theory, biochemical unity, the central dogma, bioenergetics, reproduction, and evolutionary theory.

Course Outcomes
There are no course outcomes available

PDBIO 305 : Human Physiology (with lab). (4:4:2)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Chem 101 or equivalent.
RECOMMENDED: A general biology course.
DESCRIPTION: Function of body organ systems.
NOTE: Not acceptable for physiology and developmental biology, biophysics, or neuroscience majors. Designed for students with basic chemistry / no molecular biology. Students with chemistry/molecular biology should take PDBio 362.

Course Outcomes
- Students will demonstrate the proper use of physiology terminology.
- Student will demonstrate a well-integrated and comprehensive understanding of the human body in health and disease.
- Students will use knowledge of cells and organ systems to solve problems related to the function of the human body.
- Students will demonstrate the necessary knowledge and skills in physiology that are required for their majors and future aspirations for graduate and professional school.
- Students will develop and demonstrate in their daily lives a deeper appreciation and respect for the human body.
- Students will demonstrate the knowledge to make informed personal (medical,ethical,and political)decisions regarding physiological concepts.

Or
PDBIO 362 : Advanced Physiology. (3:3:1)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220
DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.
NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes
- Students will manifest an understanding of how structures at the molecular level lead to properties

associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

Or

BIO 380 : Comparative Animal Physiology and Anatomy. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 220A or instructor's consent.

DESCRIPTION: Structure and function of animal organ systems; structural and physiological responses to demands of and changes in environment; evolutionary constraints on anatomy and physiology.

Course Outcomes

- Students will demonstrate a fundamental knowledge of comparative vertebrate animal physiology and anatomy.
- Students will develop critical thinking skills while learning concepts and understanding the tools used by comparative vertebrate animal physiologists and anatomists to study function and structure.
- Students will use physiological and anatomical knowledge to enhance their personal lives.
- Students will use their skills and knowledge in comparative vertebrate animal physiology and anatomy to secure employment or to advance in higher education in biology-related disciplines.
- Students will develop an understanding of physiologic isotopic techniques utilized to indicate energy sources, trophic levels, body water, and latitudinal and altitudinal animal migration reflected by stable isotopes of carbon, nitrogen, hydrogen and oxygen.

GIS Applications

Students interested in GIS applications should consider a minor in geographic information systems (20-23 hours). See the Geography Department for details.

*Hours include courses that may fulfill university core requirements.

Program Requirements | View MAP

1. Complete the following environmental science core courses:

PWS 150 : Environmental Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Conservation and management of natural resources concurrent with increasing socioeconomic and human population demands; factors such as soil, water, and air pollution, resources management, bioremediation, nutrient cycles, and global climate changes

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

- Gain a deep appreciation for the Lord's admonition to Adam and Eve regarding the Earth to dress it and keep it
- Engage others and participate in discussions about major environmental problems, movements, and solutions (e.g., desertification, invasive species, water pollution, green revolution, and renewable energy).
- Understand how "science" is conducted.
- Demonstrate a fundamental knowledge (i.e., scientific literacy) of the environment and current environmental problems facing us locally, regionally, and globally.
- Devise experiments with testable hypotheses based the scientific method—process of making observations and logically integrating those observations into a model of how the world works.
- Foster and promote environmental stewardship within your realm of influence and your community.

PWS 375 : Environmental Policies and Laws. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Inception, current state, and future directions of seminal environmental policies and laws established in the US to improve environmental quality. Application of policies and laws in resource conservation and management, including a National Environmental Policy Act certification program.

Course Outcomes

- Demonstrate a fundamental understanding of the inception, current state, and future needs of the five seminal developments in environmental policy and law (i.e., Clean Air Act; Clean Water Act; National Environmental Policy Act; Comprehensive Environmental Response, Compensation, and Liability Act or Superfund; and the Endangered Species Act)
- Create your own conceptual framework for analyzing policy change in the United States and abroad, and understand the role of government, society, and economics in shaping this framework
- Understand the formal institutional setting in which policy is developed, the major participants involved, and the role of science in shaping policy
- Gain a basic understanding of how environmental laws (e.g., statutes, cases, and common laws) operate to regulate our interaction with the environment and one another
- Write more effectively and concisely

2. Complete a minimum of 11 credit hours from the following course lists:

A. Complete at least six hours of the following supporting core courses:

PWS 282 : Introduction to Soil Science. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 283 or concurrent enrollment.

DESCRIPTION: Physical, chemical and microbiological properties of soils that affect plant growth in natural, agricultural, and urban environments.

Course Outcomes

- Enhance critically thinking skills as they apply to soil resource management and conservation
- Demonstrate a fundamental knowledge of soil chemistry, genesis, microbiology, physics, taxonomy, and nutrient and water relations
- Create a conceptual framework to help manage soil resources (i.e., animal habitat, plant nutrient fertility, salinity, soil and water quality, and wind and water erosion) in agricultural, urban, and ecological settings
- Understand the historical and current problems, and cultural concerns facing soils as a natural resource essential to human life

PWS 283 : Introduction to Soil Science Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 282 or concurrent enrollment.

DESCRIPTION: Laboratory techniques in determining soil physical, chemical, and fertility properties.

Course Outcomes

- Understand basic soil assessments related to soil chemistry, physics, biology, and nutrient fertility
- Apply laboratory techniques to determine problems associated with soil resource conservation and management
- Conduct basic soil methods in nutrient analysis; textural classification; and organic matter, cation exchange capacity, acidity, and alkalinity content

PWS 305 : Soils and Water Quality. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 282 & CHEM 105; or PWS 282 & CHEM 101; PWS 100 or equivalent; Math 110 or equivalent.

DESCRIPTION: Principles and practices of safe management of agricultural and urban wastes; amendments and nutrients including remediation methods for conservation of soils and water quality.

Course Outcomes

- Evaluate case studies in current topics soil and water quality
- Demonstrate a fundamental knowledge in water quality and water resource conservation as influenced by soil-water-atmosphere interactions
- Enhance critically thinking skills as it relates to issues in water quality management and resource conservation
- Improve mathematical and statistical skills related to nutrient, salinity, sodicity, and toxicity evaluation and management

PWS 345 : Air Quality and Pollution. (2:2:0)

WHEN TAUGHT: Winter

DESCRIPTION: Origin, effects, ecology, and management of major atmospheric pollutants - current topics in air quality, methods for quantifying pollutants and assessing air quality, and policy and management principles governing air as a natural resource.

Course Outcomes

There are no course outcomes available

PWS 365 : Environmental Microbiology. (3:3:0)

WHEN TAUGHT: Fall

RECOMMENDED: Chem 101 or 105; PDBio 120; PWS 150.

DESCRIPTION: Environmental microbiology in aquatic and terrestrial systems. Detecting, enumerating, and identifying microorganisms. Bioremediation of organic and metal pollutants. Microbial-mediated transformations in nutrient cycling. Spread of pathogens.

Course Outcomes

- Demonstrate a fundamental knowledge of the environmental microbiology surrounding soil, water, and air conservation, quality, and pollution
- Understand the basic chemistry, biochemistry, and physics associated with the bioremediation, nutrient cycling, and pathogenesis
- Foster and promote environmental stewardship within yourself and your community
- Write and orally communicate more effectively and concisely

PWS 366 : Environmental Microbiology Lab. (1:0:3)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 365 or concurrent enrollment.

RECOMMENDED: Chem 101 or 105; PDBio 120; PWS 150.

DESCRIPTION: Laboratory and field techniques. Detecting, enumerating, and identifying microorganisms via microscopic and cultural assays. Microbial transformation and responses to pollutants. Detecting techniques evaluating coliforms and fecal coliforms, viruses, and parasites.

Course Outcomes

There are no course outcomes available

PWS 490 : Case Studies. (2:1:2)

WHEN TAUGHT: Contact Department.

PREREQUISITE: PWS 282

DESCRIPTION: Contemporary agricultural and environmental problems using decision case studies dealing with environmental technology issues and analysis.

Course Outcomes

There are no course outcomes available

PWS 494R : Mentored Learning Experience. (1-6:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Topics vary.
NOTE: Registration required for mentored experiences.

Course Outcomes

- Design and/or participate in basic experiments attempting to answer questions in biochemistry, biotechnology, genetics, molecular biology, and soil science
- Generate and analyze experimental results for publications or presentations at professional meetings
- Learn how to be an effective and efficient mentor

: Biotechnology Laboratory.

Course Outcomes

: Plant Physiology Laboratory.

Course Outcomes

: Environmental Science Laboratory.

Course Outcomes

: Soil, Plant, and Water Science Laboratory.

Course Outcomes

: Environmental Science Field Techniques.

Course Outcomes

Course Outcomes

B. Complete up to five hours from the following:

BIO 220A : Biological Diversity: Animals. (4:3:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Comparative organization and evolutionary significance of morphological, physiological, reproductive, and ecological differences in invertebrates and vertebrates. Laboratory included.

Course Outcomes

- Students will be able to discuss the broad patterns of the evolution of the clade Animalia, emphasizing the relationships among major sub-clades (phyla), the unique biological attributes that define these clades, and the novel changes in morphology over major transitions (unicellular to multicellular; acoelomate to pseudocoelomate to coelomate body plans, bilaterial vs radial symmetry, origins of exoskeletons, gill slits, notochord, crania & vertebral columns, etc.).
- Students will develop the skills necessary to understand the terminology of phylogenetic systematics and methods used to recover the “tree of life”, the logic behind the hierarchy (i.e., the only possible outcome of the process of “descent with modification”), and critically apply evolutionary reasoning, including the use of phylogeny and tree-thinking, to formulate and test hypotheses that explain biological diversity.
- Students will have the intellectual tools to continue to explore related topics with confidence and understanding throughout their lives, and a deeper appreciation for the diversity of life on earth.

BIO 370 : Bioethics. (2:1:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Introductory biology course.

DESCRIPTION: In-depth lecture and small group discussion of varied bioethical issues. LDS Church positions emphasized when appropriate.

Course Outcomes

- Students will understand the ethical and philosophical underpinnings of bioethics and to develop ethical intuitions on bioethical issues.
- Students will learn the terminology, vocabulary, and objectives of bioethics.
- Students will understand the tools and approaches needed to make a bioethical decision and to communicate that decision in rationally informed ways.
- Students will understand the bioethical primary literature, to understand how to read case studies, and familiarity with the major issues being discussed in bioethics today.

BIO 441 : Entomology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 220A or equivalent.

DESCRIPTION: External morphology, natural history, evolution, distribution, and phylogeny of insects. Insect collection required.

Course Outcomes

- Understand basic principles of morphology and systematics and apply these principles to your own knowledge of insects.
- Judge genetic relationships. Be able to recall current hypotheses of insect phylogeny at the ordinal level and have the tools needed to judge validity of new hypotheses of phylogeny that might be proposed. You will also study carefully the modifications associated with phylogenies that led to insect diversification and success.
- Understand details of insect morphology, and be well versed in both internal and external body structures.
- Recognize common insect families and be able to quickly identify them on sight.
- Gain or regain a sense of wonder for the natural world, especially as it relates to insects and other arthropods. Gain perspectives of the diversity and complexity in the insect world. Enhance your appreciation for the natural world we share with them.
- Learn life histories and specific collecting techniques for insects in their own habitats. You will learn how they fit in the natural world.
- Learn the protocols for detailed identificiations. Many insects will be totally new in appearance to you. You will use identification guides and illustrations to help you decide what the name of an insect is at the Order and Family levels.
- Use a variety of identification techniques to correctly identify insects and other arthropods. Throughout your life you will be asked by employers, friends, and family to answer the question, "What is this?" This course will give you these exact skills. A correct identification is a beginning step to learning more about a species and its relationships to the natural world and its pragmatic relationship to humans.

CHEM 101 : Introductory General Chemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 97 or equivalent.

DESCRIPTION: Atomic and molecular structure, periodic relationships, states of matter, chemical reactions and stoichiometry, acids and bases.

NOTE: Primarily for nonscience majors who require a broad introduction to general chemistry.

Course Outcomes

- Students will be able to view the world around them in chemical terms. Students will use the

concepts of atoms, molecules, and their properties to understand a variety of phenomena.
- Students will be able to make qualitative and/or quantitative predictions regarding a number of chemical concepts including chemical reactions and stoichiometry, calorimetry, osmosis, gases, acid/base chemistry, chemical equilibria, and radioactivity.

CHEM 103 : Introductory Chemistry Laboratory. (1:0:3)

PREREQUISITE: Chem 101 or concurrent enrollment or equivalent.

DESCRIPTION: Introductory laboratory techniques required for simple classical experiments in chemistry.

Course Outcomes
- Students will demonstrate fundamental chemical principes through laboratory experiments and explain the results in terms of those principles.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes
- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

Course Outcomes
- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

CHEM 107 : General College Chemistry Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 106 or Chem 112 or concurrent enrollment.

DESCRIPTION: Chemical properties, chemical reactions, collection and interpretation of data, preparation of reports.

NOTE: Required for most students needing one year of general chemistry.

Course Outcomes
- Through laboratory experiments, students will demonstrate that they can use precise scientific instrumentation to find quantitative answers to significant problems within the total precision allowed by the equipment.
- Students will demonstrate that they can perform simple experiments, observe the outcomes accurately, then make reasoned, accurate decisions about the meanings of the results.

CHEM 223 : Quantitative and Qualitative Analysis. (4:2:6)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: CHEM 107; or CHEM 113

DESCRIPTION: Principles of chemical equilibrium, quantitative chemical measurements, and qualitative detection of selected chemical species.

NOTE: Primarily for majors in molecular biology and the life sciences.

Course Outcomes
- Course Objectives: The course is designed to develop research skills. The labwork will have a somewhat bioanalytical focus, e.g. the chemical analysis of biological molecules or biologically related ions and the use of biomolecules in assays. We will work to develop good laboratory

practice, both conceptually and practically, and consider how to do good science. The combined lecture/lab approach will be used to help you understand quantitative approaches to analysis, sources of error, and the utility but also limitations of laboratory measurements. You will be asked to apply a portion of this knowledge to your own laboratory determinations. We will also discuss more advanced analytical methods involving chemical separations and instrumental analyses. This course fills one of the requirements for a minor in chemistry.

CHEM 227 : Principles of Chemical Analysis. (4:2:6)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: CHEM 113

DESCRIPTION: Principles of quantitative analysis, introductory instrumental methods, and computer applications to chemical analysis.

Course Outcomes

- Demonstrate skill in performing precise, careful, basic laboratory operations such as sample preparation, calibration techniques, spectrophotometry, electrochemical analysis, titrimetric and chromatographic methods
- Explain basic measurement methods and devices
- Show proficiency in reporting scientific results in numerical, graphical, and written formats, and be able to explain the ethical standards for such reports
- Show proficiency in using computer programs for data analysis
- Apply basic statistics to data analysis including, confidence intervals, t-test, linear regression, propagation of error, sampling statistics and signal-noise enhancement
- Critically evaluate experiments and data with respect to theory and models
- Apply knowledge to new problems, including the design and validation of new analytical methods

CHEM 285 : Introductory Bio-organic Chemistry. (4:4:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

DESCRIPTION: Principles of organic chemistry and biochemistry relating to biomolecule structure and function.

Course Outcomes

- Students will understand the metabolism of carbohydrates, lipids, and proteins in humans. They will be able to describe in structures and words the metabolism of sugars through the pathways of glycolysis, the citric acid cycle, and the electron transport chain.
- Students will understand the structure and reactivity of organic functional groups, such as alcohols, aldehydes, carboxylic acids, and amides. For example, students will learn that aldehydes and ketones typically undergo addition reactions.
- Students will understand the structure and reactivity of the biomolecules that have those functional groups. For example, students will be able to demonstrate that carbohydrates are aldehydes and ketones that undergo addition reactions to form hemiacetals and polysaccharides with acetal linkages.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes

- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

Course Outcomes

- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive

intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Chem 352 or concurrent enrollment (preferred).
DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.
NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes
- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120
DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.
NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes
- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

ECON 440 : Natural Resources and Environmental Economics. (3:3:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: ECON 380 & ECON 388
RECOMMENDED: Econ 382.
DESCRIPTION: Economic theory applied to allocation of natural resources and environmental amenities. Issues relating to externalities, common property resources, public goods, allocation of depletable natural resources over time, economic factors of environmental polarization, and others.

Course Outcomes
- Utilize economic principles and models to address private and public policy issues related to allocating natural resources and environmental amenities.Demonstrate an active understanding of the following elements of economic theory as it relates to natural resource and environmental economics:Welfare economics and concepts of Pareto optimality, efficiency, and equityThe role of property, property rights, and the bundle of rights conceptThe role of externalities, common property resources, and public goodsConcepts and measures of economic value including non-market valuation.Demonstrate a basic knowledge of the role of markets and market failure with regards to the allocation of natural resources and environmental amenities.Gain a basic understanding of the effects and relative merits of public environmental policy efforts, including cap-and-trade schemes, Pigovian taxes, regulation, and public ownership and/or management.Become knowledgeable about and be able to use economic principles and non-market valuation techniques to address a variety of continuing and contemporary natural resource and environmental issues. These issues may include, but are not exclusive to:Population growth and the environmentGlobal warmingWilderness protection and related public lands issuesAir pollution and public healthIntergenerational allocation of soil, forest, and other depleteable natural resourcesImpacts of environmental features on property values.

GEOG 101 : Global Environment: Understanding Physical Geography. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Physical environment, distribution and interrelationships of climates, landforms, ecosystems and their human significance.

Course Outcomes
There are no course outcomes available

GEOG 212 : Introduction to Geographic Information Systems. (3:2:1)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Concepts in the use of small- and large-scale digital map data, emphasizing landscape interpretation and feature description.

Course Outcomes
- Understand basic spatial concepts and data models that form the foundation of GIS.
- Acquire geospatial data from common sources and manipuate them for a specific application.
- Analyze data using GIS to solve real world problems.
- Describe several applications in which GIS is used to solve geographic problems.
- Design and use maps to explore and communicate geospatial information.

GEOG 303 : Biogeography. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Geog 101.

DESCRIPTION: Broad-scale distribution of plants and animals. Theoretical and practical applications to conservation and effects of global environmental change.

Course Outcomes
- Demonstrate an understanding of basic concepts and processes in biogeography
- Recognize and be able to explain patterns of plant and animal life at many different scales
- Explain how humans have affected the distribution and diversity of plants and animals, and apply concepts to decisions regarding human use of the environment
- Demonstrate a knowledge of prominent professional biogeographers and ecologists and their current research themes
- Plan for future changes in species distributions and diversity as a result of environmental and human-induced pressures

GEOG 305 : Geography of Landforms. (3:3:0)

WHEN TAUGHT: Fall Contact Department

RECOMMENDED: Geog 101.

DESCRIPTION: Elements of landforms: distributions and cultural significance.

Course Outcomes
- Examine the history of landform study and the key individuals in the history of geomorphology.
- Explain the physical processes that produce landforms.
- Examine a physical landscape and describe why it looks the way it does.
- Describe how human settlement and recreation patterns are influenced by landforms.
- Understand dating techniques geomorphologists use to understand earth's history.

GEOG 306 : Public Land Conservation. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Environmental and social geography of public lands; analyzing historical, planning, management, and ecological issues.

Course Outcomes
There are no course outcomes available

GEOG 307 : Landscape Ecology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Geog 101.

RECOMMENDED: Geog 212, 213.

DESCRIPTION: Interaction between spatial patterns and spatial processes in an ecological context. Methods, theories, and practical applications of landscapes at various scales.

Course Outcomes
- Demonstrate an understanding of the basic concepts of landscape ecology
- Understand the relation between pattern and process in landscapes across multiple spatial and temporal scales
- Read, understand, and critique research articles in scholarly journals related to landscape ecology
- Understand and be able to use landscape metrics and associated methodologies and technologies to quantitatively analyze landscapes
- Identify and address a research question in landscape ecology, and effectively communicate the results orally and in writing
- Apply landscape ecology concepts to environmental planning and conservation biology

GEOG 310 : Introduction to Urban and Regional Planning. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Introduction to the profession and practice of urban and regional planning.

Course Outcomes
There are no course outcomes available

GEOG 311 : Geographic Data Management. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: GEOG 212

DESCRIPTION: Nature of geographic information and its practical management in GIS; design of GIS databases, data collection from primary and secondary sources, manipulating data in preparation for analysis, and data exploration.

Course Outcomes
- Understand the fundamental concepts of geographic information, and use those concepts to explain the core data models and procedures of GIS.
- Create new databases to fulfill a specific GIS need, selecting the appropriate data model (e.g., vector or raster) and data storage strategy (e.g., shapefiles, geodatabases), and designing the necessary layers and attribute tables.
- Obtain existing GIS data that is appropriate for a given need, and transform existing data sets to fit into an enterprise GIS, using tools such as format conversion and reprojection.
- Create new GIS data sets using appropriate source materials and technologies, such as CAD, surveying, GPS, and remote sensing.
- Learn new concepts and technologies as needed to solve novel GIS management problems, with minimal supervision, using a variety of information resources.

GEOG 331 : Economic Geography. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Geog 100 or instructor's consent.

DESCRIPTION: Introduction to economic processes and spatial patterns, emphasizing theoretical approaches, locational strategies, and changing economic land-use patterns.

Course Outcomes
There are no course outcomes available

GEOG 412 : Problem Solving with Geographic Information Systems. (3:3:1)

WHEN TAUGHT: Fall Contact Department

PREREQUISITE: GEOG 212

RECOMMENDED: Geog 222.

DESCRIPTION: Solving practical geographic problems and performing scientific research using raster and vector analysis tools in GIS.

Course Outcomes
There are no course outcomes available

GEOL 101 : Introduction to Geology. (3:2:1)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Cultural focus on physical and environmental geology for nonscience majors; rocks and minerals. Field trips.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
- 1. Understand the difference between minerals and rocks.2. Be able to identify common rocks and minerals.3. Know where and when the basic rock and mineral types form and how they are related to the hydrologic and tectonic systems.
- 1. Understand how the hydrologic system helps to shape the Earth and how the different sub-systems interact.2. Learn the reasons for climate change in both ancient and modern times.
- 1. Learn the basic evidences and ideas that support the Theory of Plate Tectonics.2. Understand how the plate tectonic system works, including the role of the different types of plate boundaries and the forces that help to drive the system.3. Learn how the plate tectonic system has helped to shape the Earth's surface.
- 1. Gain a greater insight into the enormous length of geologic time and the evidences that support this claim.2. Learn the different ways that scientists can determine geologic ages.
- Learn how and why the other planets and moons in our solar system are different from Earth.

GEOL 111 : Physical Geology. (4:3:2)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Materials, structure, and surface features of the earth and the geologic processes involved in their development. Field trips and lab studies, use of aerial photos.

Course Outcomes
- 1. Learn the basic mineral types, how they form, and how they differ structurally.2. Understand how minerals are put together to form rocks.3. Learn the names and how to recognize the basic sedimentary, igneous, and metamorphic rock types.
- 1. Understand the basic atmospheric and hydrologic systems and how they affect the Earth's rocks.2. Learn how man has influenced these systems and what the possible future outcomes of this influence might be.
- 1. Learn the basic workings of the Earth's tectonic system and the evidences that support the plate tectonic theory.2. Understand how to interpret geologic structures and rocks in terms of the tectonic system.
- Learn some fundamental skills in preparation to conduct research and ultimately write research papers in other classes, including:1. Using online databases (GEOREF, Web of Science) to obtain information on a particular topic.2. Using online resources (Refworks) to manage and format references.3. Reading articles in the primary geologic literature and drawing out primary information such as the topic of and article and its conclusions even if the student is not prepared (at this stage) to understand the methodology employed.4. Appreciate the need to properly format cited literature in a research paper.5. Learn the content and proper voice for the abstract of a research paper.

1. Understand the nature of fossil fuel resources, their origin, and the magnitude of reserves of coal, oil, natural gas, etc.2. Understand the nature of metallic resources, including their origin, distribution across the globe, and the magnitude of reserves.3. Appreciate the environmental consequences of fossil fuel and metallic resource extraction.4. Become aware of the major hazards posed by earthquakes, volcanic eruptions, and their attendant phenomena.5. Understand the fundamental processes that regulate the climate, as well as the role of human activity in climate change.
- 1. Learn or review the large scale features of the Earth's interior and exterior, including the basic features of the tectonic and hydrological systems.2. Appreciate the role of heat transfer, and in particular convection, in making both the hydrosphere and tectonosphere dynamic.

GEOL 435 : Introduction to Groundwater. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: GEOL 111; or GEOL 330; Math 110 or equivalent.

DESCRIPTION: Introduction to the occurrence, movement, and properties of subsurface water; surface and groundwater relationships.

Course Outcomes
- Demonstrate knowledge of the hydrologic cycle by creating a basin-scale water budget.
- Evaluate the relationship between grain size, sorting, and hydraulic conductivity using Darcy's Law.
- Produce a potentiometric surface map and water table map for a well field.
- Evaluate the relationship between mechanical energy, hydraulic head, and force potential.
- Construct a flow net to describe groundwater flow.
- Evaluate different aquifer test methods for calculating aquifer parameters.
- Evaluate different methods for estimating groundwater recharge rates.
- Describe groundwater flow paths for confined and unconfined aquifers.
- Produce a consulting-type report that synthesizes the groundwater resources, flow paths, and aquifer characteristics of a basin.

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes
- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

MATH 119 : Introduction to Calculus. (4:4:1)

OFFERED: Independent Study only.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 and Math 111; or equivalent.

DESCRIPTION: Introduction to plane analytic geometry and calculus.

Course Outcomes
- This course is designed to provide beginning undergraduate students a first exposure to Calculus concepts, theorems, and techniques. In general, theorems will not be proved. An understanding of the theorems and their applications to solve calculus problems will be taught. Students will be expected to develop effective problem solving skills based on their understanding of the theory and not just memorize a set of routines to solve problems. For a more detailed course description, visit the Math 119 Wiki page.

MATH 302 : Mathematics for Engineering 1. (4:4:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Math 113.

DESCRIPTION: Multivariable calculus, linear algebra, and numerical methods.

Course Outcomes
- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For more detailed information, please visit the department wiki for this course at Math 302 Wiki.

MATH 303 : Mathematics for Engineering 2. (4:4:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MATH 302

DESCRIPTION: ODEs, Laplace transforms, Fourier series, PDEs.

Course Outcomes

- This course is designed to give students from the College of Engineering and Technology the mathematics background necessary to succeed in their chosen field. For a more detailed course description, visit Math 303 Wiki.

MMBIO 221 : General Microbiology. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Any biology course.
RECOMMENDED: Any chemistry course.
DESCRIPTION: Microbial world, emphasizing communicable diseases, their causes and control.
NOTE: Recommended for students seeking a liberal education in microbiology who do not have the prerequisites to take the more advanced courses.

Course Outcomes

- Explain and discuss the ways by which microbiologists study microorganisms.
- Discuss the principle infectious diseases that affect mankind, including how they are transmitted, treated, controlled and prevented.
- Differentiate between the types of microorganisms by identifying relevant structure and their function in the biosphere.
- Propose microbial solutions to global problems.
- Describe how the human body defends itself against infectious agents.

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.
DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

MMBIO 241 : Molecular and Cellular Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBio 240 or concurrent enrollment.
DESCRIPTION: Molecular and cellular biology techniques laboratory.

Course Outcomes

- Practice ethics and integrity by working with groups and following lab rules.*Relates to Program Learning Outcome: A commitment to professional integrity and ethical behavior consistent with themission of the university.
- Learn the basics of experimental design, how to formulate a hypothesis, what controls to use, how to interpret experimental data.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Practice scientific communication through written lab questions, exams and oral presentations.*Relates to Program Learning Outcome: Devise experiments with appropriate hypothesis and controls.
- Learn molecular biology laboratory techniques through practical laboratory exercises. Techniques include, spectrophotometry,isolation of DNA and protein, quantification of DNA and protein, techniques used to purify or detect specific proteins, such aschromatography, western blot and ELISA, DNA fingerprinting, polymerase chain reaction and enzyme assays.*Relates to Program Learning Outcome: Knowledge of principles and techniques of molecular and cellular biology.

PDBIO 360 : Cell Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481
DESCRIPTION: Fundamentals of cell structure and function with reference to analytical methods used by cell biologists. Practice in designing, executing, and interpreting relative experiments.

Course Outcomes

- Students will demonstrate knowledge of the molecular architecture of the nucleus, including the nuclear envelope, nucleoplasm and nucleolus, chromatin, and the nuclear pore.
- Students will demonstrate an understanding of protein transport, including nuclear import and export and vesicular transport through the secretory and sorting pathways.
- Students will demonstrate knowledge of the molecular and cellular structure and dynamics of cytoskeletal systems.
- Students will be able to apply the basic cell biological principles in outcomes 1-3 to more complicated cellular processes, including cell adhesion, cell migration, cell polarity, cell division, cancer, and development.
- Students will demonstrate the ability to generate hypothesis about how cell biological systems work at the molecular level and design experiments that test that hypothesis.
- Students will demonstrate competence in interpreting original raw data from cell biology experiments, including microscopy, protein biochemistry, molecular biology, and genetics

strategies
- Students will demonstrate the ability to critically evaluate primary cell biology literature, including the ability to evaluate the design and interpretation of experimental data.

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: High school algebra and trigonometry.
RECOMMENDED: Concurrent enrollment in Phscs 107.
DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes
There are no course outcomes available

PHSCS 106 : General Physics 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 105 or equivalent.
RECOMMENDED: Concurrent enrollment in Phscs 108.
DESCRIPTION: Continuation of Phscs 105. Electricity and magnetism, modern physics, and optics

Course Outcomes
There are no course outcomes available

PHSCS 107 : General Physics Lab 1. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Phscs 105 or concurrent enrollment.
DESCRIPTION: Lab experiments in mechanics and thermodynamics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of mechanics and thermodynamics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

PHSCS 108 : General Physics Lab 2. (1:0:3)

WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Phscs 106 or concurrent enrollment
DESCRIPTION: Lab experiments in electricity, magnetism, optics, and modern physics. Measuring and analyzing data.

Course Outcomes
- Develop a greater conceptual understanding of electricity and magnetism, optics, and modern physics through hands-on experience with physical systems that illustrate lecture course material.
- Develop skills in measuring and analyzing physical data.

Or

PHSCS 121 : Introduction to Newtonian Mechanics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Calculus or concurrent enrollment.
DESCRIPTION: Linear, circular, and projectile motion; their prediction from forces and torques. Conservation of energy and momentum. Weekly lab.

Course Outcomes
- Convert quantities from one set of units to another and use a reasonable number of significant digits when expressing answers.
- Compute a particle's classical translational motion in one or two dimensions, including circular motion, both in Cartesian coordinates and in polar coordinates.
- Use the ideas of energy, work, power, linear momentum, and angular momentum to arrive at conclusions about the motion of a system, including the motion of satellites and the planets.
- Use Newton's Second Law to calculate the motion of objects, including those in simple harmonic motion, as well as the forces and torques acting on systems in equilibrium.
- Demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strenghts and weaknesses of this process

PHSCS 123 : Introduction to Waves, Optics, and Thermodynamics. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Phscs 121 or equivalent. Calculus.
DESCRIPTION: Waves, thermal physics, optics, special relativity, and introduction to modern physics. Weekly lab.

Course Outcomes
- Solve problems and answer conceptual questions using the basics of fluid statics and dynamics, including Bernoulli's principle and Pascal's law.
- Answer conceptual questions and calculate changes in temperature, pressure, entropy and

volume for quasistatic ideal gas processes and be able to determine work done and efficiency for gas engines, heat pumps, and refrigerators. Determine heat flow and temperatures in systems in steady state.
- Solve problems and answer conceptual questions involving waves, using concepts such as wave speed, wavelength, frequency, superposition, beats, and resonance. Solve wave interference problems.
- Find the location and magnification of images in single- and multiple-lens/mirror systems by calculation and by ray tracing, and be able to work general problems in optics using Snell's law and specular reflection.
- (Section 1) Solve problems and answer conceptual questions in basic modern physics including special relativity, and quantum mechanics and nuclear physics.
- (Section 2) Solve more advanced problems and answer conceptual questions in wave analysis, including calculating group and phases velocities, solving for Fourier coefficients of periodic functions, and frequencies of notes in the equal temperament musical scale. Solve problems in special relativity.

PHIL 205 : Introduction to Formal Logic. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: History and use of syllogistic and propositional logic; evaluating arguments with Venn diagrams, truth tables, and Copi-style proofs and proof strategies; informal reasoning and fallacies.

Course Outcomes
- Know the basic vocabulary and concepts of formal and informal logic.
- Learn how to appraise validity by refuting invalid arguments and by constructing formal proofs for valid ones.
- Learn how to translate ordinary language into logical symbolism.

PWS 100 : Living with Plants. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Introduction to principles of plant function and diversity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
- Demonstrate a fundamental knowledge of basic principles and concepts of plant biology (i.e., structure, function, and diversity)
- Cultivate an appreciation for the central importance of plants in the way our world and human society functions
- Provide a conceptual framework of how plants influence the environment
- Practice using the scientific method to better understand plant-environment interactions
- Improve verbal and written communication

PWS 103 : Residential Landscape Design. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Design and composition as applied to development of residential grounds.

Course Outcomes
- Design residential landscapes that are both funtional and beautiful
- Make better decisions when purchasing plants and landscape construction materials
- Discuss issues and challenges dealing with landscape planning and maintenance.
- Enjoy nature more
- Explain professional opportunities related to landscape design.

PWS 215 : Principles of Range Management. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Overview of rangeland resources and management principles, including rangeland classification, multiple use management, natural resource policy, and grazing management.

Course Outcomes
- Describe rangeland physical characteristics, types, physiology, and ecology
- To understand the principles of stewardship and how they apply to Rangelands
- To understand the importance of rangeland grazing, how it is managed, and nutrient needs of livestock and wildlife
- Describe multiple use management and its implications to wildlife and livestock
- To improve reading and writing skills relating to scientific research

PWS 225 : Principles of Wildlife and Fisheries Management. (3:3:0)

WHEN TAUGHT: Winter

RECOMMENDED: PWS 115.

DESCRIPTION: Basic principles of fish and wildlife management, their habitats, and their human users. Ecological concepts, population dynamics, nutrition, behavior, population assessment, management strategies, habitat sampling and management.

Course Outcomes
- Learning Outcome #1: Identify and articulate stewardship for the creation as a basis for professional judgment.This course not only provides an understanding of tools used by wildlife and fisheries managers to restore, revive, and maintain wildlife and fish populations, but also discusses our stewardship roles and responsibilities for those aspects of the creation.

- Learning Outcome #2: Identify wildland plants, soils, and wildlife species and understand how they function in the environment.This course introduces students to a number of wildlife and fish species, and basic ecological concepts as they relate to wildlife and fisheries. Students will understand the ecological roles, habitat needs, and interactions of fish and wildlife at various levels in an ecosystem
- Learning Outcome #3: Apply an understanding of ecological processes to wildlife management.This course includes an extensive overview of basic ecological processes and how to use them for fish and wildlife management.
- Learning Outcome #4: Demonstrate the ability to apply the scientific method and analytical thinking to ecological and management issues.In this course students will be rigorously taught the scientific method and given opportunities to demonstrate the understanding through fish and wildlife management problem solving. They will have writing assignments that provide opportunities for the synthesis and expression of the depth of their understanding. The term paper required in this course may be used for one of the "three written papers relating to stewardship ethics and management situations" that will be placed in the student's portfolio required for graduation with a Wildlife and Wildlands Conservation BS degree.

PWS 288 : Mentored Laboratory Techniques. (2:.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105

DESCRIPTION: Mentored, systematic instruction in basic biotechnology techniques and their application in addressing molecular genetic research questions.

Course Outcomes
There are no course outcomes available

PWS 303 : Soils Conservation and Resources. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 282 & CHEM 105; or PWS 282 & CHEM 101; PWS 100 or equivalent; Math 110 or equivalent.

RECOMMENDED: Geol 111.

DESCRIPTION: Taxonomy of world soils; conservation and management of agricultural, wildland, wetland, and urban soils.

Course Outcomes
- Understand soil physics, chemistry, taxonomy, and water movement to maintain natural resources.
- Apply soil conservation practices and principles to regions sensitive to soil degradation.
- Understand the history, development, and terminology associated with USDA Soil Taxonomy and be familiar with other soil taxonomic systems. Recognize soil orders and suborders from the physical and chemical characteristics of the soil

PWS 306 : Soil Fertility and Plant Nutrition Laboratory. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 305 or concurrent enrollment.

DESCRIPTION: Laboratory for studying nutrient-supplying power of soils, nutrient deficiencies and toxicities, and plant adaptation to nutritional stresses.

Course Outcomes
- Gain a fundamental understanding of the investigative techniques necessary to solve problems associated with water and soil resources and management
- Understand the basic diagnostic steps to test water and soil quality
- Improve mathematical and statistical skills related to nutrient, salinity, sodicity, and toxicity evaluation and management

PWS 330 : Rangeland Plant Identification and Ecology. (3:2:3)

WHEN TAUGHT: Winter

DESCRIPTION: Identification, characteristics, phenology, distribution, site adaptation, forage value, and response to management of significant range and pasture plants.

Course Outcomes
- Students will be able to sight identify many common range plants of North America
- Students will be able to use a grass key to identify unknown grasses
- Students will be able to pair symptoms of sick animals with poisonous plants that may have been consumed

PWS 331 : Science of Plant Pest Control. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Management of plant health problems, namely weed, insect, and disease, through integrated pest management and proper pesticide management and safety.

Course Outcomes
- Enhance critical thinking skills.
- Develop a framework for decision-making and implementation in applied pest management and ecology.
- Recommend control options for plant pest management.
- Safely and accurately apply plant pesticides in urban and agricultural environments.
- Identify various plant pest control measures.

- Improve communication and interpersonal skills.

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes

- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

PWS 355 : Rangeland Vegetation Measurements and Analysis. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Field methodologies for vegetation inventories and analysis (density, biomass, cover, frequency, utilization, etc.) in wildland settings.

Course Outcomes

- Students will be able to demonstrate, through lab exercises and write-ups, an understanding of ecological processes that drive secondary succession in wildland ecosystems which in turn impact management decisions.
- Students will be able to apply vegetation data collection techniques to quantify vegetation and make interpretations used in resource management decisions.

PWS 390R : Special Topics in Plant and Wildlife Sciences. (1-3:Arr.:Arr.)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Current topics in plant and wildlife sciences.

Course Outcomes

- Students will gain knowledge from specialized instruction in focused area

PWS 402 : Urban Soils and Water. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 100 & PWS 282.

DESCRIPTION: Principles of water management, soil physics, and soil fertility used in a problem-solving environment addressing current challenges in managing soils and water in the urban landscape.

Course Outcomes

- Students will apply concepts assimilated in previous courses to solve problems associated with at least five real world case studies. By assignment, eachwill develop an assessment matrix for use in problem solving situations encountered in their future careers.
- A primary goal of this course is for students to greatly increase their knowledge base of scientific principles related to plant, water, soil, nutrient, and pest management. This will be assessed by examination at beginning and end of semester with a target of at least doubling of average scores.
- Students will successfully writeseveral documents, including a research paper and diagnostic key at an upperclassmen level of writing. Students will actively participate in team problem solving and a Group presentation.
- Students will develop at least one individual and group item to add to their portfolio. Development of a diagnostic key, writing an evaluation paper, development of a group presentation and completion of a semester project could each contribute to portfolios.

PWS 405 : Environmental Chemistry Lab 1. (1:0:2)

WHEN TAUGHT: Fall

PREREQUISITE: Chem 105, 106, 107; or equivalent.

RECOMMENDED: Chem 223; PWS 283, 306.

DESCRIPTION: Soil, water, biosolid, and biotic tissue sample preparation and analysis using chromatography, combustion, and spectroscopy.

Course Outcomes

There are no course outcomes available

PWS 406 : Environmental Chemistry Lab 2. (1:0:2)

WHEN TAUGHT: Winter

PREREQUISITE: Chem 105, 106, 107; or equivalent.

RECOMMENDED: Chem 223; PWS 283, 306.

DESCRIPTION: Soil, water, biosolid, and biotic tissue sample preparation and analysis using ICP-AES and AAS instrumentation.

Course Outcomes
There are no course outcomes available

PWS 411 : Watershed Management. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: BIO 350; or PWS 350

DESCRIPTION: Processes and management of the hydrologic cycle of forests and rangelands.

Course Outcomes
- Students will understand the history and policy that drives water management in the western US.
- Students will understand ecological and hydrological processes and concepts and apply them to watershed management actions such as harvesting, grazing, and restoration.
- Students will be able to apply assessment and classification tools to watersheds and their components to determine how management actions affect hydrologic responses.

PWS 416 : Rangeland Vegetation Improvement. (3:2:3)

WHEN TAUGHT: Fall

RECOMMENDED: PWS 330, 350.

DESCRIPTION: Habitat improvement for domestic and wild animals. Plant control by mechanical equipment, herbicides, and prescribed fire. Restoration of disturbed lands.

NOTE: Field trips required.

Course Outcomes
- Apply the historical and successional history of land to current rangeland vegetation conditions and treatments
- Describe and plan biological, chemical, mechanical methods, and fire to achieve land management goals.
- Assess site potential and fuels relative to potential vegetation changes with and without management.
- Apply and plan revegetation, fire rehabilitation, and restoration practices to rangelands.
- Integrate plant control, revegetation and other restoration practices to meet land management goals
- Become familiar with approaches, practices, and outcomes of rangeland vegetation improvements in actual field situations.

PWS 419 : Forest Management and Ecology. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Managing forests, emphasizing ecosystem managment.

NOTE: Field trips required.

Course Outcomes
- 1. Articulate their role as stewards over forested environments.
- 2. Appreciate the diversity of forests world-wide and their importance to human populations.
- 3. Apply knowledge of forest structure, function, and process in making management decisions
- 4. Be able to quantify forest structure and production
- 5. Recognize forest pests and diseases and know appropriate control techniques.
- 6. Relate forests to wildlife habitat
- 7. Identify 75 tree species located in Utah and on BYU campus.

PWS 491R : Undergraduate Seminar. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Current information in the plant and wildlife sciences.

Course Outcomes
- Explain the importance of cross-discipline research for comprehensive scholarship and the importance of Gospel-centered stewardship and sustainability.
- Display fluency in the vocabulary and current research techniques in the four focal areas of the PWS Department: environmental science; genetics and biotechnology; landscape management; and wildlife and wildlands conservation

PWS 511 : Environmental Biophysics: Soil and Plant Water Relations. (4:3:2)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Phscs 105 and PWS 282; or equivalents.

DESCRIPTION: Integrating biological, physical, and chemical processes of water and solute movements through the soil-plant-atmosphere continuum.

Course Outcomes
- Students will take a pre- and post-semester exam and at least double their score to assess understanding of the importance of physics in biological systems.

PWS 514 : Soil Microbiology. (2:2:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: Chem 105 and 106; or equivalents.

DESCRIPTION: Ecology and role of soil microorganisms in biogeochemical cycles, decomposition of organic matter and waste materials, and bioremediation of contaminated soils and water.

Course Outcomes

- Ecology and role of soil microorganisms in nutrient cycling, decomposition of organic matter and waste materials, and degradation of agricultural chemicals in soils

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

*Hours include courses that may fulfill university core requirements.

Program Requirements | View MAP

1. Complete the following:

PWS 103 : Residential Landscape Design. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Design and composition as applied to development of residential grounds.

Course Outcomes
- Design residential landscapes that are both funtional and beautiful
- Make better decisions when purchasing plants and landscape construction materials
- Discuss issues and challenges dealing with landscape planning and maintenance.
- Enjoy nature more
- Explain professional opportunities related to landscape design.

PWS 214 : Landscape Bidding and Estimating. (2:2:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 103; Math 110 or equivalent.

DESCRIPTION: Competitive bidding strategies, quantity takeoffs, bid analyses for landscape construction and maintenance.

Course Outcomes
- Understand the different players in the landscape industry and how they interact with each other.
- Discuss and understand basic construction law and landscape construction and maintenance contracts.
- Create and accurately figure estimates for both landscape construction and landscape maintenance projects.
- Understand cost accounting and cash flow accounting for business.
- Be able to use a planimeter and other measuring instruments for estimating purposes.

PWS 282 : Introduction to Soil Science. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 283 or concurrent enrollment.

DESCRIPTION: Physical, chemical and microbiological properties of soils that affect plant growth in natural, agricultural, and urban environments.

Course Outcomes
- Enhance critically thinking skills as they apply to soil resource management and conservation
- Demonstrate a fundamental knowledge of soil chemistry, genesis, microbiology, physics, taxonomy, and nutrient and water relations
- Create a conceptual framework to help manage soil resources (i.e., animal habitat, plant nutrient fertility, salinity, soil and water quality, and wind and water erosion) in agricultural, urban, and ecological settings
- Understand the historical and current problems, and cultural concerns facing soils as a natural resource essential to human life

PWS 391 : Careers in Landscape Management. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: Current information on internships, career options, and employment preparation skills in the landscape management/green industry.

Course Outcomes
There are no course outcomes available

2. Complete one course from the following:

PWS 198R : BYU Grounds Practicum. (.5:0:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Instructor's consent; concurrent employment with BYU Grounds Department.

DESCRIPTION: Multiple horticulture experiences through collaboration with BYU Grounds.

Course Outcomes
- To provide a practical outside of the classroom experience for students
- To introduce students to a diverse range of practical skills and on the job training.
- To expose students to the different aspects of the Green Industry through on campus grounds experience.
- To strengthen the relationship between the Landscape Management Program and the Grounds department on campus.
- To make campus part of the learning laboratory.

PWS 199R : Academic Internship. (.5-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Consent of both department chair and internship coordinator.

DESCRIPTION: Work experience evaluated by supervisor and posted on student's transcript.

Course Outcomes
- Students will find an entry level internship position with a high quality company and receive above average ratings from the employer.

3. After consulting with a faculty advisor, complete 8 hours from the following:

Design

PWS 105 : Landscape Design Graphics. (2:2:0)

WHEN TAUGHT: Winter; Spring

PREREQUISITE: PWS 103

DESCRIPTION: Communication through descriptive drawing and professional plan graphics: plan views, elevation, color, and computer-aided design.

Course Outcomes
- Feel comfortable and confident with the different methods of drawing as they relate to landscape design
- Have a clear and developed drawing style
- Be able to produce drawings using graphics that clearly communicate and portray the design intent.
- Develop drawing techniques that allow for quick design and those that allow for more professional design.

PWS 112 : Floral Design. (3:2:2)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: History and principles of floral design; identification, care, and handling of cut flowers; techniques of arranging flowers and other plant materials for home and professional use.

NOTE: Fee. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
- Students will take a pre- and post-test for foundational principles related to floral design and will show learning by an increase of at least double the average score.
- Students will learn how to build various floral arrangements and will successfully complete one design per week.

PWS 213 : Interior Plants and Landscapes. (2:2:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Identification and culture of plants used in the interior landscape industry; applying principles of design to the placement and use in interior landscapes.

Course Outcomes
- Students will take a pre- and post-test for foundational principles related to this course and will show learning by an increase of at least double the average score.
- Students will complete a class project that involves the use of foundation principles in this course and use this written project for their portfolio.

PWS 380 : Plant Community Design. (2:2:0)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 103 & PWS 105 & BIO 235

DESCRIPTION: Design and ecology of thematic plant communities.

Course Outcomes
- Design a variety of landscapes and gardens with different contextual variables.
- Select plants, appropriate for a given design, based on correct horticultural and ecological knowledge (plant justification)
- Design better, design faster
- Further develop critiquing skills
- Prepare a landscape design portfolio for client interviews or graduate school applications.

Installation

PWS 211 : Landscape Structures. (2:2:0)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 103

DESCRIPTION: Theory and mechanics of hardscape design and construction.

Course Outcomes

- To apply basic knowledge of common hardscape, irrigation, and similar materials learned in the landscape structures course.
- To be able to implement (construct) certain elements of landscape construction.
- To know how to think creatively and conceptually of a landscape design and be able to translate that into a construction document.

PWS 212 : Landscape Laboratory. (1:0:2)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 211 or concurrent enrollment.

DESCRIPTION: Working methods of the landscape industry: irrigation, equipment, and materials.

Course Outcomes

- To apply basic knowledge of common hardscape, irrigation, and similar materials learned in the landscape structures course.
- To be able to implement (construct) certain elements of landscape construction.
- To know how to think creatively and conceptually of a landscape design and be able to translate that into a construction document.

PWS 283 : Introduction to Soil Science Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 282 or concurrent enrollment.

DESCRIPTION: Laboratory techniques in determining soil physical, chemical, and fertility properties.

Course Outcomes

- Understand basic soil assessments related to soil chemistry, physics, biology, and nutrient fertility
- Apply laboratory techniques to determine problems associated with soil resource conservation and management
- Conduct basic soil methods in nutrient analysis; textural classification; and organic matter, cation exchange capacity, acidity, and alkalinity content

PWS 319 : Turf Science. (3:2:2)

WHEN TAUGHT: Fall

DESCRIPTION: Design, installation, and management of agricultural and urban turfgrass systems. Physiological and soil interaction principles of turfgrass management.

Course Outcomes

- Students will become compentant enough to pass a mock up of the Turfgrass Certification exam patterned after the industry standard.
- Students will be given a pre- and post-class attitude survey to access their understanding and appreciation of the importance of turfgrass in terms of aesthetics, environmental quality, and athlete/child safety with a goal of the score doubling (on average) at the end of semester.
- Students will conduct a research project to the point of having a written manuscript that is in draft form in order to show them the possibility of doing a graduate program. Also, students will write a short paper on how turfgrass science is important in their anticipated field of choice.

PWS 320 : Arboriculture. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 100 & PWS 282

RECOMMENDED: Bio 235.

DESCRIPTION: Biology and culture of woody plants for use in urban landscapes.

Course Outcomes

- Understand fundamental concepts dealing with the ecology, biology and culture of woody landscape plants
- become deeply interested in trees

Maintenance

PWS 210 : Herbaceous Plants. (2:2:0)

WHEN TAUGHT: Fall

DESCRIPTION: Identification and landscape use of flowers and groundcovers.

Course Outcomes

- Students will take a pre- and post-test for foundational principles related to growth of herbaceous plants and will show learning by an increase of at least double the average score.
- Students will complete a class project that involves the use of foundation principles in this course and use this written project for their portfolio.

PWS 283 : Introduction to Soil Science Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 282 or concurrent enrollment.

DESCRIPTION: Laboratory techniques in determining soil physical, chemical, and fertility properties.

Course Outcomes
- Understand basic soil assessments related to soil chemistry, physics, biology, and nutrient fertility
- Apply laboratory techniques to determine problems associated with soil resource conservation and management
- Conduct basic soil methods in nutrient analysis; textural classification; and organic matter, cation exchange capacity, acidity, and alkalinity content

PWS 319 : Turf Science. (3:2:2)

WHEN TAUGHT: Fall

DESCRIPTION: Design, installation, and management of agricultural and urban turfgrass systems. Physiological and soil interaction principles of turfgrass management.

Course Outcomes
- Students will become compentant enough to pass a mock up of the Turfgrass Certification exam patterned after the industry standard.
- Students will be given a pre- and post-class attitude survey to access their understanding and appreciation of the importance of turfgrass in terms of aesthetics, environmental quality, and athlete/child safety with a goal of the score doubling (on average) at the end of semester.
- Students will conduct a research project to the point of having a written manuscript that is in draft form in order to show them the possibility of doing a graduate program. Also, students will write a short paper on how turfgrass science is important in their anticipated field of choice.

PWS 320 : Arboriculture. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 100 & PWS 282

RECOMMENDED: Bio 235.

DESCRIPTION: Biology and culture of woody plants for use in urban landscapes.

Course Outcomes
- Understand fundamental concepts dealing with the ecology, biology and culture of woody landscape plants
- become deeply interested in trees

PWS 431 : Plant Health Diagnostics. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Diagnosing plant health problems; pest biology and identification (weed, insect, and disease).

Course Outcomes
There are no course outcomes available

Note 1: Electives need not be taken from the same emphasis to fill this requirement.

Note 2: PWS 100 will substitute for 3 hours under the elective requirement.

*Hours include courses that may fulfill university core requirements.

Undergraduate Courses

100-Level Courses

PWS 100 : Living with Plants. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Introduction to principles of plant function and diversity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

- Demonstrate a fundamental knowledge of basic principles and concepts of plant biology (i.e., structure, function, and diversity)
- Cultivate an appreciation for the central importance of plants in the way our world and human society functions
- Provide a conceptual framework of how plants influence the environment
- Practice using the scientific method to better understand plant-environment interactions
- Improve verbal and written communication

PWS 101 : Cultural History of Medicinal Plants. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: A global perspective of how medicinal plants have shaped cultural history and how they are used to treat illness and disease. Issues relating to conservation, natural history, biodiversity, and cultural diversity.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

- 1. Explain and interpret a global history of how indigenous people can use plants to treat illnesses and disease.2. Understand and explain the differences between injurious, remedial, and psychoactive plants.3. Explain the difference between the Western philosophy of traditional medicine and local indigenous practices for treating illnesses and disease.4. Analyze and interpret a dose response curve.5. Define and explain the meaning of an LD-50 and LC-50.6. Diagram the history behind commercially available cancer chemotherapeutic drugs that are of plant origin, including the drug name, species of plant it was extracted from, acute and delayed toxicity, and major contraindications.7. Explain the limitations and myths associated with the herbal industry.8. Read and interpret peer reviewed literature on studies designed to show how human health has improved by using herbal remedies.9. Explain why it is important to preserve and protect sensitive habitat such as the tropical rainforests, which contain a wealth of biological information related to future drugs as yet undiscovered.10. Analyze the differences and similarities of how cultures of the world treat illnesses and disease

PWS 103 : Residential Landscape Design. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Design and composition as applied to development of residential grounds.

Course Outcomes

- Design residential landscapes that are both funtional and beautiful
- Make better decisions when purchasing plants and landscape construction materials
- Discuss issues and challenges dealing with landscape planning and maintenance.
- Enjoy nature more
- Explain professional opportunities related to landscape design.

PWS 105 : Landscape Design Graphics. (2:2:0)

WHEN TAUGHT: Winter; Spring

PREREQUISITE: PWS 103

DESCRIPTION: Communication through descriptive drawing and professional plan graphics: plan views, elevation, color, and computer-aided design.

Course Outcomes

- Feel comfortable and confident with the different methods of drawing as they relate to landscape design
- Have a clear and developed drawing style
- Be able to produce drawings using graphics that clearly communicate and portray the design intent.
- Develop drawing techniques that allow for quick design and those that allow for more professional design.

PWS 112 : Floral Design. (3:2:2)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: History and principles of floral design; identification, care, and handling of cut flowers; techniques of arranging flowers and other plant materials for home and professional use.

NOTE: Fee. This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
- Students will take a pre- and post-test for foundational principles related to floral design and will show learning by an increase of at least double the average score.
- Students will learn how to build various floral arrangements and will successfully complete one design per week.

PWS 115 : Introduction to Wildlife and Wildlands Conservation. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: Assisting students in choosing individual professions and curricula.

Course Outcomes
- Student will be able to make an informed decision on majoring in Wildlife and Wildlands Conservation based on career opportunities and course work required to qualify for career positions.
- Students will be able to articulate stewardship responsibilities of managers to represent multiple uses of resources by multiple users with divergent opinions and perspectives.

PWS 150 : Environmental Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

DESCRIPTION: Conservation and management of natural resources concurrent with increasing socioeconomic and human population demands; factors such as soil, water, and air pollution, resources management, bioremediation, nutrient cycles, and global climate changes

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
- Gain a deep appreciation for the Lord's admonition to Adam and Eve regarding the Earth to dress it and keep it
- Engage others and participate in discussions about major environmental problems, movements, and solutions (e.g., desertification, invasive species, water pollution, green revolution, and renewable energy).
- Understand how “science” is conducted.
- Demonstrate a fundamental knowledge (i.e., scientific literacy) of the environment and current environmental problems facing us locally, regionally, and globally.
- Devise experiments with testable hypotheses based the scientific method—process of making observations and logically integrating those observations into a model of how the world works.
- Foster and promote environmental stewardship within your realm of influence and your community.

PWS 155 : Careers in Environmental Science. (1:1:0)

WHEN TAUGHT: Fall

Course Outcomes
There are no course outcomes available

PWS 188 : Introduction to Genetics and Biotechnology. (2:2:0)

WHEN TAUGHT: Winter

RECOMMENDED: PDBio 120 or concurrent enrollment.

DESCRIPTION: Orientation to the genetics and biotechnology major and introduction to the scientific field, including undergraduate mentored research, internships, extracurricular activities, professional careers, scientific literature, and applications of biotechnology in biomedicine, plant and animal improvement, and environmental remediation. Developing fluency in primary vocabulary of the discipline, familiarization with key technologies, writing reviews of primary literature and portfolio establishment, experiencing basic laboratory protocols.

Course Outcomes
- Students can understand and discuss basic concepts underlying genetics, biotechnology, and genomics.
- Students can explain basic operations and applications of existing and emerging technologies for applied genomics.
- Students can readily access primary literature in the discipline and draw upon these sources to compose appropriately formatted literature reviews.
- Students can identify and apply for undergraduate educational research opportunities (BYU mentored research and external internships).
- Students can describe a broad range of careers for geneticists and biotechnologists.

PWS 191 : Introduction to Landscape Management. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: Introduction to the landscape management competency matrix and portfolio. Overview of professional opportunities presented by faculty and industry professionals.

Course Outcomes
- Understand the opportunities for learning and growth that are available in the landscape contracting profession
- identify and evaluate professional areas in which to pursue excellence
- Maximize your potential for professional success

PWS 198R : BYU Grounds Practicum. (.5:0:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Instructor's consent; concurrent employment with BYU Grounds Department.
DESCRIPTION: Multiple horticulture experiences through collaboration with BYU Grounds.

Course Outcomes
- To provide a practical outside of the classroom experience for students
- To introduce students to a diverse range of practical skills and on the job training.
- To expose students to the different aspects of the Green Industry through on campus grounds experience.
- To strengthen the relationship between the Landscape Management Program and the Grounds department on campus.
- To make campus part of the learning laboratory.

PWS 199R : Academic Internship. (.5-3:ARR:ARR)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Consent of both department chair and internship coordinator.
DESCRIPTION: Work experience evaluated by supervisor and posted on student's transcript.

Course Outcomes
- Students will find an entry level internship position with a high quality company and receive above average ratings from the employer.

200-Level Courses

PWS 210 : Herbaceous Plants. (2:2:0)
WHEN TAUGHT: Fall
DESCRIPTION: Identification and landscape use of flowers and groundcovers.

Course Outcomes
- Students will take a pre- and post-test for foundational principles related to growth of herbaceous plants and will show learning by an increase of at least double the average score.
- Students will complete a class project that involves the use of foundation principles in this course and use this written project for their portfolio.

PWS 211 : Landscape Structures. (2:2:0)
WHEN TAUGHT: Fall
PREREQUISITE: PWS 103
DESCRIPTION: Theory and mechanics of hardscape design and construction.

Course Outcomes
- To apply basic knowledge of common hardscape, irrigation, and similar materials learned in the landscape structures course.
- To be able to implement (construct) certain elements of landscape construction.
- To know how to think creatively and conceptually of a landscape design and be able to translate that into a construction document.

PWS 212 : Landscape Laboratory. (1:0:2)
WHEN TAUGHT: Fall
PREREQUISITE: PWS 211 or concurrent enrollment.
DESCRIPTION: Working methods of the landscape industry: irrigation, equipment, and materials.

Course Outcomes
- To apply basic knowledge of common hardscape, irrigation, and similar materials learned in the landscape structures course.
- To be able to implement (construct) certain elements of landscape construction.
- To know how to think creatively and conceptually of a landscape design and be able to translate that into a construction document.

PWS 213 : Interior Plants and Landscapes. (2:2:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Identification and culture of plants used in the interior landscape industry; applying principles of design to the placement and use in interior landscapes.

Course Outcomes
- Students will take a pre- and post-test for foundational principles related to this course and will show learning by an increase of at least double the average score.
- Students will complete a class project that involves the use of foundation principles in this course and use this written project for their portfolio.

PWS 214 : Landscape Bidding and Estimating. (2:2:0)
WHEN TAUGHT: Winter
PREREQUISITE: PWS 103; Math 110 or equivalent.
DESCRIPTION: Competitive bidding strategies, quantity takeoffs, bid analyses for landscape construction and maintenance.

Course Outcomes
- Understand the different players in the landscape industry and how they interact with each other.
- Discuss and understand basic construction law and landscape construction and maintenance contracts.
- Create and accurately figure estimates for both landscape construction and landscape maintenance projects.
- Understand cost accounting and cash flow accounting for business.

- Be able to use a planimeter and other measuring instruments for estimating purposes.

PWS 215 : Principles of Range Management. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Overview of rangeland resources and management principles, including rangeland classification, multiple use management, natural resource policy, and grazing management.

Course Outcomes

- Describe rangeland physical characteristics, types, physiology, and ecology
- To understand the principles of stewardship and how they apply to Rangelands
- To understand the importance of rangeland grazing, how it is managed, and nutrient needs of livestock and wildlife
- Describe multiple use management and its implications to wildlife and livestock
- To improve reading and writing skills relating to scientific research

PWS 225 : Principles of Wildlife and Fisheries Management. (3:3:0)

WHEN TAUGHT: Winter

RECOMMENDED: PWS 115.

DESCRIPTION: Basic principles of fish and wildlife management, their habitats, and their human users. Ecological concepts, population dynamics, nutrition, behavior, population assessment, management strategies, habitat sampling and management.

Course Outcomes

- Learning Outcome #1: Identify and articulate stewardship for the creation as a basis for professional judgment.This course not only provides an understanding of tools used by wildlife and fisheries managers to restore, revive, and maintain wildlife and fish populations, but also discusses our stewardship roles and responsibilities for those aspects of the creation.
- Learning Outcome #2: Identify wildland plants, soils, and wildlife species and understand how they function in the environment.This course introduces students to a number of wildlife and fish species, and basic ecological concepts as they relate to wildlife and fisheries. Students will understand the ecological roles, habitat needs, and interactions of fish and wildlife at various levels in an ecosystem
- Learning Outcome #3: Apply an understanding of ecological processes to wildlife management.This course includes an extensive overview of basic ecological processes and how to use them for fish and wildlife management.
- Learning Outcome #4: Demonstrate the ability to apply the scientific method and analytical thinking to ecological and management issues.In this course students will be rigorously taught the scientific method and given opportunities to demonstrate the understanding through fish and wildlife management problem solving. They will have writing assignments that provide opportunities for the synthesis and expression of the depth of their understanding. The term paper required in this course may be used for one of the “three written papers relating to stewardship ethics and management situations” that will be placed in the student’s portfolio required for graduation with a Wildlife and Wildlands Conservation BS degree.

PWS 270 : Animal Husbandry. (3:2:3)

WHEN TAUGHT: Winter

DESCRIPTION: Introduction to animal husbandry and management techniques for domestic and wild animals.

Course Outcomes

- Integrate livestock husbandry and management practices with wildlife management.
- Learn important aspects of livestock stewardship through daily care and management.
- Understand how livestock production can and will impact wildlife ecology.

PWS 275 : Genetics and Reproduction. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Any general biology course.

DESCRIPTION: Principles of inheritance.

Course Outcomes

- Identify and articulate principles of stewardship as a basis for professional judgment.
- Apply knowledge of genetics to conservation and management of natural populations.
- Provide a foundation in the basic and applied principles of genetics for natural resource management andconservation.

PWS 282 : Introduction to Soil Science. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 283 or concurrent enrollment.

DESCRIPTION: Physical, chemical and microbiological properties of soils that affect plant growth in natural, agricultural, and urban environments.

Course Outcomes

- Enhance critically thinking skills as they apply to soil resource management and conservation
- Demonstrate a fundamental knowledge of soil chemistry, genesis, microbiology, physics, taxonomy, and nutrient and water relations
- Create a conceptual framework to help manage soil resources (i.e., animal habitat, plant nutrient fertility, salinity, soil and water quality, and wind and water erosion) in agricultural, urban, and ecological settings
- Understand the historical and current problems, and cultural concerns facing soils as a natural resource essential to human life

PWS 283 : Introduction to Soil Science Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 282 or concurrent enrollment.

DESCRIPTION: Laboratory techniques in determining soil physical, chemical, and fertility properties.

Course Outcomes

- Understand basic soil assessments related to soil chemistry, physics, biology, and nutrient fertility
- Apply laboratory techniques to determine problems associated with soil resource conservation and management
- Conduct basic soil methods in nutrient analysis; textural classification; and organic matter, cation exchange capacity, acidity, and alkalinity content

PWS 288 : Mentored Laboratory Techniques. (2:.5:1.5)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105

DESCRIPTION: Mentored, systematic instruction in basic biotechnology techniques and their application in addressing molecular genetic research questions.

Course Outcomes

There are no course outcomes available

300-Level Courses

PWS 301 : Plant Growth and Reproduction. (3:2:2)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 100 or equivalent.

DESCRIPTION: Scientific principles of plant propagation by seeds, cuttings, budding and grafting, and tissue culture.

Course Outcomes

- Students will take a pre- and post-test for foundational principles related to this course and will show learning by an increase of at least double the average score.
- Students will complete a class project that involves the use of foundation principles in this course and use this written project for their portfolio.

PWS 303 : Soils Conservation and Resources. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 282 & CHEM 105; or PWS 282 & CHEM 101; PWS 100 or equivalent; Math 110 or equivalent.

RECOMMENDED: Geol 111.

DESCRIPTION: Taxonomy of world soils; conservation and management of agricultural, wildland, wetland, and urban soils.

Course Outcomes

- Understand soil physics, chemistry, taxonomy, and water movement to maintain natural resources.
- Apply soil conservation practices and principles to regions sensitive to soil degradation.
- Understand the history, development, and terminology associated with USDA Soil Taxonomy and be familiar with other soil taxonomic systems. Recognize soil orders and suborders from the physical and chemical characteristics of the soil

PWS 305 : Soils and Water Quality. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 282 & CHEM 105; or PWS 282 & CHEM 101; PWS 100 or equivalent; Math 110 or equivalent.

DESCRIPTION: Principles and practices of safe management of agricultural and urban wastes; amendments and nutrients including remediation methods for conservation of soils and water quality.

Course Outcomes

- Evaluate case studies in current topics soil and water quality
- Demonstrate a fundamental knowledge in water quality and water resource conservation as influenced by soil-water-atmosphere interactions
- Enhance critically thinking skills as it relates to issues in water quality management and resource conservation
- Improve mathematical and statistical skills related to nutrient, salinity, sodicity, and toxicity evaluation and management

PWS 306 : Soil Fertility and Plant Nutrition Laboratory. (1:0:3)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 305 or concurrent enrollment.

DESCRIPTION: Laboratory for studying nutrient-supplying power of soils, nutrient deficiencies and toxicities, and plant adaptation to nutritional stresses.

Course Outcomes

- Gain a fundamental understanding of the investigative techniques necessary to solve problems associated with water and soil resources and management
- Understand the basic diagnostic steps to test water and soil quality
- Improve mathematical and statistical skills related to nutrient, salinity, sodicity, and toxicity evaluation and management

PWS 319 : Turf Science. (3:2:2)

WHEN TAUGHT: Fall

DESCRIPTION: Design, installation, and management of agricultural and urban turfgrass systems. Physiological and soil interaction

principles of turfgrass management.

Course Outcomes
- Students will become compentant enough to pass a mock up of the Turfgrass Certification exam patterned after the industry standard.
- Students will be given a pre- and post-class attitude survey to access their understanding and appreciation of the importance of turfgrass in terms of aesthetics, environmental quality, and athlete/child safety with a goal of the score doubling (on average) at the end of semester.
- Students will conduct a research project to the point of having a written manuscript that is in draft form in order to show them the possibility of doing a graduate program. Also, students will write a short paper on how turfgrass science is important in their anticipated field of choice.

PWS 320 : Arboriculture. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: PWS 100 & PWS 282
RECOMMENDED: Bio 235.
DESCRIPTION: Biology and culture of woody plants for use in urban landscapes.

Course Outcomes
- Understand fundamental concepts dealing with the ecology, biology and culture of woody landscape plants
- become deeply interested in trees

PWS 325 : Fisheries and Wetlands Management. (3:2:3)

WHEN TAUGHT: Fall
RECOMMENDED: PWS 225 or equivalent.
DESCRIPTION: Principles of fisheries and wetlands mangement, emphasizing managing fish populations and their diverse micro- and macro-habitats within the context of community and ecosystem dynamics. Case studies and models used to evaluate growth, recruitments, and mortality in age-structured populations in relationship to the dynamics of watershed and wetland landscapes.

Course Outcomes
- Understand ecological aspects of fisheries and wetland systems.
- Learn important aspects of fisheries and wetland management.
- Integrate concepts taught in class to other ecological systems.

PWS 330 : Rangeland Plant Identification and Ecology. (3:2:3)

WHEN TAUGHT: Winter
DESCRIPTION: Identification, characteristics, phenology, distribution, site adaptation, forage value, and response to management of significant range and pasture plants.

Course Outcomes
- Students will be able to sight identify many common range plants of North America
- Students will be able to use a grass key to identify unknown grasses
- Students will be able to pair symptoms of sick animals with poisonous plants that may have been consumed

PWS 331 : Science of Plant Pest Control. (3:3:0)

WHEN TAUGHT: Winter
DESCRIPTION: Management of plant health problems, namely weed, insect, and disease, through integrated pest management and proper pesticide management and safety.

Course Outcomes
- Enhance critical thinking skills.
- Develop a framework for decision-making and implementation in applied pest management and ecology.
- Recommend control options for plant pest management.
- Safely and accurately apply plant pesticides in urban and agricultural environments.
- Identify various plant pest control measures.
- Improve communication and interpersonal skills.

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481
DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes
- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

PWS 344 : Natural History of Wildlife. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.
RECOMMENDED: PWS 225 or equivalent.
DESCRIPTION: Wildlife species and their habitats, including ecology, life histories, adaptations, behavior, genetics and population

viability variables, and the ethics of global stewardship. Field trips required.

Course Outcomes
- In this course, students will be rigorously taught the scientific method and given opportunities to demonstrate the understanding through wildlife ecology problem solving. They will have writing assignments that provide opportunities for the synthesis and expression of the depth of their understanding.
- This course introduces students to a number of wildlife and fish species, and basic ecological concepts as they relate to wildlife and fisheries. Students will understand the biology, ecological roles, habitat needs, ecological adaptations, and interactions of fish and wildlife at various levels in an ecosystem.
- Be able to define “natural history” and be able to describe basic concepts and principles that comprise the natural history of an organism
- Gain an appreciation for the diversity of lifestyles among vertebrates
- Develop critical reading and thinking skills
- Improve oral and written communication skills

PWS 345 : Air Quality and Pollution. (2:2:0)

WHEN TAUGHT: Winter

DESCRIPTION: Origin, effects, ecology, and management of major atmospheric pollutants - current topics in air quality, methods for quantifying pollutants and assessing air quality, and policy and management principles governing air as a natural resource.

Course Outcomes
There are no course outcomes available

PWS 350 : Rangeland Ecology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: PWS 150 or Bio 100 or Bio 130 or PDBio 120.

DESCRIPTION: Distribution and abundance of organisms and their interactions with the physical and biotic components of the earth emphasizing rangeland ecosystems.

Course Outcomes
- Demonstrate a fundamental knowledge of ecological principles and the multiple dimensions of biodiversity.
- Possess a working knowledge of the ecology relating to soil, water, and air conservation.
- Understand how global and geologic processes affect life on earth.
- See the connectivity and relevance of ecology to other fields of study.
- Understand the importance of ecology to issues regarding human well-being.

PWS 355 : Rangeland Vegetation Measurements and Analysis. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Field methodologies for vegetation inventories and analysis (density, biomass, cover, frequency, utilization, etc.) in wildland settings.

Course Outcomes
- Students will be able to demonstrate, through lab exercises and write-ups, an understanding of ecological processes that drive secondary succession in wildland ecosystems which in turn impact management decisions.
- Students will be able to apply vegetation data collection techniques to quantify vegetation and make interpretations used in resource management decisions.

PWS 357 : Techniques for Wildlife Investigations and Management. (3:2:3)

WHEN TAUGHT: Fall

RECOMMENDED: PWS 350, 355.

DESCRIPTION: Investigatiion and management of fish and wildlife populations. Methods for population assessment, capture, handling, marking, radio-telemetry, behavioral studies, and human disturbance. Lab is required.

Course Outcomes
- The purpose of this course is to introduce students to a variety of methods used by wildlife biologists for the investigation and management of wildlife. Course content prepares students to observe wildlife, research wildlife literature, to rigorously apply the scientific method for problem solving, to evaluate data objectively, and to communicate research results effectively. This course is built upon principles of biodiversity, ecology, population dynamics, habitat, and conservation.

PWS 365 : Environmental Microbiology. (3:3:0)

WHEN TAUGHT: Fall

RECOMMENDED: Chem 101 or 105; PDBio 120; PWS 150.

DESCRIPTION: Environmental microbiology in aquatic and terrestrial systems. Detecting, enumerating, and identifying microorganisms. Bioremediation of organic and metal pollutants. Microbial-mediated transformations in nutrient cycling. Spread of pathogens.

Course Outcomes
- Demonstrate a fundamental knowledge of the environmental microbiology surrounding soil, water, and air conservation, quality, and pollution
- Understand the basic chemistry, biochemistry, and physics associated with the bioremediation, nutrient cycling, and pathogenesis
- Foster and promote environmental stewardship within yourself and your community
- Write and orally communicate more effectively and concisely

PWS 366 : Environmental Microbiology Lab. (1:0:3)

WHEN TAUGHT: Fall
PREREQUISITE: PWS 365 or concurrent enrollment.
RECOMMENDED: Chem 101 or 105; PDBio 120; PWS 150.
DESCRIPTION: Laboratory and field techniques. Detecting, enumerating, and identifying microorganisms via microscopic and cultural assays. Microbial transformation and responses to pollutants. Detecting techniques evaluating coliforms and fecal coliforms, viruses, and parasites.

Course Outcomes
There are no course outcomes available

PWS 369 : Science of Plant Production. (4:4:0)
WHEN TAUGHT: Contact Department.
PREREQUISITE: PWS 100, 282; or equivalents.
DESCRIPTION: Scientific principles of crop production related to agronomic and horticultural plants, including relationship of management principles and physiological processes in plants.

Course Outcomes
No outcomes are available at this time.

PWS 375 : Environmental Policies and Laws. (3:3:0)
WHEN TAUGHT: Winter
DESCRIPTION: Inception, current state, and future directions of seminal environmental policies and laws established in the US to improve environmental quality. Application of policies and laws in resource conservation and management, including a National Environmental Policy Act certification program.

Course Outcomes
- Demonstrate a fundamental understanding of the inception, current state, and future needs of the five seminal developments in environmental policy and law (i.e., Clean Air Act; Clean Water Act; National Environmental Policy Act; Comprehensive Environmental Response, Compensation, and Liability Act or Superfund; and the Endangered Species Act)
- Create your own conceptual framework for analyzing policy change in the United States and abroad, and understand the role of government, society, and economics in shaping this framework
- Understand the formal institutional setting in which policy is developed, the major participants involved, and the role of science in shaping policy
- Gain a basic understanding of how environmental laws (e.g., statutes, cases, and common laws) operate to regulate our interaction with the environment and one another
- Write more effectively and concisely

PWS 380 : Plant Community Design. (2:2:0)
WHEN TAUGHT: Fall
PREREQUISITE: PWS 103 & PWS 105 & BIO 235
DESCRIPTION: Design and ecology of thematic plant communities.

Course Outcomes
- Design a variety of landscapes and gardens with different contextual variables.
- Select plants, appropriate for a given design, based on correct horticultural and ecological knowledge (plant justification)
- Design better, design faster
- Further develop critiquing skills
- Prepare a landscape design portfolio for client interviews or graduate school applications.

PWS 390R : Special Topics in Plant and Wildlife Sciences. (1-3:Arr.:Arr.)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Current topics in plant and wildlife sciences.

Course Outcomes
- Students will gain knowledge from specialized instruction in focused area

PWS 391 : Careers in Landscape Management. (1:1:0)
WHEN TAUGHT: Fall
DESCRIPTION: Current information on internships, career options, and employment preparation skills in the landscape management/green industry.

Course Outcomes
There are no course outcomes available

400-Level Courses

PWS 402 : Urban Soils and Water. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: PWS 100 & PWS 282.
DESCRIPTION: Principles of water management, soil physics, and soil fertility used in a problem-solving environment addressing current challenges in managing soils and water in the urban landscape.

Course Outcomes

- Students will apply concepts assimilated in previous courses to solve problems associated with at least five real world case studies. By assignment, eachwill develop an assessment matrix for use in problem solving situations encountered in their future careers.
- A primary goal of this course is for students to greatly increase their knowledge base of scientific principles related to plant, water, soil, nutrient, and pest management. This will be assessed by examination at beginning and end of semester with a target of at least doubling of average scores.
- Students will successfully writeseveral documents, including a research paper and diagnostic key at an upperclassmen level of writing. Students will actively participate in team problem solving and a Group presentation.
- Students will develop at least one individual and group item to add to their portfolio. Development of a diagnostic key, writing an evaluation paper, development of a group presentation and completion of a semester project could each contribute to portfolios.

PWS 405 : Environmental Chemistry Lab 1. (1:0:2)

WHEN TAUGHT: Fall

PREREQUISITE: Chem 105, 106, 107; or equivalent.

RECOMMENDED: Chem 223; PWS 283, 306.

DESCRIPTION: Soil, water, biosolid, and biotic tissue sample preparation and analysis using chromatography, combustion, and spectroscopy.

Course Outcomes

There are no course outcomes available

PWS 406 : Environmental Chemistry Lab 2. (1:0:2)

WHEN TAUGHT: Winter

PREREQUISITE: Chem 105, 106, 107; or equivalent.

RECOMMENDED: Chem 223; PWS 283, 306.

DESCRIPTION: Soil, water, biosolid, and biotic tissue sample preparation and analysis using ICP-AES and AAS instrumentation.

Course Outcomes

There are no course outcomes available

PWS 411 : Watershed Management. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: BIO 350; or PWS 350

DESCRIPTION: Processes and management of the hydrologic cycle of forests and rangelands.

Course Outcomes

- Students will understand the history and policy that drives water management in the western US.
- Students will understand ecological and hydrological processes and concepts and apply them to watershed management actions such as harvesting, grazing, and restoration.
- Students will be able to apply assessment and classification tools to watersheds and their components to determine how management actions affect hydrologic responses.

PWS 413 : Safety Certifications for Field Biologists. (1-3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Certification modules promoting field safety to prepare students to be leaders in workplace safety. Specific trainings include first aid, CPR, hot and cold weather exposure, ATV and snowmobile operation, wild animal safety, and more.

Course Outcomes

- Upon completion of this course, students will be certified in the use of ATVs, wilderness first aid, CPR, firearms, rope handling, defensive driving, chainsaws, fire extinguishers, bear safety, and other field biologist-related safety trainings.
- Students will develop a safety mindset that will serve them throughout their lives.
- Students will learn to recognize workplace hazards and how to respond appropriately to them.

PWS 416 : Rangeland Vegetation Improvement. (3:2:3)

WHEN TAUGHT: Fall

RECOMMENDED: PWS 330, 350.

DESCRIPTION: Habitat improvement for domestic and wild animals. Plant control by mechanical equipment, herbicides, and prescribed fire. Restoration of disturbed lands.

NOTE: Field trips required.

Course Outcomes

- Apply the historical and successional history of land to current rangeland vegetation conditions and treatments
- Describe and plan biological, chemical, mechanical methods, and fire to achieve land management goals.
- Assess site potential and fuels relative to potential vegetation changes with and without management.
- Apply and plan revegetation, fire rehabilitation, and restoration practices to rangelands.
- Integrate plant control, revegetation and other restoration practices to meet land management goals
- Become familiar with approaches, practices, and outcomes of rangeland vegetation improvements in actual field situations.

PWS 417 : Rangeland Planning and GIS. (3:2:3)

WHEN TAUGHT: Winter

RECOMMENDED: PWS 215, 225, 350.

DESCRIPTION: Development of a multiple-use natural resource plan for watershed forestry, recreation, wildlife, and livestock. Policies that govern planning and conflict resolution.

Course Outcomes
- Identify and articulate stewardship for the creation as a basis for professional judgment.
- Apply an understanding of ecological processes to wildland management
- Demonstrate ability to apply the scientific method and analytical thinking to ecological and management issues.

PWS 419 : Forest Management and Ecology. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Managing forests, emphasizing ecosystem managment.

NOTE: Field trips required.

Course Outcomes
- 1. Articulate their role as stewards over forested environments.
- 2. Appreciate the diversity of forests world-wide and their importance to human populations.
- 3. Apply knowledge of forest structure, function, and process in making management decisions
- 4. Be able to quantify forest structure and production
- 5. Recognize forest pests and diseases and know appropriate control techniques.
- 6. Relate forests to wildlife habitat
- 7. Identify 75 tree species located in Utah and on BYU campus.

PWS 424 : Wildlife Law Enforcement. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: Bio 100 or equivalent.

DESCRIPTION: Current and historical principles of federal and state wildlife law enforcement, case development, evidence, evaluation, human rights, and testimony.

Course Outcomes
- Become familiar with significant wildlife laws
- Interact with professionals in the field
- Gain exposure to the methods and process of wildlife law enforcement

PWS 431 : Plant Health Diagnostics. (3:2:3)

WHEN TAUGHT: Fall

DESCRIPTION: Diagnosing plant health problems; pest biology and identification (weed, insect, and disease).

Course Outcomes
There are no course outcomes available

PWS 440 : Plant Physiology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: GE Biological Science requirement; college chemistry

RECOMMENDED: Chem 285; or 351, 352.

DESCRIPTION: Photosynthesis, respiration, water relations, mineral nutrition, growth of flowering plants.

Course Outcomes
- Students will be fluent in understanding plant function at the molecular, biochemical and whole plant levels
- Students will understand the connections between plant function and ecosystem processes
- Student will practice applying the scientific method in order to develop critical thinking and problem solving skills
- Student will engage in learning activities that increase there writing and speaking proficiency

PWS 446 : (PWS-Bio) Ornithology. (3:2:3)

WHEN TAUGHT: Winter

PREREQUISITE: Bio 100 or Bio 130 or PDBio 120 or PWS 100 or equivalent or instructor's consent.

DESCRIPTION: Avian systematics, evolution, distribution, identification, and natural history.

NOTE: One three-day field trip required.

Course Outcomes
- 1) Define ornithology and what it encompasses
- 2) Become proficient in bird identification (sight, sound, sign)
- 3) Develop an understanding of the unique characteristics of birds
- 4) Understand the current thinking regarding the evolution of birds
- 5) Describe the life history characteristics of birds and their annual cycle

PWS 468 : (PWS-Bio-MMBio) Genomics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PWS 340

DESCRIPTION: Current analysis of genes and genomes; computational and statistical approaches for analyzing genomic data, including genome sequencing and annotation, gene expression and the transcriptome, proteomics and functional genomics, and genetic variation and SNPs.

Course Outcomes
- Students can describe the technology and process used to sequence genomes (de novo and re-sequencing)
- Students can complete a series of exercises with data representing genomic experiments (analyze and interpret)
- Students can outline techniques and concepts for assessing genomic parameters such as methylation, gene expression, DNA-binding motifs, metagenomics, and comparative genomics.

PWS 481 : Case Studies, Landscape Management Systems. (2:2:0)

WHEN TAUGHT: Fall

DESCRIPTION: Understanding and demonstrating competency with business systems used in landscape contracting companies.

Course Outcomes

There are no course outcomes available

PWS 488 : Readings in Biotechnology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 340 & PDBIO 360

RECOMMENDED: PWS 440 or PDBio 362.

DESCRIPTION: Capstone course for the genetics and biotechnology major focusing on scientific literature relating to the biotechnological improvement of plants, animals, and microbes.

NOTE: Course should be taken the last year before graduation.

Course Outcomes

- Students can describe a variety of techniques and experimental approaches used by biotechnologists to improve plants, animals, microbes and human health.
- Students can deliver an oral presentation summarizing a scientific paper related to the field of biotechnology.
- Students can produce a written review synthesizing scientific findings related to recent biotechnological advances.

PWS 490 : Case Studies. (2:1:2)

WHEN TAUGHT: Contact Department.

PREREQUISITE: PWS 282

DESCRIPTION: Contemporary agricultural and environmental problems using decision case studies dealing with environmental technology issues and analysis.

Course Outcomes

There are no course outcomes available

PWS 491R : Undergraduate Seminar. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Current information in the plant and wildlife sciences.

Course Outcomes

- Explain the importance of cross-discipline research for comprehensive scholarship and the importance of Gospel-centered stewardship and sustainability.
- Display fluency in the vocabulary and current research techniques in the four focal areas of the PWS Department: environmental science; genetics and biotechnology; landscape management; and wildlife and wildlands conservation

PWS 492 : Wildlife and Wildlands Conservation Senior Seminar. (1:1:0)

WHEN TAUGHT: Winter

DESCRIPTION: Capstone course bringing together portfolios, student experiences, exams, and exercises necessary for completing and assessing wildlife and wildlands program learning outcomes.

Course Outcomes

- Students will understand how to take the next step toward permanent employment or post-graduate training.
- Students will pass plant, mammal, and bird ID competency exams as well as a comprehensive discipline exam.
- Students will build a professional portfolio that will demonstrate their specific training, experience, skills and abilities relative to Wildlife and Wildlands Conservation.

PWS 494R : Mentored Learning Experience. (1-6:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Topics vary.

NOTE: Registration required for mentored experiences.

Course Outcomes

- Design and/or participate in basic experiments attempting to answer questions in biochemistry, biotechnology, genetics, molecular biology, and soil science
- Generate and analyze experimental results for publications or presentations at professional meetings
- Learn how to be an effective and efficient mentor

: Biotechnology Laboratory.

Course Outcomes

: Plant Physiology Laboratory.

Course Outcomes

: Environmental Science Laboratory.

Course Outcomes

: Soil, Plant, and Water Science Laboratory.

Course Outcomes

: Environmental Science Field Techniques.

Course Outcomes

: Plant and Soil Science Field Techniques.

Course Outcomes

: Plant Breeding Field Techniques.

Course Outcomes

: Plant Tissue Culture and Transformation Techniques.

Course Outcomes

: Plant Cytogenetics Laboratory.

Course Outcomes

: Animal Cytogenetics Laboratory.

Course Outcomes

: Plant Cell Biology Laboratory.

Course Outcomes

: Analytical Techniques in Plant Biology.

Course Outcomes

: Environmental Science Computation Laboratory.

Course Outcomes

: Molecular Genetics and Gene Mapping Laboratory.

Course Outcomes

: Plant and Animal Genomics Laboratory.

Course Outcomes

: Analytical Techniques in Soil Science.

Course Outcomes

: Animal Genetics and Breeding Techniques.

Course Outcomes

: Soil Physical Properties Laboratory.

Course Outcomes

: Soil and Water Chemistry Laboratory.

Course Outcomes

: Animal Reproductive Research Laboratory.

Course Outcomes

: Field Techniques in Environmental Soil Research.

Course Outcomes

: Soil Microbiology Laboratory.

Course Outcomes

: Plant ID / URME Team.

Course Outcomes

500-Level Graduate Courses (available to advanced undergraduates)

PWS 505 : Ecosystem Ecology. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: Bio 350 or equivalent.

DESCRIPTION: Theory and application of nutrient cycling, trophic dynamics, disturbance, and spatiotemporal patterns in terrestrial and acquatic ecosystems - methods in ecological research (e.g., field and analytical chemistry techniques, isotope geochemistry, molecular methods, and ecosystem simulation modeling).

Course Outcomes
No outcomes are available at this time.

PWS 511 : Environmental Biophysics: Soil and Plant Water Relations. (4:3:2)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Phscs 105 and PWS 282; or equivalents.

DESCRIPTION: Integrating biological, physical, and chemical processes of water and solute movements through the soil-plant-atmosphere continuum.

Course Outcomes
- Students will take a pre- and post-semester exam and at least double their score to assess understanding of the importance of physics in biological systems.

PWS 512 : Rangeland Landscape Ecology and Geographic Information Systems. (3:2:3)

WHEN TAUGHT: Fall Odd Yrs.

RECOMMENDED: PWS 215, Geog 212.

DESCRIPTION: Applying landscape ecology theory to evaluate, describe, and predict spatial patterns and processes within rangeland ecosystems using geographic information systems (GIS), remote sensing, and global positioning systems (GPS).

Course Outcomes
- Students will be able to apply landscape ecology theory to evaluate, describe, and predict spatial patterns and processes in wildlife ecosystems. This will be furthered by synthesis of the literature and current theory.

PWS 514 : Soil Microbiology. (2:2:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: Chem 105 and 106; or equivalents.

DESCRIPTION: Ecology and role of soil microorganisms in biogeochemical cycles, decomposition of organic matter and waste materials, and bioremediation of contaminated soils and water.

Course Outcomes
- Ecology and role of soil microorganisms in nutrient cycling, decomposition of organic matter and waste materials, and degradation of agricultural chemicals in soils

PWS 520 : Saline and Sodic Soils. (3:2:3)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: PWS 305, Chem 105, 106, 107; or equivalents.

DESCRIPTION: Physical and chemical properties of saline and sodic soils and irrigation waters--their diagnosis, reclamation, and management for sustainable crop production.

Course Outcomes
- Physical and chemical properties of saline and sodic soils and irrigation waters-their diagnosis, reclamation, and management for sustainable crop production
- Demonstrate a fundamental knowledge in water quality and water resource conservation as influenced by soil water interactions
- Enhance critically thinking skills as it relates to issues in water quality management and soil conservation
- Improve mathematical and statistical skills related to salinity, sodicity, and toxicity evaluation and management

PWS 540 : Plant Response to the Environment. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: PWS 440 or equivalent; PWS 494R or concurrent enrollment.

DESCRIPTION: Advanced plant physiological ecology principles.

Course Outcomes
- Students will learn to apply the scientific method in order to become more proficient and independent learners
- Students will be able to conceptualize the physiological mechanisms by which plants sense and respond to their environment and how that impacts ecological systems.
- Students will participate in learning exercises that teaches them how to gather, interpret and communicate scientific information.
- Students will be exposed to the instrumentation and techniques commonly used to gather data in the field of plant physiological ecology.

PWS 547 : Ungulate Conservation and Management. (2:2:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: PWS or Bio 350; and Bio 447; or equivalents.

DESCRIPTION: Integrating principles of natural history, population ecology, behavior, and conservation biology of North American ungulates. Special emphasis on management and conservation applications.

Course Outcomes
- Will understand and be able to articulate current understanding concerning the role of ungulates in ecosystems
- students will develop the ability to critically think by reviewing and evaluating scientific articles or book chapters that examine ungulate ecology
- Students will develop presentation skills

PWS 551 : Quantitative Ecology. (3:2:3)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: Bio 350 or equivalent; Stat 121 or 511 or concurrent enrollment.

DESCRIPTION: Quantitative methods for ecological sampling and data analysis.

Course Outcomes
- Demonstrate application of the scientific and analytical methods in ecological research.
- Learn how and when to use appropriate sampling and a data analysis techniques for ecological inquiry.

- Demonstrate ability to synthesize literature relevant to a research project.
- Demonstrate oral and written scientific communications skills.

PWS 552 : Terrestrial Ecosystems. (3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Theory and application of plant and animal distribution in terrestrial environments.

Course Outcomes

No outcomes are available at this time.

PWS 553 : Restoration Ecology. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

PREREQUISITE: PWS 282, 416; Bio 350; or equivalents.

DESCRIPTION: Nature of ecosystem disturbance and plant succession; developing science and practice of ecological restoration; case studies of applied restoration.

Course Outcomes

- Students will understand the applications of plant population ecology, ecophysiology, and community ecology to restoration ecology.
- Students will understand the processes of plant succession as the foundation for restoration ecology.
- Students will be able to apply restoration ecology and techniques to practical problems such mined and other drastically-disturbed lands, disturbed terrestrial and riparian or wetland systems, and invasive species concerns

PWS 554 : Wildlife Behavioral Ecology. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: Bio 100, 350; or equivalents.

DESCRIPTION: Integrating principles of ethology, sociobiology, and behavioral ecology using examples from wildlife resources; behavioral sampling methods.

NOTE: Field trips required.

Course Outcomes

- Students will become familiar with the basic principles of animal behavior including:An introduction to the basic principles of animal behaviorA review of natural selection and its role in shaping animal behaviorA study of proximate factors which influence behaviorThe role of learningCooperationForagingAntipredator behaviorCommunicationHabitat selection, territoriality, and migrationAggressionPlayAging and diseaseAnimal personalities

PWS 559 : Molecular Plant Breeding. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: PWS 265, 340, 485, 586, PDBio 360; or equivalents; PWS 494R or concurrent enrollment.

DESCRIPTION: Molecular genetics methods applied to improvement of economically important plants. Theory and methods of plant transformations.

Course Outcomes

- Outline the history and uses of genetic molecular markers
- Discuss with proficiency the pros and cons of a minimum of seven different marker systems. Examples of these systems include RFLPs, RAPDs, AFLPs, SSRs, and SNPs
- Lead classroom discussions using current scientific literature as the basis for the discussion
- Prepare a manuscript for submission to a refereed scientific journal
- Explain scientific ethics, etiquette, and the underpinnings as to why it is important to publish scientific journals
- Discuss the differences between academic and industry-based science

PWS 560 : Soil and Plant Analysis. (2:1:3)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Chem 105, 106, 107; or equivalent.

RECOMMENDED: Chem 223 and/or PWS 283, 306, 405, 406

DESCRIPTION: Laboratory chemical analysis of soils and plant materials in soil and plant research.

Course Outcomes

There are no course outcomes available

PWS 575 : Plant Pathology. (3:2:3)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: PWS 100 or equivalent.

DESCRIPTION: Concepts associated with symptoms, development, control, and classification of plant diseases. Identification and classification of plant fungi, bacteria, and viruses.

Course Outcomes

- Diagnose and treat plant problems
- Identify major diseases that affect plants
- Culture and identify fungi and bacteria
- Employ problem solving skills, including enhanced ability to critically think and reason
- Display enhanced communication and interpersonal skills, including writing

PWS 586 : Plant Cell Biology. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: PDBio 360, PWS 340, 440; or equivalents.

DESCRIPTION: Molecular aspects of the structural and functional characteristics of plant cells, emphasizing characteristics of plant cells setting them apart from animal cells.

Course Outcomes

- Explain unique aspects of plant cell structure and function
- Read and explicate published research in plant cell biology
- Write coherently on topics related to plant cell biology
- Deliver an oral presentation of a topic related to plant cell biology

PWS 598R : Advanced Topics in the Plant and Wildlife Sciences. (1-3:ARR:0)

WHEN TAUGHT: Contact Department.

Course Outcomes

- Give students a specific topic to increase their understanding of the scientific method as it relates to focused research objectives.

Graduate Courses

For 600- and 700-level courses, see the BYU 2013–2014 Graduate Catalog.

Advisors are prepared to assist undergraduate students in successfully completing university, college, and major requirements. Students are encouraged to meet frequently with their advisors. Center personnel are available to help with registration, graduation requirements, fields of study, changes in major, and transfer evaluation, as well as to clarify policies and procedures.

Undergraduate Programs

Five undergraduate degrees are offered by the Marriott School of Management. The first is a bachelor's degree in management, which provides a broad management education. The program is designed to assist students in acquiring knowledge, insight, maturity, competence, and a strong sense of moral and ethical character. An area of emphasis may be taken by students seeking specialization. These areas include marketing, global supply chain, strategy, organizational behavior/human resources, entrepreneurship, and general business.

The second bachelor's degree is offered by the School of Accountancy to students seeking to combine accounting skills with broad management education (see the School of Accountancy section of this catalog for details). Accounting students interested in acquiring in-depth specialization or seeking careers in public accounting are encouraged to apply to the Master of Accountancy Program.

The third bachelor's degree is offered by the Information Systems Department to students seeking to combine information systems skills with broad management education (see the Information Systems section of this catalog for details). Students interested in acquiring in-depth specialization in information systems are encouraged to apply to the Master of Information Systems Management Program.

The fourth bachelor's degree is offered by the Recreation Management Department to students desiring a service-oriented profession that strengthens individuals, families, and communities by providing quality recreation programs. Students can choose between an emphasis in experience management or therapeutic recreation. A minor in nonprofit management is also available. Courses prepare students in the areas of leadership skills, program development and management, budgeting and finance, facilities management, and current issues in the recreation profession.

The fifth bachelor's degree is offered by the Finance Department. The finance field deals with the control, management, and allocation of financial resources. Finance careers can be divided into two primary areas: 1) corporate finance, which deals with the financial problems of a business firm and 2) financial services, which focuses on solving financial problems for client firms. Finance is a high-demand, high-reward field with significant professional opportunities for motivated students.

Graduation Application for Bachelor's Degree

When a student has completed 86–96 earned hours (usually during the junior year), he or she should apply for graduation at the Marriott School of Management Advisement Center.

Graduate Programs

The Marriott School of Management offers the following graduate degrees:

MAcc	Professional Accountancy
MAcc	Tax
MBA	Business Administration
MISM	Information Systems Management
MPA	Public Administration
MS	Youth and Family Recreation

Individual program brochures are available from the Marriott School of Management, 730 TNRB, Brigham Young University, Provo, UT 84602-3113. Also, refer to the BYU 2013–2014 Graduate Catalog.

Admission to Degree Program

The degree programs in the school carry special enrollment limitations. Please see the Marriott School of Management Advisement Center for specific details.

The Discipline

Accounting has been called the language of business in which accountants control, analyze, and report the financial resources of an enterprise. A good understanding of accounting principles and practices can serve as the basis for a career in any business field.

Career Opportunities

Accountants provide critical input and guidance in profit-seeking organizations, service and charitable organizations, educational institutions, government, public accounting firms—indeed, any organization that exists today.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- A major GPA of at least 2.5
- Be in good standing with the Honor Code Office

Undergraduate Programs and Degrees

MAcc in Tax

For more information see the current Marriott School of Management School of Accountancy Web site at http://marriottschool.byu.edu/macc and the BYU 2013–2014 Graduate Catalog.

General Information

Undergraduate Application Requirements

All new students entering the undergraduate accounting program commence their study at the beginning of the fall semester. Admission into the undergraduate accounting program is based on consideration of the following:

1. The applicant's overall GPA and GPA in the following prerequisite courses: Acc 200, Acc 310, Bus M 201, Bus M 241, IS 100/102, and IS 201
2. The applicant's personal statement
3. Comments from professors
4. A review of the overall academic record of the applicant

Admission Policies

The following policies apply in making admission decisions for each fall semester cohort of students:

1. Admission to the undergraduate accounting program is by online application filed directly with the School of Accountancy. Applications are filed at http://marriottschool.byu.edu/soa/. Notice of admission decisions is given online.
2. Each year, the last day to apply to commence study in the fall semester is the last business day in June at 4:30 p.m. A student may, however, apply for fall semester admission as early as November 1 in the preceding year. In most cases admission decisions are made on a monthly basis.
3. Repeating the prerequisite courses (Acc 200, 310, Bus M 201, Bus M 241, and I Sys 201) to improve grades for purposes of admission is strongly discouraged. Repeated prerequisite grades from BYU are discounted one full letter grade (e.g., a repeated grade of A is calculated as a B for admission purposes only). No prerequisite course may be repeated more than once. A minimum overall 3.0 GPA is required across all prerequisite courses. A grade of B or better is required in Acc 200 and Acc 310.
4. The accounting program is designed for entry at the beginning of a student's junior year. Moreover, at the end of the junior year, many students immediately commence graduate studies. Therefore, a student entering the accounting program must have substantially completed general education requirements. It is also recommended that the student completes Econ 110, MCom 320, and Acc 241. These three courses must be completed before taking the Management Integrated Core or before entering the MAcc program.
5. Potential applicants who will transfer from other schools are strongly encouraged to take Acc 310 at BYU and include an ACT/SAT score with their application, if the test was taken. Grades transferred from other schools are discounted .3 in the application process.
6. The School of Accountancy reserves the right to allow exceptions in the admission process where it is deemed necessary to admit the most qualified students.

Program Requirements | View MAP | View Program Outcomes

1. No more than 6 credit hours of transfer credit will be accepted toward the upper-division major requirements. No transfer credit will be accepted for the Junior Core or Integrated Management Core courses.

2. Demonstrate a knowledge of computer skills. Students may demonstrate spreadsheet skills with either a minimum grade of B in an equivalent transfer course or a P grade in the following:

   IS 100 : Computer Spreadsheet Skills. (.5:0:1)

   WHEN TAUGHT: Spring; Summer

   DESCRIPTION: Basic computer skills, focusing on spreadsheet and database programs. No technical background necessary.

   Course Outcomes
   - Students will be able to construct an Excel Spreadsheet with appropriate formulas, functions, labels, charts, media inserts, hyperlinks, and data base functions – and output the report.

   IS 102 : Business Analysis Using Spreadsheets. (.5:1:0)

   WHEN TAUGHT: Fall; Winter; Spring

   PREREQUISITE: IS 100.

   DESCRIPTION: Basic computer skills focusing on features in MS Excel such as Scenario Manager, Solver, Pivot Tables, and Macros to solve complex business problems.

   Course Outcomes
   - Build robust spreadsheet models of business problems to make rational, data-driven managerial recommendations effectively solving those problems.
   - Manipulate spreadsheet models of business problems to examine the robustness of proposed solutions to those problems.
   - Implement macro programming techniques for automating spreadsheets to create flexible and powerful spreadsheet models of business problems.

3. Complete the following prerequisite courses:

   ACC 200 : Principles of Accounting. (3:3:0)

   OFFERED: Independent Study also.

   DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

   Course Outcomes
   - Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
   - Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
   - Comfortably use accounting terms and concepts in business-related discussions.
   - Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
   - Write a brief, focused memo demonstrating basic understanding of background business reading material.
   - Use computer-aided learning tools and online learning resources.
   - Manage workload in a self-paced learning environment.

   ACC 310 : Principles of Accounting 2. (3:3:0)

   OFFERED: Available on BYU campus only.

   WHEN TAUGHT: Fall; Winter; Spring; Summer

   PREREQUISITE: ACC 200

   DESCRIPTION: Additional issues in financial and managerial accounting. Review of issues related to balance sheet

accounts, performance evaluation and capital budgeting.

Course Outcomes
- Construct and interpret both a balance sheet and income statement that include elements more advanced than the basic items introduced in Acc 200.
- Construct and interpret a statement of cash flows.
- Apply the financial accounting rules that exist in the following areas:a. Revenue recognition (including SAB 101)b. Inventoryc. Long-term assets (including impairment)d. Bondse. Leases (including the financial ratio impact of operating leases)f. Stockholders' equity (including accumulated other comprehensive income)g. Investment securities (including use of the market adjustment account)
- Employ the time value of money in a financial accounting context.
- Apply managerial accounting concepts in the following areas:a. Use the concepts of financial leverage and operating leverage to assess a company's riskiness.b. Perform cost-volume-profit analysis using regresssion to identify the fixed and variable components of a mixed cost and in multiple-product settings.c. Track product costs through a manufacturing process (including use of process costing).d. identify problems through the use of cost variance analysis.
- Construct and use simple Excel spreadsheets in a variety of business settings.
- Independently manage time and workload for a variety of tasks.

BUS M 201 : Financial Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Acc 200 or equivalent.

DESCRIPTION: Financial statement analysis, financial planning, sources of financing, working capital management, risk and return, and valuation.

Course Outcomes
- Use fundamental analysis to conduct a firm performance evaluation.
- Construct a financial forecast for a term.
- Employ time value of money to solve common financial problems.
- Make corporate investment decisions using capital budgeting.
- Be able to value firms, bonds, and stocks.
- Understand how entrepreneurial and corporate finance differ.

BUS M 241 : Marketing Management. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Marketing's role in society and the firm, marketing opportunities, the consumer market, and management of marketing mix.

Course Outcomes
- Understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers.
- Describe how specific firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Design a marketing plan for a new venture by applying the appropriate tools and approaches studied

IS 201 : Introduction to Management Information Systems. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: IS 100 and IS 102.

DESCRIPTION: Using technology to solve business problems. Hands-on spreadsheet, database, and Internet software in a business context.

Course Outcomes
- Manipulate and analyze data to make appropriate recommendations for managerial decision-making.
- Design, build, and query a database to apply correct principles of data storage and extraction.
- Develop effective personal computer and Internet search skills.

Note: These courses are used in determining admission to the undergraduate accounting program.

4. Apply and be formally accepted into the program.

5. Complete the following required courses:

ACC 241 : Business Law in the Environment. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Marriott School of Management major status.

DESCRIPTION: Introduction to legal principles and institutions affecting business.

Course Outcomes
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for the following topics: sources of law, courts and their procedures, jurisdiction, crimes, and torts.
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for: contract formation, defects in agreement, the statute of frauds and the parole evidence rule, third party rights, and breach/remedies.
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for: agency formation and termination, partnerships, LLC's, and corporate formation and operation.
- Apply ethical principles to legal problems.

ECON 110 : Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
There are no course outcomes available

: Honors Economic Principles and Problems.

Course Outcomes

M COM 320 : Communication in Organizational Settings. (3:3:1)
OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: GE First-Year Writing requirement. To be taken before senior year. Not for freshmen.
DESCRIPTION: Developing written and oral communications for professional organizations, including composing and designing employment communications. Incorporates oral presentations.
NOTE: Fulfills GE Advanced Written and Oral Communication requirement.

Course Outcomes
- Compose various commonly occurring business texts, achieving effectiveness in design, organization, content, and style.
- Demonstrate knowledge of generally accepted grammar standards (from Writing & Speaking for Business).
- Give effective oral presentations with appropriate visual support, achieving effectiveness in message, media, and messenger.
- Create effective business graphics and implement effective visual-design principles.

: Honors Communication in Organizational Settings.

Course Outcomes

Note: It is recommended that Econ 110 and M Com 320 be taken before entering the junior core. Econ 110 and M Com 320 must be completed before starting the Integrated core or first year of the MAcc program.

6. Complete the following Junior Core courses:

ACC 401 : Business and Accounting Information Systems. (4:4:0)
PREREQUISITE: Admission to SOA.
DESCRIPTION: Inputs, processing, outputs, and files of several transaction-processing subsystems. Foundation for understanding internal control. Variety of tools used to design, create, or document accounting information systems (AIS) to achieve organizational objectives.

Course Outcomes
- Analyze a set of business processes and report control deficiencies
- Learn how to evaluate the appropriateness of various controls
- Model data relations required to support an accounting information system
- Communicate effectively both in writing and in presentations
- Use technology effectively in solving business problems.

ACC 402 : Cost and Managerial Accounting. (4:4:0)
PREREQUISITE: Admission to SOA.
DESCRIPTION: Cost and managerial accounting topics, including production processes, product costing, cost behavior analysis with regression, differential costing, capital budgeting, throughput accounting, performance measurement, and budgeting.

Course Outcomes
- Know how to use management accounting to plan, control, and evaluate business processes.
- Apply management accounting concepts to real-world settings.
- Demonstrate that an improved ability to function in a team setting.
- Use Excel effectively to analyze and solve business problems.

ACC 403 : Intermediate Financial Accounting 1. (4:4:0)
PREREQUISITE: Admission to SOA.
DESCRIPTION: Financial reporting issues for balance sheet, income statement, and cash-flow statement. Revenue recognition, accounting for long-term assets, investment securities, and derivative instruments; consolidation.

Course Outcomes
- Apply intermediate-level financial accounting procedures to the construction and interpretation of balance sheets, income statements, and statements of cash flows.
- Evaluate the ethical considerations of such accounting-related topics as earnings management and the strategic choice of accounting procedures.
- Understand the use of fair values in accounting.
- Use the structure of financial statements and an understanding of financial accounting standards and processes to analyze business issues in an unstructured, case-based setting.

ACC 404 : Financial Accounting 2. (4:4:0)

PREREQUISITE: Admission to SOA.

DESCRIPTION: Accounting for receivables and inventory. Major reporting issues associated with liabilities and stockholder's equity. Introduction to computing basic and diluted earnings per share.

Course Outcomes

- Demonstrate, through homework, quizzes and examinations that you can prepare journal entries and footnote disclosures required to account for and report in compliance with GAAP the following areas:LeasesDerivativesStock related transactionsEarnings per shareInvestmentsConsolidationsIncome taxes
- Demonstrate, through homework, quizzes and examinations, that you can apply the appropriate procedures for accounting for changes and error corrections.

ACC 405 : Fundamentals of Taxation. (4:4:0)

PREREQUISITE: Admission to SOA.

DESCRIPTION: Tax principles applicable to business entities and individuals; tax compliance issues; tax planning as part of overall strategic planning process for businesses and individuals.

Course Outcomes

- Demonstrate a working knowledge of taxation
- Work effectively in groups to solve unstructured tax problems related to taxation.
- Demonstrate an ability to communicate at a professional level in both writing and verbal presentations.
- Demonstrate working skills in using information technologies commonly expected of entry level professionals in taxation

ACC 406 : Financial Statement Auditing. (4:4:0)

PREREQUISITE: Admission to SOA.

DESCRIPTION: Introduction to framework providing financial statement assurance; integrating accounting and business knowledge with concepts from other disciplines such as statistics and law; framework applied to major business cycles, providing specific knowledge in financial statement auditing.

Course Outcomes

- be able to identify, define and apply the key concepts related to the financial statement auditing process and the audit of internal control
- be able to combine their knowledge of the auditing process with analytical reasoning to reach justifiable auditing decisions.
- be able to develop audit strategies for several of the major financial statement cycles
- be able to identify, define and apply the basic concepts underlying professional ethics
- be able to perform basic audit analyses using software used in audit practice
- be able to identify and define the primary components of the environment in which auditors operate

7. Complete the following Integrated Management Core courses:

BUS M 361 : Introduction to Supply Chain and Operations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Acceptance into the Marriott School.

DESCRIPTION: Managing and designing processes and people along the value chain.

Course Outcomes

There are no course outcomes available

BUS M 390 : Ethics for Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Premanagement and Management 1 cores and full acceptance into the Marriott School upper-division major.

DESCRIPTION: Analyzing ethical dilemmas and understanding ethical theories as they apply to decision making in management.

Course Outcomes

- Identify and address common ethical issues that arise for individuals, managers, and organizations.
- Use contemporary and classic frameworks to analyze and suggest resolutions to ethical dilemmas.
- Recognize how individual differences and cognitive barriers can influence ethical judgment.
- Identify key organizational tools, policies, systems, and laws that apply to managing ethical conduct.
- Identify and prioritize personal values and apply those to making ethical decisions.

ORG B 321 : Organizational Effectiveness. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

PREREQUISITE: For Marriott School of Management majors only.

DESCRIPTION: Theories and concepts for creating effective organizations, e.g., individual, group, and organizational processes and human resource functions, including selection, compensation, and performance management.

Course Outcomes

- Students will know how to explain and discuss the characteristics of an effective organization and how to create them, how to attract and train an effective workforce, how to motivate employees to accomlish the organization's goals, and how to create a productive work environment.
- Students will be able to effectively work in a team.
- The students will learn how to manage change effectively.

Note: If completing the MAcc, these courses will be replaced by the MSM Core.

8. Complete the following after Acc 401, 402, 403, 404, 405, 406:

FIN 402 : Managerial Finance for Non-Finance Majors. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: FIN 201; or BUS M 201; or ACC 401; Major status.

DESCRIPTION: Overview of financial management issues including capital budgeting, cost of capital, capital structure/dividends, and long-term financial planning.

NOTE: For non-finance majors.

Course Outcomes
There are no course outcomes available

BUS M 498 : Strategic Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Major status; Management Integrated Core.

DESCRIPTION: Concepts, tools, and approaches to understand competitive forces and to systematically and consistently develop sustainable competitive advantages.

Course Outcomes

- Demonstrate knowledge of and ability to apply key strategic management concepts (strategy framework, external analysis [industry, competition, customers], resource & capabilities analysis, and strategies for growth and innovation).
- Utilize concepts to develop coherent strategic plans and recommendations for a business or organization.
- Demonstrate the ability to implement a coherent strategy by utilizing information from all business areas and functions (strategy, marketing, finance, accounting, operations, and HR) and making decisions in each of those areas.
- Use appropriate analytical, critical thinking, and creative problem solving skills when confronted with a business situation or problem.
- Demonstrate the ability to communicate orally and in writing regarding strategy topics in ways that meet the MCOM 320 criteria.
- Work effectively as a part of a team.

Note: If completing the MAcc, these courses will be replaced by the MAcc courses.

9. Complete Marriott School exit survey online.

*Hours include courses the may fulfill university core requirements.

- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

ACC 201 : Principles of Financial Accounting. (3:3:1)

OFFERED: Independent Study only.

DESCRIPTION: First course in concepts and methods underlying financial statements.

Course Outcomes

There are no course outcomes available

ACC 202 : Principles of Managerial Accounting. (3:3:1)

OFFERED: Independent Study only.

PREREQUISITE: ACC 201

DESCRIPTION: Second course in the elementary series covering managerial problems and control of business operations.

Course Outcomes

- Construct and interpret a statement of cash flows, including operating cash flows, investing cash flows, and financing cash flows.
- Construct and use internal accounting tools such as budgets, product cost reports, breakeven analysis, and nonroutine decision analyses.
- Analyze transactions, record those transactions, and then use the accounting cycle to generate accounting reports.
- Apply the financial accounting rules that exist in the area of inventory for a manufacturing company.
- Intelligently discuss the ethical dimensions of a variety of accounting-related business problems.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

ACC 241 : Business Law in the Environment. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Marriott School of Management major status.

DESCRIPTION: Introduction to legal principles and institutions affecting business.

Course Outcomes

- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for the following topics: sources of law, courts and their procedures, jurisdiction, crimes, and torts.
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for: contract formation, defects in agreement, the statute of frauds and the parole evidence rule, third party rights, and breach/remedies.
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for:

agency formation and termination, partnerships, LLC's, and corporate formation and operation.
- Apply ethical principles to legal problems.

300-Level Courses

ACC 300 : Introduction to Accounting 2. (3:3:)

OFFERED: Available as Independent Study only.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: ACC 200
DESCRIPTION: Additional issues in financial and managerial accounting. Review of issues related to balance sheet accounts, performance evaluation and capital budgeting.
NOTE: For non-business majors.

Course Outcomes
There are no course outcomes available

ACC 310 : Principles of Accounting 2. (3:3:0)

OFFERED: Available on BYU campus only.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: ACC 200
DESCRIPTION: Additional issues in financial and managerial accounting. Review of issues related to balance sheet accounts, performance evaluation and capital budgeting.

Course Outcomes
- Construct and interpret both a balance sheet and income statement that include elements more advanced than the basic items introduced in Acc 200.
- Construct and interpret a statement of cash flows.
- Apply the financial accounting rules that exist in the following areas:a. Revenue recognition (including SAB 101)b. Inventoryc. Long-term assets (including impairment)d. Bondse. Leases (including the financial ratio impact of operating leases)f. Stockholders' equity (including accumulated other comprehensive income)g. Investment securities (including use of the market adjustment account)
- Employ the time value of money in a financial accounting context.
- Apply managerial accounting concepts in the following areas:a. Use the concepts of financial leverage and operating leverage to assess a company's riskiness.b. Perform cost-volume-profit analysis using regresssion to identify the fixed and variable components of a mixed cost and in multiple-product settings.c. Track product costs through a manufacturing process (including use of process costing).d. identify problems through the use of cost variance analysis.
- Construct and use simple Excel spreadsheets in a variety of business settings.
- Independently manage time and workload for a variety of tasks.

400-Level Courses

ACC 401 : Business and Accounting Information Systems. (4:4:0)

PREREQUISITE: Admission to SOA.
DESCRIPTION: Inputs, processing, outputs, and files of several transaction-processing subsystems. Foundation for understanding internal control. Variety of tools used to design, create, or document accounting information systems (AIS) to achieve organizational objectives.

Course Outcomes
- Analyze a set of business processes and report control deficiencies
- Learn how to evaluate the appropriateness of various controls
- Model data relations required to support an accounting information system
- Communicate effectively both in writing and in presentations
- Use technology effectively in solving business problems.

ACC 402 : Cost and Managerial Accounting. (4:4:0)

PREREQUISITE: Admission to SOA.
DESCRIPTION: Cost and managerial accounting topics, including production processes, product costing, cost behavior analysis with regression, differential costing, capital budgeting, throughput accounting, performance measurement, and budgeting.

Course Outcomes
- Know how to use management accounting to plan, control, and evaluate business processes.
- Apply management accounting concepts to real-world settings.
- Demonstrate that an improved ability to function in a team setting.
- Use Excel effectively to analyze and solve business problems.

ACC 403 : Intermediate Financial Accounting 1. (4:4:0)

PREREQUISITE: Admission to SOA.
DESCRIPTION: Financial reporting issues for balance sheet, income statement, and cash-flow statement. Revenue recognition, accounting for long-term assets, investment securities, and derivative instruments; consolidation.

Course Outcomes
- Apply intermediate-level financial accounting procedures to the construction and interpretation of balance sheets, income statements, and statements of cash flows.
- Evaluate the ethical considerations of such accounting-related topics as earnings management and the strategic choice of accounting procedures.
- Understand the use of fair values in accounting.

- Use the structure of financial statements and an understanding of financial accounting standards and processes to analyze business issues in an unstructured, case-based setting.

ACC 404 : Financial Accounting 2. (4:4:0)

PREREQUISITE: Admission to SOA.

DESCRIPTION: Accounting for receivables and inventory. Major reporting issues associated with liabilities and stockholder's equity. Introduction to computing basic and diluted earnings per share.

Course Outcomes

- Demonstrate, through homework, quizzes and examinations that you can prepare journal entries and footnote disclosures required to account for and report in compliance with GAAP the following areas:LeasesDerivativesStock related transactionsEarnings per shareInvestmentsConsolidationsIncome taxes
- Demonstrate, through homework, quizzes and examinations, that you can apply the appropriate procedures for accounting for changes and error corrections.

ACC 405 : Fundamentals of Taxation. (4:4:0)

PREREQUISITE: Admission to SOA.

DESCRIPTION: Tax principles applicable to business entities and individuals; tax compliance issues; tax planning as part of overall strategic planning process for businesses and individuals.

Course Outcomes

- Demonstrate a working knowledge of taxation
- Work effectively in groups to solve unstructured tax problems related to taxation.
- Demonstrate an ability to communicate at a professional level in both writing and verbal presentations.
- Demonstrate working skills in using information technologies commonly expected of entry level professionals in taxation

ACC 406 : Financial Statement Auditing. (4:4:0)

PREREQUISITE: Admission to SOA.

DESCRIPTION: Introduction to framework providing financial statement assurance; integrating accounting and business knowledge with concepts from other disciplines such as statistics and law; framework applied to major business cycles, providing specific knowledge in financial statement auditing.

Course Outcomes

- be able to identify, define and apply the key concepts related to the financial statement auditing process and the audit of internal control
- be able to combine their knowledge of the auditing process with analytical reasoning to reach justifiable auditing decisions.
- be able to develop audit strategies for several of the major financial statement cycles
- be able to identify, define and apply the basic concepts underlying professional ethics
- be able to perform basic audit analyses using software used in audit practice
- be able to identify and define the primary components of the environment in which auditors operate

ACC 440 : Corporate Financial Reporting. (3:3:0)

PREREQUISITE: ACC 200 & BUS M 301; or ACC 200 & BUS M 201; or ACC 200 & FIN 201

DESCRIPTION: Accounting principles of corporate financial reporting. Judgments managers make preparing financial statement information. How complexities, alternatives, and impacts affect completed financial statements.

NOTE: For nonaccounting majors.

Course Outcomes

- Identify financial statement areas where managers can exercise significant judgment and identify how managers choices in these areas impact earnings reported in financial statements. Specific areas addressed include the following:Financial ForecastsPrimary Financial StatementsEarnings ManagementLeasesPensionsFinancial statement footnotesLong-lives AssetsInventory accountingIncome Taxes
- Demonstrate the proficiency to address CFA exam questions over the topic areas covered in this course.
- Apply ethical considerations to earnings management issues.

ACC 453 : Money, the Financial System, and the Economy. (3:3:0)

DESCRIPTION: Applications of industry analysis and microeconomic principles in the macroeconomic environment that influences individuals and financial intermediaries that transact in money and credit markets.

Course Outcomes

- Understand interest rates, rate determination and discounted present value.
- Understand differential spot, forward & derivatives, futures and options markets, with specific application to stocks and US Treasuries.
- Understand the function and management of financial intermediaries.
- Understand basic aggregate economics: actual and potential supply and actual demand and their implication for growth, employment and inflation.
- Understand trade and exchange rates.

- Aerospace Studies (Air Force ROTC)

Course Information

- Aerospace Studies Courses

Aerospace Studies (Air Force ROTC)

Colonel Paul M. Kucharek, Chair
380 ROTC, (801) 422-2671

Admission to Degree Program

Students must be accepted by the department into the program.

The Discipline

The Air Force Reserve Officer Training Corps (AFROTC) is an educational program designed to provide students the opportunity to become Air Force officers while completing requirements for an undergraduate or graduate degree. Four-year and three-year programs are available for both men and women.

Career Opportunities

Officer in the United States Air Force.

General Information

Textbooks, Uniforms, and Allowance. All textbooks, uniforms, and uniform accessories are furnished by the Air Force, in addition to the tax-free allowance of $450 to $500 per month furnished to those in the Professional Officer Course (POC) program.

Air Force ROTC Scholarship Program. All current scholarship information can be found at http://afrotc.com/scholarships/.

Field Training. All cadets must attend a field training camp in order to enter the Professional Office Corps (last two years). Cadets in the full four-year program will attend field training after the completion of their second (AS 200) year. Cadets who begin the program with less than 4 years remaining before graduation will attend Field Training after their first year in the program.

This training gives an increased understanding of the Air Force mission, and operations to include expeditionary (deployed) operations. Cadets receive practical experience in leadership and management while residing on an Air Force base. Additionally, cadets are provided hands-on training in combatives, weapons qualifications, squad tactics, and contingency operations. Medical care, housing, food, and uniforms, as well as transportation to and from the training base, are provided; approximately $500 in pay is received for four-week training.

Extracurricular Activities. Each Air Force ROTC student will be able to participate in a variety of extracurricular activities, including the Arnold Air Society, the color guard, and the honor guard. Selected cadets may also participate in summer programs such as the career-field shadow program or airborne training (parachute jump school).

LDS Missions. Students who are accepted in to the program and who desire to serve a Church mission must consult with department staff. This will facilitate entrance into the Professional Officer Course program. Scholarship students may have their scholarship held while they fulfill a mission.

Fifth-Year Cadets. Four-year program students in Air Force ROTC who are in a five-year university program are allowed a year of completed status after their senior AFROTC courses. Out-of-phase students and those who will be student teaching should consult with the department chair.

Discipline. Disciplinary training in the cadet corps is formulated and administered by the student officers. Air Force ROTC students are civilians and are not subject to military law.

Veterans. A veteran seeking a commission through Air Force ROTC may have part or all of the freshman and sophomore program waived. Allowances are paid in addition to G.I. Bill benefits.

Program Requirements

Four-Year Program

The more popular and preferred program is the traditional Four-Year Program. Interested freshmen register for aerospace studies in the fall semester, enrolling in aerospace studies courses in the same manner as for other college courses. There is *no military obligation* for the first two years of Air Force ROTC unless on an Air Force ROTC scholarship. During this time students learn more about the Air Force and the historical development of air power. After completing the first two years, known as the General Military Course (GMC), students may *compete* for entry into the last two years, the Professional Officer Course (POC). If accepted, students will attend a four-week summer field training encampment between their sophomore and junior years before entering the POC. Cadets in the POC study leadership, management, and national defense policy while receiving a nontaxable subsistence allowance of $450 for juniors and $500 for seniors each month.

Three-Year Program

Students entering the program as sophomores can "dual enroll" in both the Aeros 100 and 200 academics simultaneously. If accepted, students will attend a four-week field training the next summer.

Qualifications

1. Be a United States citizen.
2. Be a full-time student.
3. Be eighteen years of age, or seventeen years of age with parent's or legal guardian's consent.
4. Be physically qualified.
5. Be of good moral character.
6. Be in good academic standing.
7. Be interviewed and selected by a board of Air Force officers.
8. Complete all commissioning requirements as follows:
    a. Pilot or navigator candidate: Complete before age twenty-nine so as to enter undergraduate pilot/navigator training before age thirty.
    b. Scholarship recipient: Complete before age thirty-one in eligible year of commissioning.
    c. Nonscholarship recipient: Complete before age thirty-five.
    d. Successfully pass the Air Force Officer Qualifying Test.

Required Courses

1. General Military Courses: complete the following:
   Aeros 100, 101, 110, 111, 200, 201, 210, 211.
2. Professional Officer Courses: complete the following:
   Aeros 300, 301, 310, 311, 400R, 401R, 410, 411.

Minor

- Aerospace Studies (Air Force ROTC)

Course Information

- Aerospace Studies Courses

Minor in Aerospace Studies (16 hours)

Program Requirements

1. Complete the following:

AEROS 110 : The Air Force Today. (1:2:0)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Aeros 100.

DESCRIPTION: Development, organization, and core values of the U.S. Air Force, emphasizing the foundations of officership.

Course Outcomes
- Know the history of the Air Force, how it is organized and what it does for the country
- Know what career opportunities are available as an Air Force officer
- Know the benefits afforded members of the military
- Know and develop productive life skills
- Demonstrate basic oral and written communications skills

AEROS 111 : Aerospace Defense, General Purpose, and Support Forces. (1:2:0)

WHEN TAUGHT: Winter

PREREQUISITE: Concurrent enrollment in Aeros 101.

DESCRIPTION: U.S. Air Force Major Command structure and the origins of the Air Force.

Course Outcomes
- Know the history of the Air Force, how it is organized and what it does for the country
- Know what career opportunities are available as an Air Force officer
- Know the benefits afforded members of the military
- Know and develop productive life skills
- Demonstrate basic oral and written communications skills

AEROS 210 : The Developmental Growth of Air Power. (1:1:0)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Aeros 200.

DESCRIPTION: Development of various concepts of air power employment, emphasizing factors that have prompted research and technological change through the early 1960's.

Course Outcomes
- Know the key terms and definitions used to describe air and space power
- Comprehend the events, leaders, and technical developments that surrounded the evolution of USAF air and space power
- Demonstrate basic verbal and written communication skills
- Comprehend the Air Force Core Values and examples of their use throughout the evolution of USAF air and space power

AEROS 211 : The Developmental Growth of Air Power. (1:1:0)

WHEN TAUGHT: Winter

PREREQUISITE: Concurrent enrollment in Aeros 201.

DESCRIPTION: Development of various concepts of air power employment, emphasizing factors that have prompted research and technological change from Vietnam to the present.

Course Outcomes
There are no course outcomes available

AEROS 310 : Management and Leadership. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Aeros 300.

DESCRIPTION: Writing, speaking, and listening as communication skills; management concepts; responsibilities and ethics for an Air Force junior officer.

Course Outcomes
- Define the concept of leadership
- Explain the relationship between leadership and management

- Explain the ways of determining leadership effectiveness
- Identify the major research theories of leadership and its processes
- Explain the interactional framework of leadership

AEROS 311 : Management and Leadership. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Concurrent enrollment in Aeros 301.

DESCRIPTION: Principles of leadership, problem solving, decisions, discipline, and human relations. Emphasis on career planning as an Air Force junior officer.

Course Outcomes

- Define the concept of leadership.
- Explain the relationship between leadership and management.
- Explain the ways of determining leadership effectiveness.
- Identify the major research theories of leadership and its processes.
- Explain the Interactional Framework of Leadership.

AEROS 410 : National Security Affairs. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Aeros 400R.

DESCRIPTION: Civilian control of military, civil-military interaction, the forming of defense strategy. Military profession; Russia, Europe, and East Asia regional studies.

Course Outcomes

- Know the basic elements of national security policy and process
- Know the air and space power functions and capabilities
- Understand selected roles of the military in society
- Understand current issues affecting the military profession
- Understand the military justice system
- Comprehend the responsibility, authority, and functions of an Air Force commander
- Apply listening, speaking, and writing skills in Air Force particular formats and situations with accuracy, clarity, and appropriate style
- Understand the factors that facilitate a smooth transition from civilian to military life

AEROS 411 : National Security Affairs. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Concurrent enrollment in Aeros 401R.

DESCRIPTION: Africa, Middle East, and Latin American regional studies; military operation other than war; military justice system; officer professional development.

Course Outcomes

- Be able to explain the basic elements of national security policy and process.
- Know the air and space power functions and capabilities.
- Differentiate between selected roles of the military in society.

100-Level Courses

AEROS 100 : Leadership Laboratory--Freshmen. (.5:0:2)

WHEN TAUGHT: Fall

DESCRIPTION: Basic fundamentals of military leadership--drill, courtesy, planning, and organizing at various levels of responsibility.

Course Outcomes
- Know and apply basic military skills
- Know and apply basic field training skills
- Know and apply advanced field training skills
- Be physically fit

AEROS 101 : Leadership Laboratory--Freshmen. (.5:0:2)

WHEN TAUGHT: Winter

DESCRIPTION: Basic fundamentals of military leadership--drill, courtesy, planning, and organizing at various levels of responsibility.

Course Outcomes
- Know and apply basic military skills
- Know and apply basic field training skills
- Know and apply advanced field training skills
- Be physically fit

AEROS 110 : The Air Force Today. (1:2:0)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Aeros 100.

DESCRIPTION: Development, organization, and core values of the U.S. Air Force, emphasizing the foundations of officership.

Course Outcomes
- Know the history of the Air Force, how it is organized and what it does for the country
- Know what career opportunities are available as an Air Force officer
- Know the benefits afforded members of the military
- Know and develop productive life skills
- Demonstrate basic oral and written communications skills

AEROS 111 : Aerospace Defense, General Purpose, and Support Forces. (1:2:0)

WHEN TAUGHT: Winter

PREREQUISITE: Concurrent enrollment in Aeros 101.

DESCRIPTION: U.S. Air Force Major Command structure and the origins of the Air Force.

Course Outcomes
- Know the history of the Air Force, how it is organized and what it does for the country
- Know what career opportunities are available as an Air Force officer
- Know the benefits afforded members of the military
- Know and develop productive life skills
- Demonstrate basic oral and written communications skills

200-Level Courses

AEROS 200 : Leadership Laboratory--Sophomores. (.5:0:2)

WHEN TAUGHT: Fall

DESCRIPTION: As listed for Aeros 100/101. Increased emphasis on performance level.

Course Outcomes
- Know and apply basic military skills
- Know and apply basic field training skills
- Know and apply advanced field training skills
- Be physically fit

AEROS 201 : Leadership Laboratory--Sophomores. (.5:0:2)

WHEN TAUGHT: Winter

DESCRIPTION: As listed for Aeros 100/101. Increased emphasis on performance level.

Course Outcomes

- Know and apply basic field training skills
- Know and apply basic field training skills
- Know and apply advanced field training skills
- Be physically fit

AEROS 210 : The Developmental Growth of Air Power. (1:1:0)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Aeros 200.

DESCRIPTION: Development of various concepts of air power employment, emphasizing factors that have prompted research and technological change through the early 1960's.

Course Outcomes

- Know the key terms and definitions used to describe air and space power
- Comprehend the events, leaders, and technical developments that surrounded the evolution of USAF air and space power
- Demonstrate basic verbal and written communication skills
- Comprehend the Air Force Core Values and examples of their use throughout the evolution of USAF air and space power

AEROS 211 : The Developmental Growth of Air Power. (1:1:0)

WHEN TAUGHT: Winter

PREREQUISITE: Concurrent enrollment in Aeros 201.

DESCRIPTION: Development of various concepts of air power employment, emphasizing factors that have prompted research and technological change from Vietnam to the present.

Course Outcomes

There are no course outcomes available

300-Level Courses

AEROS 300 : Leadership Laboratory--Juniors. (.5:0:2)

WHEN TAUGHT: Fall

DESCRIPTION: As listed for Aeros 100/101. Students perform as cadet officers. Emphasis on leadership development.

Course Outcomes

- Know and apply basic military skills
- Know and apply basic filed training skills
- Know and apply advanced field training skills
- Be physically fit

AEROS 301 : Leadership Laboratory--Juniors. (.5:0:2)

WHEN TAUGHT: Winter

DESCRIPTION: As listed for Aeros 100/101. Students perform as cadet officers. Emphasis on leadership development.

Course Outcomes

- Know and apply Basic Military Skills.
- Know and apply Basic Field Training Skills.
- Know and apply Advanced Field Training Skills.
- Be physically fit.

AEROS 305R : Leadership Laboratory--Honor Guard. (2:2.0:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Instructor's consent.

DESCRIPTION: Fundamentals of military leadership and M-1 rifle drill; emphasizes need for response to vested authority, with opportunity to develop confidence, military bearing, and other interpersonal skills; students perform as cadet leaders.

Course Outcomes

- Know and apply basic military skills
- Know and apply Air Force traditions, ceremonies and customs

AEROS 310 : Management and Leadership. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Aeros 300.

DESCRIPTION: Writing, speaking, and listening as communication skills; management concepts; responsibilities and ethics for an Air Force junior officer.

Course Outcomes

- Define the concept of leadership
- Explain the relationship between leadership and management
- Explain the ways of determining leadership effectiveness
- Identify the major research theories of leadership and its processes
- Explain the interactional framework of leadership

AEROS 311 : Management and Leadership. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Concurrent enrollment in Aeros 301.

DESCRIPTION: Principles of leadership, problem solving, decisions, discipline, and human relations. Emphasis on career planning as an Air Force junior officer.

Course Outcomes

- Define the concept of leadership.
- Explain the relationship between leadership and management.
- Explain the ways of determining leadership effectiveness.
- Identify the major research theories of leadership and its processes.
- Explain the Interactional Framework of Leadership.

AEROS 399R : Academic Internship: Leadership Intern Program. (4:0:0)

WHEN TAUGHT: Spring; Summer

PREREQUISITE: Department chair's consent.

DESCRIPTION: Air Force ROTC field leadership training course. Provides advanced fundamentals of military leadership, planning, organizing, and team building at various levels of responsibility.

NOTE: Enrollment limited to Air Force ROTC cadets.

Course Outcomes

- Understand and implement in theoretical situations Air Force core values
- Explain Air Force leadership principles
- Recognize the traits and methods of effective leadership in the military

400-Level Courses

AEROS 400R : Leadership Laboratory--Seniors. (.5:0:2)

WHEN TAUGHT: Fall

DESCRIPTION: As listed for Aeros 100/101. Senior cadets perform in leadership positions in planning and conducting all activities of the cadet corps.

Course Outcomes

- Know and apply basic military skills
- Know and apply basic field training skills
- Know and apply advanced field training skills
- Be physically fit

AEROS 401R : Leadership Laboratory--Seniors. (.5:0:2)

WHEN TAUGHT: Winter

DESCRIPTION: As listed for Aeros 100/101. Senior cadets perform in leadership positions in planning and conducting all activities of the cadet corps.

Course Outcomes

- Know and apply basic military skills
- Know and apply basic field training skills
- Know and apply advanced field training skills
- Be physically fit

AEROS 410 : National Security Affairs. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Aeros 400R.

DESCRIPTION: Civilian control of military, civil-military interaction, the forming of defense strategy. Military profession; Russia, Europe, and East Asia regional studies.

Course Outcomes

- Know the basic elements of national security policy and process
- Know the air and space power functions and capabilities
- Understand selected roles of the military in society
- Understand current issues affecting the military profession
- Understand the military justice system
- Comprehend the responsibility, authority, and functions of an Air Force commander
- Apply listening, speaking, and writing skills in Air Force particular formats and situations with accuracy, clarity, and appropriate style
- Understand the factors that facilitate a smooth transition from civilian to military life

AEROS 411 : National Security Affairs. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Concurrent enrollment in Aeros 401R.

DESCRIPTION: Africa, Middle East, and Latin American regional studies; military operation other than war; military justice system; officer professional development.

Course Outcomes

- Be able to explain the basic elements of national security policy and process.
- Know the air and space power functions and capabilities.
- Differentiate between selected roles of the military in society.

- Improving written and oral communication skills through written case assignments and in-class presentations.

BUS M 461 : Operations Analytics. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: BUS M 361; Major status.

DESCRIPTION: Methods and tools necessary for analyzing and solving problems associated with global supply chain management.

Course Outcomes

There are no course outcomes available

BUS M 462 : Services Management. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: BUS M 361; Major status.

DESCRIPTION: Management principles and characteristics of service industries and service aspects of supply chains: sources of strategic advantage; process analysis and tools; quality.

Course Outcomes

- Learn principles that lead to successful services management.
- Understand analytical frameworks that provide rigor to your study of services.
- Apply service principles and analytical frameworks to actual business situations.
- Complete an enrichment project that demonstrates your ability to use your knowledge in making significant business decisions.

BUS M 463 : Quality Management. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: BUS M 361; Major status.

DESCRIPTION: Concepts of quality management, strategic issues, philosophies, and tools such as Six Sigma and SQC used to control quality.

Course Outcomes

- Understand how to implement quality tools and concepts in a supply chain.
- Apply a contingency theoretic approach in recommending solutions to quality problems.
- Develop basic control charts in Excel.
- Apply basic quality tools to specific quality challenges.

BUS M 465 : Global Supply Chain. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: BUS M 361; Major status.

DESCRIPTION: The emerging rules of a global marketplace and their influence on key supply chain activities and processes.

Course Outcomes

There are no course outcomes available

BUS M 466 : Purchasing and Supply Management. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: BUS M 361; Major status.

DESCRIPTION: Focuses on upstream supply chain activities of supplier selection, management, and development. Negotiation, costing, product development, and commodity analysis.

Course Outcomes

- Be able to create and utilize a commodity plan.
- Understand direct and indirect costs, fixed, step, and variable costs, target costs, and various ways to perform cost analyses.
- Describe the ethical and professional standards expected among supply management professionals.

BUS M 468 : Supply Chain Logistics. (3:3.0:0.0)

WHEN TAUGHT: Winter

PREREQUISITE: BUS M 361; Major status.

DESCRIPTION: Integration of materials management (inbound transportation), physical distribution (outbound transportation), inventory, warehousing, facility location, customer service, packaging, and materials handling.

Course Outcomes

- Be able to discuss the general principles and concerns of Warehouse and Distribution management.
- Be able to discuss the general principles and concerns of Transportation Management.
- Be familiar with the documentation required for domestic and international shipping.
- Be familiar with miscellaneous logistics concepts including, global logistics, humanitarian logistics, and sustainability.

BUS M 469 : Global Supply Chain Strategy. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: BUS M 361; Major status.

DESCRIPTION: Integrative and creative problem solving in designing and managing cohesive value-added conversion/transformation systems in a global environment.

Course Outcomes
- Demonstrate anxious engagement, as an individual and as a member of a team.
- Learn how to take good risks.
- Demonstrate persuasive communication skills.
- Increase knowledge of Supply Chain theory, strategy, and practice.

BUS M 470 : Entrepreneurial Innovation. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Major status.

DESCRIPTION: Finding and validating ideas for innovative new ventures with a focus on customer pain, elegant solutions, and markets.

Course Outcomes
There are no course outcomes available

BUS M 471 : Creating New Ventures. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: BUS M 470

DESCRIPTION: Learning the critical skills to create a successful new venture by validating an initial idea and business model in the field.

Course Outcomes
There are no course outcomes available

BUS M 472 : Entrepreneurial Marketing. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: BUS M 341; or BUS M 241; Major status.

DESCRIPTION: Marketing strategies for start-up companies. Topics include marketing to investors, internal marketing, and how to market products/services without a marketing budget.

Course Outcomes
- Exhibit knowledge of basic entrepreneurial marketing skills—learn how to make "competitive angles" that make competitors irrelevant.
- Be able to introduce new products and formulate marketing tactics for startup companies on a limited budget.
- Develop the mindset and qualitative and quantitative skills to effectively become a marketing consultant for startup firms.

BUS M 475 : Financing New Ventures. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Business management core; major status.

DESCRIPTION: Concepts and skills of entrepreneurship, emphasizing how new and emerging companies are financed. Applying functional tools to case situations.

Course Outcomes
- Apply the entrepreneurial perspective to make better decisions in analyzing or creating a business venture.
- Apply effective entrepreneurial and general management practices from the perspectives of the founder and vital stakeholders.
- Analyze business opportunities and develop them into investment grade businesses.

BUS M 476 : New Venture LaunchPad. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Major status.

DESCRIPTION: Launching actual new ventures. Mentored learning of idea validation, business models, minimum viable products, and financing plans. Good preparations for participating in BYU's entrepreneurial competitions.

Course Outcomes
There are no course outcomes available

BUS M 480 : Strategy 1. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Major status.

DESCRIPTION: Structured problem solving, strategic thinking, and basic strategy concepts to prepare students to analyze and understand the sources of competitive advantage and superior firm performance.

Course Outcomes
- Recall, explain, and give examples of the major elements of strategy and the drivers of competitive advantage.
- Apply analytical models to complex business situations and generate strategic recommendations.
- Critically analyze the external and internal environments of a business organization and formulate appropriate strategies.
- Demonstrate problem solving skills by developing hypotheses about the effect of data analysis on strategic decisions.
- Demonstrate team skills through active participation in group projects and the assumption and exercise of

responsibility in a collaborative mode.
- Communicate effectively, both orally and in writing, concerning strategy concepts, models, and analyses.

BUS M 481 : Strategy 2. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: BUS M 480

DESCRIPTION: Advanced strategy topics such as growth and diversification strategy, pricing strategy, game theory and competitor analysis, strategy as real options, and strategic flexibility and commitment.

Course Outcomes
- Appreciate the complexity, nuance, and differences across contexts in strategic situations
- Develop creative analytical approaches to test hypotheses in strategic settings
- Understand competitive, especially Schumpetterian and evolutionary, dynamics
- Develop effective strategy for firms through competent analysis and logic
- Learn to develop "CEO-ready" strategy presentations and effectively express points of view on complex cases
- Demonstrate collaborative and participatory skills

BUS M 482 : Strategy Implementation. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: BUS M 481

DESCRIPTION: Integrative course on strategy formulation and implementation, including a field study. Topics include organizational alignment (structure and processes that fit the stragety), change management, and strategic leadership.

Course Outcomes
- To provide an opportunity for you to combine the analytical output of several of these tools and synthesize a holistic view of a larger business problem through a personal paper and an end of semester in-depth project.

BUS M 483R : Topics in Strategy. (3:3:0)

PREREQUISITE: Major status.

DESCRIPTION: Topics and instructors vary.

Course Outcomes
No outcomes are available at this time.

BUS M 488 : Agribusiness Management 1. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: ACC 200 & BUS M 201 & ECON 110; or ACC 200 & FIN 201 & ECON 110

DESCRIPTION: Concepts, tools, and approaches to understanding competitive forces and the development of sustainable competitive advantage for firms in the food, fiber, and horticulture industries.

Course Outcomes
- Understand the concepts and models of strategic management presented in the course.
- Appreciate the roles, responsibilities, and potential influence of business leaders.
- Further develop the personal sense of ethics and integrity that guide decision making in business, community, church, and family relationships.
- Analyze the competitive situation facing a firm using the models of strategic management presented in class.
- Apply the models of strategic management presented in the course to arrive at recommendations that will help organizations achieve and sustain competitive advantage.
- Persuasively communicate analytical conclusions and recommendations in verbal and written form.
- Effectively participate in group work.

BUS M 489 : Agribusiness Management 2. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: ACC 200 & BUS M 201 & ECON 110; or ACC 200 & FIN 201 & ECON 110

DESCRIPTION: Developing and implementing marketing plans and programs for companies participating in the value chain of agribusiness industries.

Course Outcomes
- Students will understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers in life sciences industries.
- Describe how life sciences firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Students will understand the basics of the market research process.
- Students will study current marketing techniques in life sciences-based industries.
- Students will learn to apply faith-based, moral reasoning and personal integrity in professional life.
- Students will learn to work effectively within a team and to communicate effectively in business environments.

BUS M 490R : Topics in Business Management. (.5-3:Arr:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Current business-related topics varying by semester and section.

Course Outcomes
There are no course outcomes available

BUS M 491R : Social Innovation Projects. (1-3:Arr.:Arr.)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Instructor's consent.

DESCRIPTION: Direct, practical on-campus (not in the field) and off-campus experience consulting with established and recognized social innovators and their social ventures. Students are accepted to work on specific projects based on their skills. Students apply to be involved in specific projects. Credit offered will depending upon the project's scope and intensity.

Course Outcomes

- Demonstrate an understanding and appreciation of the social innovation and social entrepreneurship environment and ecosystem.Demonstrate ability to analyze and contribute to organizational and managerial success as assigned by the consulting organization.
- Demonstrate appropriate project, organizational, and managerial professionalism through responsible actions, deadline completion, and final project completion.
- Demonstrate ethical behavior in team effort and with project provider.
- Demonstrate ability to be an effective team member and contribute to overall team success.

BUS M 494R : On-Campus Experiential Projects. (3:1:Arr)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Direct, practical on-campus (not in the field) professional experience consulting with established and startup companies and organizations. Students are accepted to work on specific projects based on their skills, interests, and major emphasis. Students apply to be involved in specific projects.

Course Outcomes

- Demonstrate proficiency in analyzing management problems, developing solutions, and implementing recommendations as assigned by the sponsoring organization.
- Demonstrate appropriate managerial professionalism through responsible actions, thorough analysis, and meeting deadlines.
- Demonstrate ethical behavior in completing assigned tasks and responsibilities.

BUS M 495R : E-Business Projects. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Instructor's consent.

DESCRIPTION: Consulting/Field studies projects in e-business.

Course Outcomes

- Demonstrate proficiency in analyzing management problems, developing solutions, and implementing recommendations as assigned by the sponsoring organization.
- Demonstrate appropriate managerial professionalism through responsible actions, thorough analysis, and meeting deadlines.
- Demonstrate ethical behavior in completing assigned tasks and responsibilities.

BUS M 496R : Academic Internship. (1-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Consent of internship coordinator.

DESCRIPTION: Supervised experience for business majors either in service or business-related work. Opportunity to link learning with practical field applications.

Course Outcomes

- Demonstrate proficiency in analyzing management problems, developing solutions, and implementing recommendations as assigned by the sponsoring organization.
- Demonstrate appropriate managerial professionalism through responsible actions, thorough analysis, and meeting deadlines.
- Demonstrate ethical behavior in completing assigned tasks and responsibilities.

BUS M 498 : Strategic Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Major status; Management Integrated Core.

DESCRIPTION: Concepts, tools, and approaches to understand competitive forces and to systematically and consistently develop sustainable competitive advantages.

Course Outcomes

- Demonstrate knowledge of and ability to apply key strategic management concepts (strategy framework, external analysis [industry, competition, customers], resource & capabilities analysis, and strategies for growth and innovation).
- Utilize concepts to develop coherent strategic plans and recommendations for a business or organization.
- Demonstrate the ability to implement a coherent strategy by utilizing information from all business areas and functions (strategy, marketing, finance, accounting, operations, and HR) and making decisions in each of those areas.
- Use appropriate analytical, critical thinking, and creative problem solving skills when confronted with a business situation or problem.
- Demonstrate the ability to communicate orally and in writing regarding strategy topics in ways that meet the MCOM 320 criteria.
- Work effectively as a part of a team.

500-Level Graduate Courses (available to advanced undergraduates)

BUS M 509 : Communication in Professional Service Firms. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MAcc or MISM major status.

DESCRIPTION: Theory and application of written and oral communication for professional service firms.

Course Outcomes
There are no course outcomes available

BUS M 520 : Business Finance. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MAcc or MISM major status.

DESCRIPTION: Short-term financing of a business operation. Developing techniques for financial planning, such as analysis of ratios, profitability, and liquidity.

Course Outcomes
There are no course outcomes available

BUS M 530 : Operations Management. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MAcc or MISM major status.

DESCRIPTION: Examining issues and tools in production and operations management. Specific tools for forecasting, planning, inventory control, and project management presented and developed.

Course Outcomes
- Understand scope and importance of operating processes and decisions
- Master basic quantitative skills required to analyze operating processes
- Understand key constructs in quality management
- Understand link between operations and strategic management of the firm
- Develop the ability to develop a point of view about an operational challenge and argue persuasively for it in a professional setting

BUS M 538 : Managing Entrepreneurial Firms and Family Businesses. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Issues and problems facing managers of entrepreneurial enterprises and leaders of family-owned businesses. Includes start-up, growth, and exit strategies. Consulting project required.

Course Outcomes
- Describe the three systems of an entrepreneurial firm: Business, Family, and Governance
- Recommend specific ways to improve each of the systems of an entrepreneurial firm.
- Each student should be able to diagnose the problems that a family business and/or entrepreneurial firm has concerning the business, governance, and family systems.
- Be able to articulate recommendations to solve those problems.

BUS M 540 : Organizational Behavior. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MAcc or MISM major status.

DESCRIPTION: Analysis of individual, group, and organizational variables that inhibit or facilitate effective organizational functioning. Topics include motivation, rewards, leadership, conflict, decision making, structure, evaluation, and change.

Course Outcomes
- Articulate the factors that produce person-organization fit and explain how individual characteristics impact a person's fit with different organizations.
- Demonstrate a nuanced understanding of the behaviors that enhance personal effectiveness in organizations.
- Function effectively as a member and leader of a work group.
- Manage conflict by using power appropriately and negotiating effectively.
- Explain the principles of effective organizational change.

BUS M 550 : Marketing Management. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: MAcc or MISM major status.

DESCRIPTION: Development of analytical marketing tools and techniques; their utilization in case analysis and decision making in marketing management.

Course Outcomes
There are no course outcomes available

BUS M 571 : Entrepreneurial Perspective. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Developing awareness of and ability to apply existing knowledge about entrepreneurship to make better decisons when starting, growing, and harvesting business ventures.

Course Outcomes

No outcomes are available at this time.

BUS M 581 : Strategic Management. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MAcc or MISM major status.

DESCRIPTION: Top-management approach to problems of determining corporate strategy. Structured for accounting and information systems students.

Course Outcomes

- Recall, explain, and give examples of the major elements of strategy and the drivers of competitive advantage.
- Apply analytical models to complex business situations and generate strategic recommendations.
- Critically analyze the external and internal environments of a business organization and formulate appropriate strategies.
- Demonstrate problem solving skills by developing hypotheses about the effect of strategic decisions that lead to sensible conclusions.
- Make appropriate decisions when formulating and implementing strategy.
- Demonstrate team skills through active participation in group projects and the assumption and exercise of responsibility in a collaborative mode.
- Communicate effectively, both orally and in writing, concerning strategy concepts, models, and analyses.

BUS M 582 : Managerial Ethics. (3:3:0)

PREREQUISITE: Marriott School of Management graduate school status.

DESCRIPTION: Introduction to ethical theory and its application to managerial issues.

Course Outcomes

There are no course outcomes available

BUS M 596R : Business Language. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: For experienced speakers of the language being taught. Emphasizes business concepts; practice and case study including conversation, reading,and presenting, while enriching business vocabulary.

Course Outcomes

No outcomes are available at this time.

300-Level Courses

MANEC 300 : Economics of Market Systems. (3:3:0)

OFFERED: Independent Study also.
WHEN TAUGHT: Fall; Winter
PREREQUISITE: ECON 110; Major status.
DESCRIPTION: Decision making, price formation, and economic organization of the firm in market environments.

Course Outcomes
There are no course outcomes available

MANEC 358 : International Economics. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: ECON 110; Major status.
DESCRIPTION: International trade theory and issues, economic integration, trade and development, contemporary trade problems.

Course Outcomes

- Understand the basic theory and implicit assumptions of trade.
- Understand the politics and policies of global governance.
- Understand Foreign Exchange rates and their changes.
- Develop the skill of analyzing a country's position in the global economy.
- Attain an ability to read Financial reporting on the Global Economy.

MANEC 376 : Government and Business. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: ECON 110; Major status.
DESCRIPTION: Interaction of political and economic forces in determining product and asset prices and the distribution of income and wealth.

Admission to Degree Program

The degree program carries special enrollment limitations. Please see the Marriott School of Management Advisement Center for specific details.

The Discipline

The finance field deals with the control, management, and allocation of financial resources. Primary functions include project evaluation, asset allocation, security analysis, and cash flow estimation.

Career Opportunities

Finance careers can be divided into two primary areas: 1) corporate finance, which deals with the internal financial issues of a business firm, and 2) financial services, which focuses on solving financial problems for client firms. Finance is a high-demand, high-reward field with significant professional opportunities for motivated students.

Undergraduate Programs and Degrees

BS in Finance (Program Outcomes)

For help or information on the undergraduate program, please see the Marriott School of Management Advisement Center.

Program Requirements | View MAP | View Program Outcomes

1. No more than 12 semester hours of upper-division transfer credit will be accepted toward the major and only 6 hours beyond the Integrated Management Core. No transfer courses will be accepted for the Finance Junior Core or Integrated Management Core courses.

2. Complete the following prerequisite courses:

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.

DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

Course Outcomes

- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.
- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

BUS M 241 : Marketing Management. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Marketing's role in society and the firm, marketing opportunities, the consumer market, and management of marketing mix.

Course Outcomes

- Understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers.
- Describe how specific firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Design a marketing plan for a new venture by applying the appropriate tools and approaches studied

ECON 110 : Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
There are no course outcomes available

: Honors Economic Principles and Problems.

Course Outcomes

FIN 201 : Principles of Finance. (3:3:1.5)

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: Acc 200.
DESCRIPTION: Financial management from the viewpoint of the business manager emphasizing profitability, liquidity, and long-range financial planning.

Course Outcomes
There are no course outcomes available

IS 100 : Computer Spreadsheet Skills. (.5:0:1)
WHEN TAUGHT: Spring; Summer
DESCRIPTION: Basic computer skills, focusing on spreadsheet and database programs. No technical background necessary.

Course Outcomes
- Students will be able to construct an Excel Spreadsheet with appropriate formulas, functions, labels, charts, media inserts, hyperlinks, and data base functions – and output the report.

IS 102 : Business Analysis Using Spreadsheets. (.5:1:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: IS 100.
DESCRIPTION: Basic computer skills focusing on features in MS Excel such as Scenario Manager, Solver, Pivot Tables, and Macros to solve complex business problems.

Course Outcomes
- Build robust spreadsheet models of business problems to make rational, data-driven managerial recommendations effectively solving those problems.
- Manipulate spreadsheet models of business problems to examine the robustness of proposed solutions to those problems.
- Implement macro programming techniques for automating spreadsheets to create flexible and powerful spreadsheet models of business problems.

MATH 118 : Finite Mathematics. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 110.
DESCRIPTION: Language of set theory, counting and combinations. Probability theory, elementary stochastic processes, conditional probabilities. Repeated experiments, random variables, expectation, variance, linear equations, matrix algebra, application to economics or similar. Linear programming. Markov chains including applications.

Course Outcomes
- Prepares students for a broad range of applications in business, the life sciences, and the social sciences.For more detailed information visit the Math 118 Wiki page.

Note: Based on student performance to date, permission may be granted to take some restricted major-only courses.

3. Apply and be formally accepted into the program.
4. Complete the following required courses before the finance junior core:

MATH 116 : Essentials of Calculus. (1:2:0)
WHEN TAUGHT: Spring; Summer
PREREQUISITE: Math 110.
DESCRIPTION: Review of algebra, graph of line, slope. Limits and derivatives (standard functions, compositions of such functions), derivative for polynomials, exponentials, logarithms. Product, quotient and chain rule. Optimization (extrema), application to business problems. Newton's method.

Course Outcomes
- Students receive a brief overview of differential calculus. Topics covered include limits, derivatives, and applications of differentiation to optimization of functions.For more detailed information visit the Math 116 Wiki page.

STAT 121 : Principles of Statistics. (3:3:1)
OFFERED: Independent Study also; Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: MATH 110 or equivalent.
DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes
- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation

- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

5. Complete the following courses during your first year admitted to the major:

FIN 320 : Finance Career Orientation and Planning. (.5:1:0)

WHEN TAUGHT: Fall
PREREQUISITE: Acceptance into the Finance major.
DESCRIPTION: Student orientation and preparation for careers in finance.
NOTE: Must be taken first semester in Marriott School.

Course Outcomes
There are no course outcomes available

FIN 321 : Finance Mentor Program. (.5:0:0)

WHEN TAUGHT: Winter
PREREQUISITE: Acceptance into the Finance major.
DESCRIPTION: Discussions with outside finance mentors about career opportunities.
NOTE: Must be taken first semester in Marriott School.

Course Outcomes
There are no course outcomes available

6. Complete the following finance junior core courses in the junior year:

ACC 440 : Corporate Financial Reporting. (3:3:0)

PREREQUISITE: ACC 200 & BUS M 301; or ACC 200 & BUS M 201; or ACC 200 & FIN 201
DESCRIPTION: Accounting principles of corporate financial reporting. Judgments managers make preparing financial statement information. How complexities, alternatives, and impacts affect completed financial statements.
NOTE: For nonaccounting majors.

Course Outcomes
- Identify financial statement areas where managers can exercise significant judgment and identify how managers choices in these areas impact earnings reported in financial statements. Specific areas addressed include the following:Financial ForecastsPrimary Financial StatementsEarnings ManagementLeasesPensionsFinancial statement footnotesLong-lives AssetsInventory accountingIncome Taxes
- Demonstrate the proficiency to address CFA exam questions over the topic areas covered in this course.
- Apply ethical considerations to earnings management issues.

FIN 401 : Advanced Financial Management. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: Major status.
DESCRIPTION: Capital budgeting, cost of capital, capital structure/dividends, mergers and acquisitions, and current financial problems.

Course Outcomes
There are no course outcomes available

FIN 410 : Investments. (3:3:0)

WHEN TAUGHT: Fall
PREREQUISITE: BUS M 301; or FIN 201; Finance major status.
DESCRIPTION: Security markets, security analysis, and portfolio management.

Course Outcomes
There are no course outcomes available

FIN 411 : Financial Derivatives. (3:3:0)

WHEN TAUGHT: Winter
PREREQUISITE: FIN 410
DESCRIPTION: Current investment literature, efficient markets, modern portfolio theory, capital assets pricing, options pricing theory with a focus on derivatives and fixed income strategies.

Course Outcomes
There are no course outcomes available

FIN 453 : Money, Banking, and Business. (3:3:0)

WHEN Fall

TAUGHT:
PREREQUISITE: Major status.
DESCRIPTION: Economic analysis of effects of money, banking, and financial institutions on business decisions and aggregate economic activity.

Course Outcomes
There are no course outcomes available

7. During the senior year, complete one additional finance elective course from the following:

FIN 413 : Real Estate Finance and Investment. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: BUS M 401 & ACC 440; or FIN 401 & ACC 440; Finance junior core.
DESCRIPTION: Terminology, concepts, principles, and analytical techniques related to financing of and investment in real estate.

Course Outcomes
There are no course outcomes available

FIN 415 : Portfolio Management. (1.5:1:2)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: BUS M 409; or FIN 409
DESCRIPTION: Team management of actual investment portfolio. Responsibility for economic forecasts, security selection, and portfolio strategy

Course Outcomes
There are no course outcomes available

FIN 417 : Analysis for Investment Bankers. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: Finance junior core.
DESCRIPTION: Exploring the skills used by investment bankers including industry analysis, financial statement analysis, and valuation; the underwriting issues such as security characteristics, embedded options, swaps, convertibles, and other hybrid securities.

Course Outcomes
There are no course outcomes available

FIN 432 : International Corporate Finance. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: BUS M 401 & ACC 440; or FIN 401 & ACC 440; Finance junior core.
DESCRIPTION: Financial aspects of multinational corporations operating within an international environment; direct foreign investment, foreign exchange regulations, capital markets, etc.

Course Outcomes
There are no course outcomes available

Note: If FIN 415 is chosen, it must be taken for 1.5 credits in Fall and 1.5 credits in Winter.

8. Complete the following Integrated Management Core courses:

BUS M 361 : Introduction to Supply Chain and Operations. (3:3:0)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Acceptance into the Marriott School.
DESCRIPTION: Managing and designing processes and people along the value chain.

Course Outcomes
There are no course outcomes available

BUS M 387 : Economics of Strategy. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: Major or strategy minor status.
DESCRIPTION: Economic tools influencing the success of strategy (creation and appropriation of value) emphasizing application of economic theory to management of practice.

Course Outcomes
- Develop strategic reasoning ability.
- Develop competent understanding of competitive environments, competitive rivalry, cost, entry, and demand and supply.
- Demonstrate team skills through active participation in group discussions and projects and the assumption and exercise of responsibility in a collaborative mode.
- Acquire skill in applying the tools of economic analysis to management problems.

BUS M 390 : Ethics for Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Premanagement and Management 1 cores and full acceptance into the Marriott School upper-division major.

DESCRIPTION: Analyzing ethical dilemmas and understanding ethical theories as they apply to decision making in management.

Course Outcomes

- Identify and address common ethical issues that arise for individuals, managers, and organizations.
- Use contemporary and classic frameworks to analyze and suggest resolutions to ethical dilemmas.
- Recognize how individual differences and cognitive barriers can influence ethical judgment.
- Identify key organizational tools, policies, systems, and laws that apply to managing ethical conduct.
- Identify and prioritize personal values and apply those to making ethical decisions.

ORG B 321 : Organizational Effectiveness. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

PREREQUISITE: For Marriott School of Management majors only.

DESCRIPTION: Theories and concepts for creating effective organizations, e.g., individual, group, and organizational processes and human resource functions, including selection, compensation, and performance management.

Course Outcomes

- Students will know how to explain and discuss the characteristics of an effective organization and how to create them, how to attract and train an effective workforce, how to motivate employees to accomlish the organization's goals, and how to create a productive work environment.
- Students will be able to effectively work in a team.
- The students will learn how to manage change effectively.

9. Complete the following courses:

ACC 241 : Business Law in the Environment. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Marriott School of Management major status.

DESCRIPTION: Introduction to legal principles and institutions affecting business.

Course Outcomes

- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for the following topics: sources of law, courts and their procedures, jurisdiction, crimes, and torts.
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for: contract formation, defects in agreement, the statute of frauds and the parole evidence rule, third party rights, and breach/remedies.
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for: agency formation and termination, partnerships, LLC's, and corporate formation and operation.
- Apply ethical principles to legal problems.

IS 201 : Introduction to Management Information Systems. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: IS 100 and IS 102.

DESCRIPTION: Using technology to solve business problems. Hands-on spreadsheet, database, and Internet software in a business context.

Course Outcomes

- Manipulate and analyze data to make appropriate recommendations for managerial decision-making.
- Design, build, and query a database to apply correct principles of data storage and extraction.
- Develop effective personal computer and Internet search skills.

M COM 320 : Communication in Organizational Settings. (3:3:1)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: GE First-Year Writing requirement. To be taken before senior year. Not for freshmen.

DESCRIPTION: Developing written and oral communications for professional organizations, including composing and designing employment communications. Incorporates oral presentations.

NOTE: Fulfills GE Advanced Written and Oral Communication requirement.

Course Outcomes

- Compose various commonly occurring business texts, achieving effectiveness in design, organization, content, and style.
- Demonstrate knowledge of generally accepted grammar standards (from Writing & Speaking for Business).
- Give effective oral presentations with appropriate visual support, achieving effectiveness in message, media, and messenger.
- Create effective business graphics and implement effective visual-design principles.

: Honors Communication in Organizational Settings.

Course Outcomes

10. Complete one course from the following:

BUS M 371R : Entrepreneurship Lecture Series. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Lectures by successful entrepreneurs on subjects significant to entrepreneur-type opportunities.

Course Outcomes

- Recognize and resolve ethical challenges and choices in specific organizational contexts.
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life

BUS M 380 : Executive Lectures. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: Lectures by top executives on subjects significant to executive leadership.

Course Outcomes

- Recognize and resolve ethical challenges and choices in specific organizational contexts.
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life.

BUS M 382 : Financial Services Lecture Series. (1:1:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Lectures by executives on financial services topics.

Course Outcomes

- · Recognize and resolve the typical ethical challenges that confront people working in financial services
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life.
- Understand the major career pathways that can be pursued with academic training in finance.

11. Complete the following after the Integrated Management Core:

BUS M 498 : Strategic Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Major status; Management Integrated Core.

DESCRIPTION: Concepts, tools, and approaches to understand competitive forces and to systematically and consistently develop sustainable competitive advantages.

Course Outcomes

- Demonstrate knowledge of and ability to apply key strategic management concepts (strategy framework, external analysis [industry, competition, customers], resource & capabilities analysis, and strategies for growth and innovation).
- Utilize concepts to develop coherent strategic plans and recommendations for a business or organization.
- Demonstrate the ability to implement a coherent strategy by utilizing information from all business areas and functions (strategy, marketing, finance, accounting, operations, and HR) and making decisions in each of those areas.
- Use appropriate analytical, critical thinking, and creative problem solving skills when confronted with a business situation or problem.
- Demonstrate the ability to communicate orally and in writing regarding strategy topics in ways that meet the MCOM 320 criteria.
- Work effectively as a part of a team.

12. Complete Marriott School exit survey online.

*Hours include courses that may fulfill university core requirements.

Admission to Degree Program

The degree program in the department carries special enrollment limitations. Please see the Marriott School of Management Advisement Center for specific details.

The Discipline

Computer-based information systems have become a critical part of the products, services, operations, and management of all organizations. The effective and efficient use of information and communications technologies is an important element in achieving competitive advantage for business organizations as well as achieving excellence in service for government and non-profit organizations. The twenty-first century has seen the rapid growth of the Internet, eCommerce, and purely electronic enterprises. These organizations would not even exist without the technology provided by computer-based information systems. The importance of information systems to organizations and the need for well-educated professionals in the field is the basis for strong educational programs and the development of a professional community of information systems (IS) practitioners.

Information systems involves two broad areas: (1) the acquisition, deployment, and management of an organization's information systems resources and services and (2) the development of computer-based systems and technology infrastructures for use in organization processes. Information systems professionals provide services ranging from the managerial to the highly technical. Information systems and technology skills are critical to the success of virtually all modern organizations, including small business, corporations, government, and educational institutions.

Career Opportunities

Information systems graduates work in large and small organizations of all types, helping maintain existing technology infrastructure and specifying technology solutions to business needs. They serve as the bridge between an organization's technical personnel and its business side. Well-educated information systems graduates are in high demand in accounting firms, consulting firms, large corporations, midsized companies, technical companies, government agencies, and smaller entrepreneurial concerns. Challenging career opportunities embrace a wide range of interests. The variety of employment prospects includes opportunities for everyone from those who are primarily interested in people and organizations to those who enjoy very technical activities such as database and network administration or software development.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

Undergraduate Programs and Degrees

BS in Information Systems (Program Outcomes)

For help or information on the undergraduate program, please see the Marriott School of Management Advisement Center or visit http://isd.byu.edu.

For information on management degrees, see the Management section of this catalog.

Graduate Programs and Degrees

MISM in Information Systems Management

For more information see the current website for the Master of Information Systems Management program at http://mism.byu.edu and the BYU 2013–2014 Graduate Catalog.

General Information

Undergraduate Application Requirements

Admitted applicants to the information systems program begin major coursework each fall semester. The following items are taken into consideration for all applicants during the admission process:

1. Average GPA of prerequisite courses and cumulative GPA.
2. Review of academic transcript.
3. Applicant essay.
4. Comments from Information Systems professors.

Application Guidelines

Beginning Fall 2012:

1. Completion of the following prerequisite courses: IS 100, IS 102, IS 201, IS 303 (or CS 142), ACC 200, BUS M 201, and BUS M 241. **Note**: A minimum 3.0 average GPA in the prerequisite courses is required, with no less than a B grade in IS 201 and IS 303 (or CS 142).
2. Repeating courses to improve a grade is strongly discouraged. Repeated and transfer courses are discounted 0.3 of a grade for admission purposes only (e.g. an A- grade would be discounted to a B+ during the admission process).
3. Completion and submission of the online application, including the applicant essay. The deadline to submit the application is the last working day of June at 4:30 pm.
4. Meeting or exceeding admission criteria does not guarantee admission. The Information Systems Department reserves the right to make exceptions to admission policies as deemed necessary to admit the most qualified applicants.

This is a limited-enrollment program requiring departmental acceptance. Please see the college advisement center for information regarding requirements for application to this major.

Program Requirements | View MAP | View Program Outcomes

1. No more than 12 semester hours of upper-division transfer credit will be accepted toward the major and only 6 hours beyond the Pre-Systems Core.
2. Students are encouraged to enroll in courses outside the Marriott School of Management. Only 50 upper-division Marriott School hours count toward graduation.
3. Pass a computer proficiency requirement for spreadsheet skills. Students may demonstrate spreadsheet skills either by earning a Pass grade in IS 100 and 102 or a B grade in equivalent transfer courses. The IS 100 course requirement (but NOT IS 102) may also be fulfilled by presenting Microsoft Office certification (either MOS or MCAS) validating core-level competency in MS Excel.
4. Complete the following prerequisite courses:

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.

DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

Course Outcomes

- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.
- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

FIN 201 : Principles of Finance. (3:3:1.5)

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: Acc 200.

DESCRIPTION: Financial management from the viewpoint of the business manager emphasizing profitability, liquidity, and long-range financial planning.

Course Outcomes

There are no course outcomes available

BUS M 241 : Marketing Management. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Marketing's role in society and the firm, marketing opportunities, the consumer market, and management of marketing mix.

Course Outcomes

- Understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers.
- Describe how specific firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Design a marketing plan for a new venture by applying the appropriate tools and approaches studied

IS 100 : Computer Spreadsheet Skills. (.5:0:1)

WHEN TAUGHT: Spring; Summer

DESCRIPTION: Basic computer skills, focusing on spreadsheet and database programs. No technical background necessary.

Course Outcomes
- Students will be able to construct an Excel Spreadsheet with appropriate formulas, functions, labels, charts, media inserts, hyperlinks, and data base functions – and output the report.

IS 102 : Business Analysis Using Spreadsheets. (.5:1:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: IS 100.

DESCRIPTION: Basic computer skills focusing on features in MS Excel such as Scenario Manager, Solver, Pivot Tables, and Macros to solve complex business problems.

Course Outcomes
- Build robust spreadsheet models of business problems to make rational, data-driven managerial recommendations effectively solving those problems.
- Manipulate spreadsheet models of business problems to examine the robustness of proposed solutions to those problems.
- Implement macro programming techniques for automating spreadsheets to create flexible and powerful spreadsheet models of business problems.

IS 201 : Introduction to Management Information Systems. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: IS 100 and IS 102.

DESCRIPTION: Using technology to solve business problems. Hands-on spreadsheet, database, and Internet software in a business context.

Course Outcomes
- Manipulate and analyze data to make appropriate recommendations for managerial decision-making.
- Design, build, and query a database to apply correct principles of data storage and extraction.
- Develop effective personal computer and Internet search skills.

IS 303 : Introduction to Computer Programming. (3:3:0)

WHEN TAUGHT: Winter; Spring

DESCRIPTION: Object-oriented program design and development. Principles of algorithm formulation and implementation.

Course Outcomes
- Master essential programming concepts and Java syntax.
- Develop critical thinking skills through using programming logic to solve business processing problems.
- Written communication: Learn the standard syntax for Java programs.

Note: The Pre-Information Systems Core must be completed with at least a 3.0 GPA (a grade of B or better is required in IS 201 and IS 303), with no more than one repeat for each course. Repeated and transfer courses will be discounted 0.3 of a grade during the admissions process. Meeting or exceeding admission criteria does not guarantee admission.

5. Apply and be formally accepted into the program.

6. Complete the following required courses:

ACC 241 : Business Law in the Environment. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Marriott School of Management major status.

DESCRIPTION: Introduction to legal principles and institutions affecting business.

Course Outcomes
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for the following topics: sources of law, courts and their procedures, jurisdiction, crimes, and torts.
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for: contract formation, defects in agreement, the statute of frauds and the parole evidence rule, third party rights, and breach/remedies.
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for: agency formation and termination, partnerships, LLC's, and corporate formation and operation.
- Apply ethical principles to legal problems.

ECON 110 : Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

: Honors Economic Principles and Problems.

Course Outcomes

M COM 320 : Communication in Organizational Settings. (3:3:1)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: GE First-Year Writing requirement. To be taken before senior year. Not for freshmen.

DESCRIPTION: Developing written and oral communications for professional organizations, including composing and designing employment communications. Incorporates oral presentations.

NOTE: Fulfills GE Advanced Written and Oral Communication requirement.

Course Outcomes

- Compose various commonly occurring business texts, achieving effectiveness in design, organization, content, and style.
- Demonstrate knowledge of generally accepted grammar standards (from Writing & Speaking for Business).
- Give effective oral presentations with appropriate visual support, achieving effectiveness in message, media, and messenger.
- Create effective business graphics and implement effective visual-design principles.

: Honors Communication in Organizational Settings.

Course Outcomes

7. Complete the following Information Systems Junior Core 1 courses (taught fall only):

IS 401 : Systems Analysis. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Admission to information systems major, concurrent enrollment in same section of IS 402, 403, and 414.

DESCRIPTION: Early phases of systems development life cycle, including project management, planning, investigation, requirements definition, systems specifications, alternative selection. Tools and techniques of object-oriented analysis.

Course Outcomes

- Learn to work in groups and be part of an effective team. Demonstrate your skills by delivering a semester-long systems analysis and design project, followed by a week-long, intensive integrative exercise.
- Learn to communicate effectively, both orally and in writing. Learn the standard symbols and notation for expressing systems as UML diagrams. Learn to make a professional presentation to management regarding the artifacts you produce.
- Develop a sense of ethical values that translate into the business community, especially with regard to the ethics expected of an information systems professional.
- Course content: Master the essential subject matter of object-oriented systems analysis and design.
- Further your technology skills by learning to use tools that support the fundamental tasks of a systems analyst. This semester we will use a new online collaborative diagramming tool, LucidChart, to create UML diagrams. We will also learn to use Microsoft products such as Visio and Project.

IS 402 : Database Systems. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Admission to information systems major; concurrent enrollment in same section of IS 401, 403, and 414.

DESCRIPTION: Concepts and techniques of database system development, focusing on object-oriented modeling and its implementation methods.

Course Outcomes

- Master essential database concepts.
- Develop critical thinking skills through producing conceptual data models and solving relational algebra and SQL query problems.
- Learn the standard symbols and notation for data modeling and relational database design. Demonstrate this knowledge in conceptual and relational data models.
- Learn to work well with one or more partners on a major data modeling assignment. On a larger team, complete a major project in the integrative exercise (INTEX).

IS 403 : Principles of Business Programming. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Admission to information systems major; concurrent enrollment in same section of IS 401, 402, and 414.

DESCRIPTION: Programming business systems. Algorithms, data structures, programming patterns, and interfaces.

Course Outcomes

- Read current events and think critically about them as an IS professional. You'll be given a weekly quiz on current events, and we'll routinely discuss them in class.
- Create clear and elegant programs to solve IS problems. As the primary programming class in the Information Systems program, you'll practice your programming skills this semester. We'll focus on efficient, clear, and elegant solutions to the problems.
- Become proficient in using Internet resources to solve development problems. One of the most

important skills in Information Systems is knowing how to find solutions in Internet groups, discussion boards, blogs, tutorials, and other online documentation sources. We'll practice this skill throughout the semester.
- Learn object-oriented programming principles, data structures, and libraries. The subject matter of the course is object-oriented programming in the Java language. Java is an excellent teaching/learning language because it's compiler is picky and its language constructs are common in many other languages.
- Understand how to read and effectively use technical documentation. We'll explore the Javadoc documentation for the Java libraries.

IS 414 : Business Processes and Controls. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Information systems majors status; concurrent enrollment in same section of IS 401, 402, and 403.

RECOMMENDED: Acc 210.

DESCRIPTION: Enterprise-level systems that support basic business processes, information systems control and security issues, systems integration and deployment.

Course Outcomes
- Analyze a set of business processes and report control deficiencies -- Evaluated through a cycle report, homework, quizzes, and exams.
- Evaluate the appropriateness of various controls -- Evaluated through homework, quizzes, and exams.
- Communicate effectively both in writing and in presentations -- Evaluated through the cycle report.

8. Complete the following Information Systems Junior Core 2 courses (taught winter only):

IS 404 : Data Communications. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Admission to information systems major; concurrent enrollment in same section of IS 411, 413, and 415.

DESCRIPTION: Principles of data communications, local- and wide-area networks, hardware, software, media, standards, management, and business applications.

Course Outcomes
- Develop an understanding of data communications and network systems in general and specifically be able to:Set up and configure basic network components including systems and firewalls.Understand basic protocols in TCP/IP network stack.Understand and be able to setup and configure basic network services.
- Ability to solve specific problems using their understanding gained during the course.
- Converse competently with IT professionals who specialize in data communications. Understand and debate current data communications issues.

IS 411 : Systems Design and Implementation. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: IS 401 & IS 402 & IS 403

DESCRIPTION: Later phases of systems development life cycle. System architecture, user interfaces, system interface, and application design. Testing and integration. Object-oriented development.

Course Outcomes
- Master essential system design concepts and patterns.
- Develop critical thinking skills through producing sound system designs to solve specific business systems processing problems.
- Learn the standard UML symbols and notation for system design.
- Learn to work well as a member and leader of a team in developing designs on multiple projects.

IS 413 : Enterprise Application Development. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: IS 401 & IS 402 & IS 403

DESCRIPTION: Client- and server-side programming. Internet and Web-based applications. Enterprise systems and architectures.

Course Outcomes
- Read current events and think critically about them as an IS professional. You'll be given a weekly quiz on current events, and we'll routinely discuss them in class.
- Learn to develop information systems within group settings. The entire semester is based around INTEX II, an intense, group project. You'll need to develop a complex information system clear through implementation and testing.
- Work as leaders and as group members in development teams. You should have opportunity during the semester to work as leader of your team as well as a regular group member. For each phase of the project, pick a leader who will make sure things happen as they should.
- Develop time management expertise within intense development projects. The project this semester will be intense--just like projects are in the real world. The semester will give you a chance to further develop your time management skills.
- Learn enterprise system development principles and patterns. We'll use best practices models and methods of enterprise development, such as business objects, data layers, and object-relational mappings to develop the project.

IS 415 : Information Systems Capstone Project. (3:3:0)

WHEN Winter

TAUGHT:
PREREQUISITE: IS 401 & IS 402 & IS 403
DESCRIPTION: Applying concepts, principles, and methods of enterprise-level information systems by designing and developing a full-scale system including hardware, software, and network.

Course Outcomes
- Master essential analysis, design, and programming concepts.
- Develop critical thinking skills through solving project problems individually and with a group.
- Produce project and system documentation at technical and management levels.
- Learn to work well as a member of a team in developing a functioning business processing system.

9. Complete the following Integrated Management Core courses:

BUS M 361 : Introduction to Supply Chain and Operations. (3:3:0)
WHEN TAUGHT: Fall; Winter; Summer
PREREQUISITE: Acceptance into the Marriott School.
DESCRIPTION: Managing and designing processes and people along the value chain.

Course Outcomes
There are no course outcomes available

BUS M 390 : Ethics for Management. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Premanagement and Management 1 cores and full acceptance into the Marriott School upper-division major.
DESCRIPTION: Analyzing ethical dilemmas and understanding ethical theories as they apply to decision making in management.

Course Outcomes
- Identify and address common ethical issues that arise for individuals, managers, and organizations.
- Use contemporary and classic frameworks to analyze and suggest resolutions to ethical dilemmas.
- Recognize how individual differences and cognitive barriers can influence ethical judgment.
- Identify key organizational tools, policies, systems, and laws that apply to managing ethical conduct.
- Identify and prioritize personal values and apply those to making ethical decisions.

BUS M 387 : Economics of Strategy. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: Major or strategy minor status.
DESCRIPTION: Economic tools influencing the success of strategy (creation and appropriation of value) emphasizing application of economic theory to management of practice.

Course Outcomes
- Develop strategic reasoning ability.
- Develop competent understanding of competitive environments, competitive rivalry, cost, entry, and demand and supply.
- Demonstrate team skills through active participation in group discussions and projects and the assumption and exercise of responsibility in a collaborative mode.
- Acquire skill in applying the tools of economic analysis to management problems.

ORG B 321 : Organizational Effectiveness. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
PREREQUISITE: For Marriott School of Management majors only.
DESCRIPTION: Theories and concepts for creating effective organizations, e.g., individual, group, and organizational processes and human resource functions, including selection, compensation, and performance management.

Course Outcomes
- Students will know how to explain and discuss the characteristics of an effective organization and how to create them, how to attract and train an effective workforce, how to motivate employees to accomlish the organization's goals, and how to create a productive work environment.
- Students will be able to effectively work in a team.
- The students will learn how to manage change effectively.

10. Complete the following after IS 401, 402, 403, 404, 411, 413, 414, 415:

BUS M 498 : Strategic Management. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Major status; Management Integrated Core.
DESCRIPTION: Concepts, tools, and approaches to understand competitive forces and to systematically and consistently develop sustainable competitive advantages.

Course Outcomes
- Demonstrate knowledge of and ability to apply key strategic management concepts (strategy framework, external analysis [industry, competition, customers], resource & capabilities analysis, and strategies for growth and innovation).
- Utilize concepts to develop coherent strategic plans and recommendations for a business or organization.
- Demonstrate the ability to implement a coherent strategy by utilizing information from all business areas

and functions (strategy, marketing, finance, accounting, operations, and HR) and making decisions in each of those areas.
- Use appropriate analytical, critical thinking, and creative problem solving skills when confronted with a business situation or problem.
- Demonstrate the ability to communicate orally and in writing regarding strategy topics in ways that meet the MCOM 320 criteria.
- Work effectively as a part of a team.

11. Complete Marriott School exit survey online.

Recommended:

MATH 118 : Finite Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110.

DESCRIPTION: Language of set theory, counting and combinations. Probability theory, elementary stochastic processes, conditional probabilities. Repeated experiments, random variables, expectation, variance, linear equations, matrix algebra, application to economics or similar. Linear programming. Markov chains including applications.

Course Outcomes
- Prepares students for a broad range of applications in business, the life sciences, and the social sciences.For more detailed information visit the Math 118 Wiki page.

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes
- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

*Hours include courses that may fulfill university core requirements.

Undergraduate Courses

100-Level Courses

IS 100 : Computer Spreadsheet Skills. (.5:0:1)

WHEN TAUGHT: Spring; Summer

DESCRIPTION: Basic computer skills, focusing on spreadsheet and database programs. No technical background necessary.

Course Outcomes

- Students will be able to construct an Excel Spreadsheet with appropriate formulas, functions, labels, charts, media inserts, hyperlinks, and data base functions – and output the report.

IS 102 : Business Analysis Using Spreadsheets. (.5:1:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: IS 100.

DESCRIPTION: Basic computer skills focusing on features in MS Excel such as Scenario Manager, Solver, Pivot Tables, and Macros to solve complex business problems.

Course Outcomes

- Build robust spreadsheet models of business problems to make rational, data-driven managerial recommendations effectively solving those problems.
- Manipulate spreadsheet models of business problems to examine the robustness of proposed solutions to those problems.
- Implement macro programming techniques for automating spreadsheets to create flexible and powerful spreadsheet models of business problems.

IS 199R : Academic Internship: Information Systems. (.5-3:ARR:ARR)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Selection of information systems emphasis in Marriott School of Management.

DESCRIPTION: Approved on-the-job experience. Applying classroom theory and technology to actual problems; exploring career opportunities; learning role of information systems in business environment.

NOTE: P/F grade.

Course Outcomes

There are no course outcomes available

200-Level Courses

IS 201 : Introduction to Management Information Systems. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: IS 100 and IS 102.

DESCRIPTION: Using technology to solve business problems. Hands-on spreadsheet, database, and Internet software in a business context.

Course Outcomes

- Manipulate and analyze data to make appropriate recommendations for managerial decision-making.
- Design, build, and query a database to apply correct principles of data storage and extraction.
- Develop effective personal computer and Internet search skills.

300-Level Courses

IS 303 : Introduction to Computer Programming. (3:3:0)

WHEN TAUGHT: Winter; Spring

DESCRIPTION: Object-oriented program design and development. Principles of algorithm formulation and implementation.

Course Outcomes

- Master essential programming concepts and Java syntax.
- Develop critical thinking skills through using programming logic to solve business processing problems.
- Written communication: Learn the standard syntax for Java programs.

400-Level Courses

IS 401 : Systems Analysis. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Admission to information systems major, concurrent enrollment in same section of IS 402, 403, and 414.

DESCRIPTION: Early phases of systems development life cycle, including project management, planning, investigation, requirements definition, systems specifications, alternative selection. Tools and techniques of object-oriented analysis.

Course Outcomes

- Learn to work in groups and be part of an effective team. Demonstrate your skills by delivering a semester-long systems analysis and design project, followed by a week-long, intensive integrative exercise.
- Learn to communicate effectively, both orally and in writing. Learn the standard symbols and notation for expressing systems as UML diagrams. Learn to make a professional presentation to management regarding the artifacts you produce.
- Develop a sense of ethical values that translate into the business community, especially with regard to the ethics expected of an information systems professional.
- Course content: Master the essential subject matter of object-oriented systems analysis and design.
- Further your technology skills by learning to use tools that support the fundamental tasks of a systems analyst. This semester we will use a new online collaborative diagramming tool, LucidChart, to create UML diagrams. We will also learn to use Microsoft products such as Visio and Project.

IS 402 : Database Systems. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Admission to information systems major; concurrent enrollment in same section of IS 401, 403, and 414.

DESCRIPTION: Concepts and techniques of database system development, focusing on object-oriented modeling and its implementation methods.

Course Outcomes

- Master essential database concepts.
- Develop critical thinking skills through producing conceptual data models and solving relational algebra and SQL query problems.
- Learn the standard symbols and notation for data modeling and relational database design. Demonstrate this knowledge in conceptual and relational data models.
- Learn to work well with one or more partners on a major data modeling assignment. On a larger team, complete a major project in the integrative exercise (INTEX).

IS 403 : Principles of Business Programming. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Admission to information systems major; concurrent enrollment in same section of IS 401, 402, and 414.

DESCRIPTION: Programming business systems. Algorithms, data structures, programming patterns, and interfaces.

Course Outcomes

- Read current events and think critically about them as an IS professional. You'll be given a weekly quiz on current events, and we'll routinely discuss them in class.
- Create clear and elegant programs to solve IS problems. As the primary programming class in the Information Systems program, you'll practice your programming skills this semester. We'll focus on efficient, clear, and elegant solutions to the problems.
- Become proficient in using Internet resources to solve development problems. One of the most important skills in Information Systems is knowing how to find solutions in Internet groups, discussion boards, blogs, tutorials, and other online documentation sources. We'll practice this skill throughout the semester.
- Learn object-oriented programming principles, data structures, and libraries. The subject matter of the course is object-oriented programming in the Java language. - Understand how to read and effectively use technical documentation. We'll explore the Javadoc documentation for the Java libraries.

IS 404 : Data Communications. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: Admission to information systems major; concurrent enrollment in same section of IS 411, 413, and 415.

DESCRIPTION: Principles of data communications, local- and wide-area networks, hardware, software, media, standards, management, and business applications.

Course Outcomes

- Develop an understanding of data communications and network systems in general and specifically be able to:Set up and configure basic network components including systems and firewalls.Understand basic protocols in TCP/IP network stack.Understand and be able to setup and configure basic network services.
- Ability to solve specific problems using their understanding gained during the course.
- Converse competently with IT professionals who specialize in data communications. Understand and debate current data communications issues.

IS 411 : Systems Design and Implementation. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: IS 401 & IS 402 & IS 403

DESCRIPTION: Later phases of systems development life cycle. System architecture, user interfaces, system interface, and application design. Testing and integration. Object-oriented development.

Course Outcomes

- Master essential system design concepts and patterns.
- Develop critical thinking skills through producing sound system designs to solve specific business systems processing problems.
- Learn the standard UML symbols and notation for system design.
- Learn to work well as a member and leader of a team in developing designs on multiple projects.

IS 413 : Enterprise Application Development. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: IS 401 & IS 402 & IS 403

DESCRIPTION: Client- and server-side programming. Internet and Web-based applications. Enterprise systems and architectures.

Course Outcomes

- Read current events and think critically about them as an IS professional. You'll be given a weekly quiz on current events, and we'll routinely discuss them in class.
- Learn to develop information systems within group settings. The entire semester is based around INTEX II, an intense, group project. You'll need to develop a complex information system clear through implementation and testing.
- Work as leaders and as group members in development teams. You should have opportunity during the semester to work as leader of your team as well as a regular group member. For each phase of the project, pick a leader who will make sure things happen as they should.
- Develop time management expertise within intense development projects. The project this semester will be intense--just like projects are in the real world. The semester will give you a chance to further develop your time management skills.
- Learn enterprise system development principles and patterns. We'll use best practices models and methods of enterprise development, such as business objects, data layers, and object-relational mappings to develop the project.

IS 414 : Business Processes and Controls. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Information systems majors status; concurrent enrollment in same section of IS 401, 402, and 403.

RECOMMENDED: Acc 210.

DESCRIPTION: Enterprise-level systems that support basic business processes, information systems control and security issues, systems integration and deployment.

Course Outcomes

- Analyze a set of business processes and report control deficiencies -- Evaluated through a cycle report, homework, quizzes, and exams.
- Evaluate the appropriateness of various controls -- Evaluated through homework, quizzes, and exams.
- Communicate effectively both in writing and in presentations -- Evaluated through the cycle report.

IS 415 : Information Systems Capstone Project. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: IS 401 & IS 402 & IS 403

DESCRIPTION: Applying concepts, principles, and methods of enterprise-level information systems by designing and developing a full-scale system including hardware, software, and network.

Course Outcomes

- Master essential analysis, design, and programming concepts.
- Develop critical thinking skills through solving project problems individually and with a group.
- Produce project and system documentation at technical and management levels.
- Learn to work well as a member of a team in developing a functioning business processing system.

Admission to Degree Program

Most of the degree programs in the Marriott School of Management carry special enrollment limitations. Please see the advisement center for specific details.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

Undergraduate Programs and Degrees

- **Entrepreneurship Emphasis** (Program Outcomes)
- **General Business Emphasis** (Program Outcomes)
- **Global Supply Chain Management Emphasis** (Program Outcomes)
- **Marketing Management Emphasis** (Program Outcomes)
- **Organizational Behavior/HR Management Emphasis** (Program Outcomes)
- **Strategy Emphasis** (Program Outcomes)

Minor in Global Business and Literacy
Minor in Management
Minor in Strategy

Certificate in Global Management

For information on accounting, finance, information systems, or recreation management degrees, see School of Accountancy, Finance Department, Information Systems, or Recreation Management departments.

Students should see their college advisement center for help or information concerning the undergraduate programs.

Graduate Programs and Degrees

MAcc in Professional Accountancy
MAcc in Tax
MBA in Business Administration
MISM in Information Systems Management
MPA in Public Administration

Individual program brochures are available from the Marriott School of Management, 730 TNRB, Brigham Young University, Provo, UT 84602-3113. Also refer to the BYU 2013–2014 Graduate Catalog.

Engineering/Technology Management Degree Program

See Marriott School of Management in the BYU 2013–2014 Graduate Catalog and the Ira A. Fulton College of Engineering and Technology Advisement Center.

The Discipline

Courses are designed to create opportunities for students to develop and apply their analytical and decision-making abilities. For this reason, the Marriott School programs make extensive use of faculty expertise, case studies, student projects, and internships.

Career Opportunities

Specific job descriptions are many and varied. Some examples are: banker, consultant, financial analyst, credit analyst, real estate developer, financial planner, human resource specialist, employee benefit specialist, personnel officer, business systems consultant/analyst, sales representative, account executive, research specialist, marketing analyst, management trainee, buyer, merchandiser, production manager, technical sales person, inventory manager, logistics manager, materials supervisor.

Application Information

This is a limited-enrollment program requiring departmental admissions approval. Please see the college advisement center for information regarding requirements for admission to this major.

Students are encouraged to apply to the Marriott School of Management during their sophomore year, as soon as they have completed the pre-management core courses.

Because of controlled enrollments in management programs, the competition for acceptance is keen. Those choosing to enter these majors should decide early, plan their schedules carefully, be aware of all the requirements, and stay informed about any changes by checking often with the Marriott School of Management Advisement Center.

Students interested in management as a major must make application for the management major. A separate application to the School of Accountancy, Finance Department, or Information Systems Department is necessary for those seeking an accounting, finance, or information systems major. Students not accepted into the program should work closely with advisement personnel to select a new major outside the Marriott School.

To be eligible for admission, cumulative GPA must be at least 3.0 in the pre-management courses, with no more than one repeat for each class. No grade lower than a C– will be acceptable.

Not every student meeting the minimum requirements is guaranteed acceptance into the undergraduate program.

To see application information, see the college advisement center.

BS in Management: Entrepreneurship Emphasis (64 hours*)

Show All Course Descriptions
Hide All Course Descriptions

This is a limited-enrollment program requiring departmental admissions approval. Please see the college advisement center for information regarding requirements for admission to this emphasis.

The entrepreneurship emphasis is designed to acquaint students with the problems commonly encountered when starting, growing, and harvesting business ventures. Emphasis is on the entrepreneurial career and perspective, not on one-shot ventures.

Program Requirements | View MAP | View Program Outcomes

1. No more than 12 semester hours of upper-division transfer credit will be accepted toward the major and only 6 hours beyond the Integrated Management Core. No transfer courses will be accepted for the Integrated Management Core courses.
2. Only courses sufficient for a single emphasis are permitted.
3. Complete the following prerequisite courses:

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.
DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

Course Outcomes
- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.
- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

BUS M 241 : Marketing Management. (3:3:0)

OFFERED: Independent Study also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Marketing's role in society and the firm, marketing opportunities, the consumer market, and management of marketing mix.

Course Outcomes
- Understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers.
- Describe how specific firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Design a marketing plan for a new venture by applying the appropriate tools and approaches studied

ECON 110 : Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
There are no course outcomes available

: Honors Economic Principles and Problems.

Course Outcomes

FIN 201 : Principles of Finance. (3:3:1.5)

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: Acc 200.

DESCRIPTION: Financial management from the viewpoint of the business manager emphasizing profitability, liquidity, and long-range financial planning.

Course Outcomes

There are no course outcomes available

IS 100 : Computer Spreadsheet Skills. (.5:0:1)

WHEN TAUGHT: Spring; Summer

DESCRIPTION: Basic computer skills, focusing on spreadsheet and database programs. No technical background necessary.

Course Outcomes

- Students will be able to construct an Excel Spreadsheet with appropriate formulas, functions, labels, charts, media inserts, hyperlinks, and data base functions – and output the report.

IS 102 : Business Analysis Using Spreadsheets. (.5:1:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: IS 100.

DESCRIPTION: Basic computer skills focusing on features in MS Excel such as Scenario Manager, Solver, Pivot Tables, and Macros to solve complex business problems.

Course Outcomes

- Build robust spreadsheet models of business problems to make rational, data-driven managerial recommendations effectively solving those problems.
- Manipulate spreadsheet models of business problems to examine the robustness of proposed solutions to those problems.
- Implement macro programming techniques for automating spreadsheets to create flexible and powerful spreadsheet models of business problems.

Note: Based on student performance to date, permission may be granted to take some restricted major-only courses.

4. Apply and be formally accepted into the program.
5. Complete the following courses during your first semester admitted to the Marriott School of Management:

BUS M 320 : Career Orientation and Preparation. (.5:1:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Acceptance into Marriott School.

DESCRIPTION: Student orientation and preparation for careers in management.

NOTE: Must be taken first semester in Marriott School.

Course Outcomes

- Introduce students to the resources, services, and opportunities available in the Marriott School and provide skills that will help them in their job search
- Create a Career Plan that will direct students to their “first job” and “future career” and research sources to help narrow down their interests into a future career
- Explain the various emphases and programs in the Marriott School and the opportunities that each one offers
- Direct students in creating a resume, refining interviewing skills, and understanding the importance of networking.

BUS M 321 : Mentor Program. (.5:0:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Acceptance into Marriott School.

DESCRIPTION: Discussions with outside mentor about career opportunities.

NOTE: Must be taken first semester in Marriott School.

Course Outcomes

- Understand the importance of networking as they interact with professionals in the student's area of interest as well as learn from the perspective of a business professional.
- Develop the skill of networking and learn the value of mentoring as they interact with the mentor in an interview experience and discuss various topics with the mentor.

6. Complete the following required courses before the integrated core:

M COM 320 : Communication in Organizational Settings. (3:3:1)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: GE First-Year Writing requirement. To be taken before senior year. Not for freshmen.

DESCRIPTION: Developing written and oral communications for professional organizations, including composing and designing employment communications. Incorporates oral presentations.

NOTE: Fulfills GE Advanced Written and Oral Communication requirement.

Course Outcomes

- Compose various commonly occurring business texts, achieving effectiveness in design, organization, content, and style.
- Demonstrate knowledge of generally accepted grammar standards (from Writing & Speaking for Business).
- Give effective oral presentations with appropriate visual support, achieving effectiveness in message, media, and messenger.
- Create effective business graphics and implement effective visual-design principles.

: Honors Communication in Organizational Settings.

Course Outcomes

MATH 116 : Essentials of Calculus. (1:2:0)

WHEN TAUGHT: Spring; Summer

PREREQUISITE: Math 110.

DESCRIPTION: Review of algebra, graph of line, slope. Limits and derivatives (standard functions, compositions of such functions), derivative for polynomials, exponentials, logarithms. Product, quotient and chain rule. Optimization (extrema), application to business problems. Newton's method.

Course Outcomes

- Students receive a brief overview of differential calculus. Topics covered include limits, derivatives, and applications of differentiation to optimization of functions.For more detailed information visit the Math 116 Wiki page.

MATH 118 : Finite Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110.

DESCRIPTION: Language of set theory, counting and combinations. Probability theory, elementary stochastic processes, conditional probabilities. Repeated experiments, random variables, expectation, variance, linear equations, matrix algebra, application to economics or similar. Linear programming. Markov chains including applications.

Course Outcomes

- Prepares students for a broad range of applications in business, the life sciences, and the social sciences.For more detailed information visit the Math 118 Wiki page.

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

7. Complete the following Integrated Management Core courses plus entrepreneurship course:

BUS M 361 : Introduction to Supply Chain and Operations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Acceptance into the Marriott School.

DESCRIPTION: Managing and designing processes and people along the value chain.

Course Outcomes

There are no course outcomes available

BUS M 387 : Economics of Strategy. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Major or strategy minor status.

DESCRIPTION: Economic tools influencing the success of strategy (creation and appropriation of value)

emphasizing application of economic theory to management of practice.

Course Outcomes
- Develop strategic reasoning ability.
- Develop competent understanding of competitive environments, competitive rivalry, cost, entry, and demand and supply.
- Demonstrate team skills through active participation in group discussions and projects and the assumption and exercise of responsibility in a collaborative mode.
- Acquire skill in applying the tools of economic analysis to management problems.

BUS M 390 : Ethics for Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Premanagement and Management 1 cores and full acceptance into the Marriott School upper-division major.

DESCRIPTION: Analyzing ethical dilemmas and understanding ethical theories as they apply to decision making in management.

Course Outcomes
- Identify and address common ethical issues that arise for individuals, managers, and organizations.
- Use contemporary and classic frameworks to analyze and suggest resolutions to ethical dilemmas.
- Recognize how individual differences and cognitive barriers can influence ethical judgment.
- Identify key organizational tools, policies, systems, and laws that apply to managing ethical conduct.
- Identify and prioritize personal values and apply those to making ethical decisions.

BUS M 470 : Entrepreneurial Innovation. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Major status.

DESCRIPTION: Finding and validating ideas for innovative new ventures with a focus on customer pain, elegant solutions, and markets.

Course Outcomes
There are no course outcomes available

ORG B 321 : Organizational Effectiveness. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

PREREQUISITE: For Marriott School of Management majors only.

DESCRIPTION: Theories and concepts for creating effective organizations, e.g., individual, group, and organizational processes and human resource functions, including selection, compensation, and performance management.

Course Outcomes
- Students will know how to explain and discuss the characteristics of an effective organization and how to create them, how to attract and train an effective workforce, how to motivate employees to accomlish the organization's goals, and how to create a productive work environment.
- Students will be able to effectively work in a team.
- The students will learn how to manage change effectively.

8. Complete the following courses:

ACC 241 : Business Law in the Environment. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Marriott School of Management major status.

DESCRIPTION: Introduction to legal principles and institutions affecting business.

Course Outcomes
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for the following topics: sources of law, courts and their procedures, jurisdiction, crimes, and torts.
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for: contract formation, defects in agreement, the statute of frauds and the parole evidence rule, third party rights, and breach/remedies.
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for: agency formation and termination, partnerships, LLC's, and corporate formation and operation.
- Apply ethical principles to legal problems.

BUS M 371R : Entrepreneurship Lecture Series. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Lectures by successful entrepreneurs on subjects significant to entrepreneur-type opportunities.

Course Outcomes
- Recognize and resolve ethical challenges and choices in specific organizational contexts.
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life

IS 201 : Introduction to Management Information Systems. (3:3:1)

WHEN Fall; Winter; Spring; Summer

TAUGHT:
PREREQUISITE: IS 100 and IS 102.
DESCRIPTION: Using technology to solve business problems. Hands-on spreadsheet, database, and Internet software in a business context.

Course Outcomes
- Manipulate and analyze data to make appropriate recommendations for managerial decision-making.
- Design, build, and query a database to apply correct principles of data storage and extraction.
- Develop effective personal computer and Internet search skills.

9. Complete the following after the Integrated Management Core has been completed:

BUS M 498 : Strategic Management. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Major status; Management Integrated Core.
DESCRIPTION: Concepts, tools, and approaches to understand competitive forces and to systematically and consistently develop sustainable competitive advantages.

Course Outcomes
- Demonstrate knowledge of and ability to apply key strategic management concepts (strategy framework, external analysis [industry, competition, customers], resource & capabilities analysis, and strategies for growth and innovation).
- Utilize concepts to develop coherent strategic plans and recommendations for a business or organization.
- Demonstrate the ability to implement a coherent strategy by utilizing information from all business areas and functions (strategy, marketing, finance, accounting, operations, and HR) and making decisions in each of those areas.
- Use appropriate analytical, critical thinking, and creative problem solving skills when confronted with a business situation or problem.
- Demonstrate the ability to communicate orally and in writing regarding strategy topics in ways that meet the MCOM 320 criteria.
- Work effectively as a part of a team.

10. Complete the following emphasis course:

BUS M 471 : Creating New Ventures. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: BUS M 470
DESCRIPTION: Learning the critical skills to create a successful new venture by validating an initial idea and business model in the field.

Course Outcomes
There are no course outcomes available

11. Complete four additional entrepreneurship courses from the following:

BUS M 454 : Professional Selling and Sales Management. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: BUS M 241; or BUS M 341; Major status.
DESCRIPTION: Concepts of professional selling and sales management including personal selling skills; strategic role of personal selling; organizing, directing, controlling, and evaluating the sales force.

Course Outcomes
- To demonstrate a professional orientation toward professional selling.
- To develop communication skills to effectively sell your ideas, products, and services "without making an enemy."
- To gain sales leadership skills that will influence personal and professional life.

BUS M 457 : Internet Marketing of Products and Services. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: BUS M 241; or BUS M 341; Major status.
DESCRIPTION: Integrates product, research, sales, and promotional strategy and concepts into an overall marketing plan for developing an Internet business. Term project developing an Internet business required.

Course Outcomes
- Understand the similarities and differences among various ecommerce business models, including online retail, online media, lead generation, and online marketplaces.
- Understand how search engines work. Use this knowledge to make recommendations to a website on how it can improve its organic search rankings – in other words, perform search engine optimization on a website.
- Understand the mechanics of paid search ranking. Create a search engine marketing campaign and evaluate its effectiveness. Recommend changes that will improve the campaign's conversion rates.

BUS M 462 : Services Management. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: BUS M 361; Major status.
DESCRIPTION: Management principles and characteristics of service industries and service aspects of supply

chains: sources of strategic advantage; process analysis and tools; quality.

Course Outcomes
- Learn principles that lead to successful services management.
- Understand analytical frameworks that provide rigor to your study of services.
- Apply service principles and analytical frameworks to actual business situations.
- Complete an enrichment project that demonstrates your ability to use your knowledge in making significant business decisions.

BUS M 472 : Entrepreneurial Marketing. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: BUS M 341; or BUS M 241; Major status.

DESCRIPTION: Marketing strategies for start-up companies. Topics include marketing to investors, internal marketing, and how to market products/services without a marketing budget.

Course Outcomes
- Exhibit knowledge of basic entrepreneurial marketing skills—learn how to make "competitive angles" that make competitors irrelevant.
- Be able to introduce new products and formulate marketing tactics for startup companies on a limited budget.
- Develop the mindset and qualitative and quantitative skills to effectively become a marketing consultant for startup firms.

BUS M 475 : Financing New Ventures. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Business management core; major status.

DESCRIPTION: Concepts and skills of entrepreneurship, emphasizing how new and emerging companies are financed. Applying functional tools to case situations.

Course Outcomes
- Apply the entrepreneurial perspective to make better decisions in analyzing or creating a business venture.
- Apply effective entrepreneurial and general management practices from the perspectives of the founder and vital stakeholders.
- Analyze business opportunities and develop them into investment grade businesses.

BUS M 476 : New Venture LaunchPad. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Major status.

DESCRIPTION: Launching actual new ventures. Mentored learning of idea validation, business models, minimum viable products, and financing plans. Good preparations for participating in BYU's entrepreneurial competitions.

Course Outcomes
There are no course outcomes available

BUS M 538 : Managing Entrepreneurial Firms and Family Businesses. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Issues and problems facing managers of entrepreneurial enterprises and leaders of family-owned businesses. Includes start-up, growth, and exit strategies. Consulting project required.

Course Outcomes
- Describe the three systems of an entrepreneurial firm: Business, Family, and Governance
- Recommend specific ways to improve each of the systems of an entrepreneurial firm.
- Each student should be able to diagnose the problems that a family business and/or entrepreneurial firm has concerning the business, governance, and family systems.
- Be able to articulate recommendations to solve those problems.

FIN 413 : Real Estate Finance and Investment. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: BUS M 401 & ACC 440; or FIN 401 & ACC 440; Finance junior core.

DESCRIPTION: Terminology, concepts, principles, and analytical techniques related to financing of and investment in real estate.

Course Outcomes
There are no course outcomes available

12. Complete Marriott School exit survey online.

*Hours include courses that may fulfill university core requirements.

BS in Management: General Business Emphasis (64 hours*)

Show All Course Descriptions
Hide All Course Descriptions

This is a limited-enrollment program requiring departmental admissions approval. Please see the college advisement center for information regarding requirements for admission to this emphasis.

The general business, or open, emphasis is available to students wishing to design their own program to meet specific goals such as working in a family business or preparing for a graduate program.

Program Requirements | View MAP | View Program Outcomes

1. No more than 12 semester hours of upper-division transfer credit will be accepted toward the major and only 6 hours beyond the Integrated Management Core. No transfer courses will be accepted for the Integrated Management Core courses.
2. Only courses sufficient for a single emphasis are permitted.
3. Complete the following prerequisite courses:

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.
DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

Course Outcomes
- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.
- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

BUS M 241 : Marketing Management. (3:3:0)

OFFERED: Independent Study also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Marketing's role in society and the firm, marketing opportunities, the consumer market, and management of marketing mix.

Course Outcomes
- Understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers.
- Describe how specific firms (1) select target markets, (2) specify their marketing mix, and (3) attempt to attract and retain the right customers.
- Design a marketing plan for a new venture by applying the appropriate tools and approaches studied

ECON 110 : Economic Principles and Problems. (3:3:0)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.
NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
There are no course outcomes available

: Honors Economic Principles and Problems.

Course Outcomes

FIN 201 : Principles of Finance. (3:3:1.5)

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: Acc 200.

DESCRIPTION: Financial management from the viewpoint of the business manager emphasizing profitability, liquidity, and long-range financial planning.

Course Outcomes

There are no course outcomes available

IS 100 : Computer Spreadsheet Skills. (.5:0:1)

WHEN TAUGHT: Spring; Summer

DESCRIPTION: Basic computer skills, focusing on spreadsheet and database programs. No technical background necessary.

Course Outcomes

- Students will be able to construct an Excel Spreadsheet with appropriate formulas, functions, labels, charts, media inserts, hyperlinks, and data base functions – and output the report.

IS 102 : Business Analysis Using Spreadsheets. (.5:1:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: IS 100.

DESCRIPTION: Basic computer skills focusing on features in MS Excel such as Scenario Manager, Solver, Pivot Tables, and Macros to solve complex business problems.

Course Outcomes

- Build robust spreadsheet models of business problems to make rational, data-driven managerial recommendations effectively solving those problems.
- Manipulate spreadsheet models of business problems to examine the robustness of proposed solutions to those problems.
- Implement macro programming techniques for automating spreadsheets to create flexible and powerful spreadsheet models of business problems.

Note: Based on student performance to date, permission may be granted to take some restricted major-only courses.

4. Apply and be formally accepted into the program.
5. Complete the following courses during your first semester admitted to the Marriott School of Management:

BUS M 320 : Career Orientation and Preparation. (.5:1:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Acceptance into Marriott School.

DESCRIPTION: Student orientation and preparation for careers in management.

NOTE: Must be taken first semester in Marriott School.

Course Outcomes

- Introduce students to the resources, services, and opportunities available in the Marriott School and provide skills that will help them in their job search
- Create a Career Plan that will direct students to their “first job” and “future career” and research sources to help narrow down their interests into a future career
- Explain the various emphases and programs in the Marriott School and the opportunities that each one offers
- Direct students in creating a resume, refining interviewing skills, and understanding the importance of networking.

BUS M 321 : Mentor Program. (.5:0:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Acceptance into Marriott School.

DESCRIPTION: Discussions with outside mentor about career opportunities.

NOTE: Must be taken first semester in Marriott School.

Course Outcomes

- Understand the importance of networking as they interact with professionals in the student's area of interest as well as learn from the perspective of a business professional.
- Develop the skill of networking and learn the value of mentoring as they interact with the mentor in an interview experience and discuss various topics with the mentor.

6. Complete the following required courses before the integrated core:

M COM 320 : Communication in Organizational Settings. (3:3:1)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: GE First-Year Writing requirement. To be taken before senior year. Not for freshmen.

DESCRIPTION: Developing written and oral communications for professional organizations, including composing and designing employment communications. Incorporates oral presentations.

NOTE: Fulfills GE Advanced Written and Oral Communication requirement.

Course Outcomes

- Compose various commonly occurring business texts, achieving effectiveness in design, organization, content, and style.
- Demonstrate knowledge of generally accepted grammar standards (from Writing & Speaking for Business).
- Give effective oral presentations with appropriate visual support, achieving effectiveness in message, media, and messenger.
- Create effective business graphics and implement effective visual-design principles.

: Honors Communication in Organizational Settings.

Course Outcomes

MATH 116 : Essentials of Calculus. (1:2:0)

WHEN TAUGHT: Spring; Summer

PREREQUISITE: Math 110.

DESCRIPTION: Review of algebra, graph of line, slope. Limits and derivatives (standard functions, compositions of such functions), derivative for polynomials, exponentials, logarithms. Product, quotient and chain rule. Optimization (extrema), application to business problems. Newton's method.

Course Outcomes

- Students receive a brief overview of differential calculus. Topics covered include limits, derivatives, and applications of differentiation to optimization of functions.For more detailed information visit the Math 116 Wiki page.

MATH 118 : Finite Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110.

DESCRIPTION: Language of set theory, counting and combinations. Probability theory, elementary stochastic processes, conditional probabilities. Repeated experiments, random variables, expectation, variance, linear equations, matrix algebra, application to economics or similar. Linear programming. Markov chains including applications.

Course Outcomes

- Prepares students for a broad range of applications in business, the life sciences, and the social sciences.For more detailed information visit the Math 118 Wiki page.

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

7. Complete the following Integrated Management Core courses:

BUS M 361 : Introduction to Supply Chain and Operations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Acceptance into the Marriott School.

DESCRIPTION: Managing and designing processes and people along the value chain.

Course Outcomes

There are no course outcomes available

BUS M 387 : Economics of Strategy. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Major or strategy minor status.

DESCRIPTION: Economic tools influencing the success of strategy (creation and appropriation of value)

emphasizing application of economic theory to management of practice.

Course Outcomes
- Develop strategic reasoning ability.
- Develop competent understanding of competitive environments, competitive rivalry, cost, entry, and demand and supply.
- Demonstrate team skills through active participation in group discussions and projects and the assumption and exercise of responsibility in a collaborative mode.
- Acquire skill in applying the tools of economic analysis to management problems.

BUS M 390 : Ethics for Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Premanagement and Management 1 cores and full acceptance into the Marriott School upper-division major.

DESCRIPTION: Analyzing ethical dilemmas and understanding ethical theories as they apply to decision making in management.

Course Outcomes
- Identify and address common ethical issues that arise for individuals, managers, and organizations.
- Use contemporary and classic frameworks to analyze and suggest resolutions to ethical dilemmas.
- Recognize how individual differences and cognitive barriers can influence ethical judgment.
- Identify key organizational tools, policies, systems, and laws that apply to managing ethical conduct.
- Identify and prioritize personal values and apply those to making ethical decisions.

ORG B 321 : Organizational Effectiveness. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

PREREQUISITE: For Marriott School of Management majors only.

DESCRIPTION: Theories and concepts for creating effective organizations, e.g., individual, group, and organizational processes and human resource functions, including selection, compensation, and performance management.

Course Outcomes
- Students will know how to explain and discuss the characteristics of an effective organization and how to create them, how to attract and train an effective workforce, how to motivate employees to accomlish the organization's goals, and how to create a productive work environment.
- Students will be able to effectively work in a team.
- The students will learn how to manage change effectively.

8. Complete the following courses:

ACC 241 : Business Law in the Environment. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Marriott School of Management major status.

DESCRIPTION: Introduction to legal principles and institutions affecting business.

Course Outcomes
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for the following topics: sources of law, courts and their procedures, jurisdiction, crimes, and torts.
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for: contract formation, defects in agreement, the statute of frauds and the parole evidence rule, third party rights, and breach/remedies.
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for: agency formation and termination, partnerships, LLC's, and corporate formation and operation.
- Apply ethical principles to legal problems.

IS 201 : Introduction to Management Information Systems. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: IS 100 and IS 102.

DESCRIPTION: Using technology to solve business problems. Hands-on spreadsheet, database, and Internet software in a business context.

Course Outcomes
- Manipulate and analyze data to make appropriate recommendations for managerial decision-making.
- Design, build, and query a database to apply correct principles of data storage and extraction.
- Develop effective personal computer and Internet search skills.

And complete one course from the following:

BUS M 371R : Entrepreneurship Lecture Series. (1:1:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Lectures by successful entrepreneurs on subjects significant to entrepreneur-type opportunities.

Course Outcomes
- Recognize and resolve ethical challenges and choices in specific organizational contexts.
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.

- Understand how leadership can be practiced at every level in an organization and at every stage of one's life

BUS M 380 : Executive Lectures. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: Lectures by top executives on subjects significant to executive leadership.

Course Outcomes

- Recognize and resolve ethical challenges and choices in specific organizational contexts.
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life.

BUS M 382 : Financial Services Lecture Series. (1:1:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Lectures by executives on financial services topics.

Course Outcomes

- · Recognize and resolve the typical ethical challenges that confront people working in financial services
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life.
- Understand the major career pathways that can be pursued with academic training in finance.

9. Complete the following after the Integrated Management Core:

BUS M 498 : Strategic Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Major status; Management Integrated Core.

DESCRIPTION: Concepts, tools, and approaches to understand competitive forces and to systematically and consistently develop sustainable competitive advantages.

Course Outcomes

- Demonstrate knowledge of and ability to apply key strategic management concepts (strategy framework, external analysis [industry, competition, customers], resource & capabilities analysis, and strategies for growth and innovation).
- Utilize concepts to develop coherent strategic plans and recommendations for a business or organization.
- Demonstrate the ability to implement a coherent strategy by utilizing information from all business areas and functions (strategy, marketing, finance, accounting, operations, and HR) and making decisions in each of those areas.
- Use appropriate analytical, critical thinking, and creative problem solving skills when confronted with a business situation or problem.
- Demonstrate the ability to communicate orally and in writing regarding strategy topics in ways that meet the MCOM 320 criteria.
- Work effectively as a part of a team.

10. Complete six 400-level approved Marriott School of Management courses.
11. Complete Marriott School exit survey online.

*Hours include courses that may fulfill university core requirements.

BS in Management: Global Supply Chain Management Emphasis (63–64 hours*)

Show All Course Descriptions
Hide All Course Descriptions

This is a limited-enrollment program requiring departmental admissions approval. Please see the college advisement center for information regarding requirements for admission to this emphasis.

Supply chain management involves the control and coordination of materials and services from the original point of origin to the final point of consumption. Increasing competitiveness through higher quality, lower cost, greater responsiveness, and unique innovation is a critical aspect of supply chain management. Likewise, managing across boundaries within the firm and throughout the channel is emphasized. Course work is designed to prepare students for managerial positions in manufacturing and service industries in the areas of purchasing, operations, logistics, customer service, and supply chain management.

Program Requirements | View MAP | View Program Outcomes

1. No more than 12 semester hours of upper-division transfer credit will be accepted toward the major and only 6 hours beyond the Integrated Management Core. No transfer courses will be accepted for the Integrated Management Core courses.
2. Only courses sufficient for a single emphasis are permitted.
3. Complete the following prerequisite courses:

ACC 200 : Principles of Accounting. (3:3:0)

OFFERED: Independent Study also.

DESCRIPTION: Financial and managerial accounting principles. Basic accounting statements, processes, and management applications. Open to all students.

Course Outcomes
- Construct and use internal accounting tools such as cost-volume-profit analysis, budgets, product cost reports, and nonroutine decision analyses to understand how to make better business management decisions.
- Construct and interpret a balance sheet and income statement understanding its usefulness in business and investment decision making.
- Comfortably use accounting terms and concepts in business-related discussions.
- Intelligently converse about the following areas:a. The role of accounting in international businessb. The role of information systems in financial reportingc. Fraud and how to prevent fraudd. The theory and practice of income taxese. Investing in stocksf. Career planning and spiritual decision makingg. Managerial accounting as a competitive toolh. Personal budgeting and financial planning
- Write a brief, focused memo demonstrating basic understanding of background business reading material.
- Use computer-aided learning tools and online learning resources.
- Manage workload in a self-paced learning environment.

BUS M 241 : Marketing Management. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Marketing's role in society and the firm, marketing opportunities, the consumer market, and management of marketing mix.

Course Outcomes
- Understand the fundamental components and tools of marketing and how each relates to creating and sustaining value for customers.

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Strengths and weaknesses of markets and governments for solving problems of social organization or conflict, including policy response to inflation, unemployment, pollution, poverty, growth, etc.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes
There are no course outcomes available

: Honors Economic Principles and Problems.

Course Outcomes

FIN 201 : Principles of Finance. (3:3:1.5)

WHEN TAUGHT: Fall; Winter; Spring; Summer
RECOMMENDED: Acc 200.
DESCRIPTION: Financial management from the viewpoint of the business manager emphasizing profitability, liquidity, and long-range financial planning.

Course Outcomes
There are no course outcomes available

IS 100 : Computer Spreadsheet Skills. (.5:0:1)

WHEN TAUGHT: Spring; Summer
DESCRIPTION: Basic computer skills, focusing on spreadsheet and database programs. No technical background necessary.

Course Outcomes
- Students will be able to construct an Excel Spreadsheet with appropriate formulas, functions, labels, charts, media inserts, hyperlinks, and data base functions – and output the report.

IS 102 : Business Analysis Using Spreadsheets. (.5:1:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: IS 100.
DESCRIPTION: Basic computer skills focusing on features in MS Excel such as Scenario Manager, Solver, Pivot Tables, and Macros to solve complex business problems.

Course Outcomes
- Build robust spreadsheet models of business problems to make rational, data-driven managerial recommendations effectively solving those problems.
- Manipulate spreadsheet models of business problems to examine the robustness of proposed solutions to those problems.
- Implement macro programming techniques for automating spreadsheets to create flexible and powerful spreadsheet models of business problems.

Note: Based on student performance to date, permission may be granted to take some restricted major-only courses.

4. Apply and be formally accepted into the program.

5. Complete the following courses during your first semester admitted to the Marriott School of Management:

BUS M 320 : Career Orientation and Preparation. (.5:1:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Acceptance into Marriott School.
DESCRIPTION: Student orientation and preparation for careers in management.
NOTE: Must be taken first semester in Marriott School.

Course Outcomes
- Introduce students to the resources, services, and opportunities available in the Marriott School and provide skills that will help them in their job search
- Create a Career Plan that will direct students to their “first job” and “future career” and research sources to help narrow down their interests into a future career
- Explain the various emphases and programs in the Marriott School and the opportunities that each one offers
- Direct students in creating a resume, refining interviewing skills, and understanding the importance of networking.

BUS M 321 : Mentor Program. (.5:0:0)

WHEN TAUGHT: Fall; Winter
PREREQUISITE: Acceptance into Marriott School.
DESCRIPTION: Discussions with outside mentor about career opportunities.
NOTE: Must be taken first semester in Marriott School.

Course Outcomes
- Understand the importance of networking as they interact with professionals in the student's area of interest as well as learn from the perspective of a business professional.
- Develop the skill of networking and learn the value of mentoring as they interact with the mentor in an interview experience and discuss various topics with the mentor.

6. Complete the following required courses before the integrated core:

M COM 320 : Communication in Organizational Settings. (3:3:1)

OFFERED: Honors also.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: GE First-Year Writing requirement. To be taken before senior year. Not for freshmen.

DESCRIPTION: Developing written and oral communications for professional organizations, including composing and designing employment communications. Incorporates oral presentations.

NOTE: Fulfills GE Advanced Written and Oral Communication requirement.

Course Outcomes

- Compose various commonly occurring business texts, achieving effectiveness in design, organization, content, and style.
- Demonstrate knowledge of generally accepted grammar standards (from Writing & Speaking for Business).
- Give effective oral presentations with appropriate visual support, achieving effectiveness in message, media, and messenger.
- Create effective business graphics and implement effective visual-design principles.

: Honors Communication in Organizational Settings.

Course Outcomes

MATH 116 : Essentials of Calculus. (1:2:0)

WHEN TAUGHT: Spring; Summer

PREREQUISITE: Math 110.

DESCRIPTION: Review of algebra, graph of line, slope. Limits and derivatives (standard functions, compositions of such functions), derivative for polynomials, exponentials, logarithms. Product, quotient and chain rule. Optimization (extrema), application to business problems. Newton's method.

Course Outcomes

- Students receive a brief overview of differential calculus. Topics covered include limits, derivatives, and applications of differentiation to optimization of functions.For more detailed information visit the Math 116 Wiki page.

MATH 118 : Finite Mathematics. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110.

DESCRIPTION: Language of set theory, counting and combinations. Probability theory, elementary stochastic processes, conditional probabilities. Repeated experiments, random variables, expectation, variance, linear equations, matrix algebra, application to economics or similar. Linear programming. Markov chains including applications.

Course Outcomes

- Prepares students for a broad range of applications in business, the life sciences, and the social sciences.For more detailed information visit the Math 118 Wiki page.

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

7. Complete the following Integrated Management Core courses:

BUS M 361 : Introduction to Supply Chain and Operations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Acceptance into the Marriott School.

DESCRIPTION: Managing and designing processes and people along the value chain.

Course Outcomes

There are no course outcomes available

BUS M 387 : Economics of Strategy. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Major or strategy minor status.
DESCRIPTION: Economic tools influencing the success of strategy (creation and appropriation of value) emphasizing application of economic theory to management of practice.

Course Outcomes
- Develop strategic reasoning ability.
- Develop competent understanding of competitive environments, competitive rivalry, cost, entry, and demand and supply.
- Demonstrate team skills through active participation in group discussions and projects and the assumption and exercise of responsibility in a collaborative mode.
- Acquire skill in applying the tools of economic analysis to management problems.

BUS M 390 : Ethics for Management. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: Premanagement and Management 1 cores and full acceptance into the Marriott School upper-division major.
DESCRIPTION: Analyzing ethical dilemmas and understanding ethical theories as they apply to decision making in management.

Course Outcomes
- Identify and address common ethical issues that arise for individuals, managers, and organizations.
- Use contemporary and classic frameworks to analyze and suggest resolutions to ethical dilemmas.
- Recognize how individual differences and cognitive barriers can influence ethical judgment.
- Identify key organizational tools, policies, systems, and laws that apply to managing ethical conduct.
- Identify and prioritize personal values and apply those to making ethical decisions.

ORG B 321 : Organizational Effectiveness. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department
PREREQUISITE: For Marriott School of Management majors only.
DESCRIPTION: Theories and concepts for creating effective organizations, e.g., individual, group, and organizational processes and human resource functions, including selection, compensation, and performance management.

Course Outcomes
- Students will know how to explain and discuss the characteristics of an effective organization and how to create them, how to attract and train an effective workforce, how to motivate employees to accomlish the organization's goals, and how to create a productive work environment.
- Students will be able to effectively work in a team.
- The students will learn how to manage change effectively.

8. Complete the following courses:

ACC 241 : Business Law in the Environment. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Marriott School of Management major status.
DESCRIPTION: Introduction to legal principles and institutions affecting business.

Course Outcomes
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for the following topics: sources of law, courts and their procedures, jurisdiction, crimes, and torts.
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for: contract formation, defects in agreement, the statute of frauds and the parole evidence rule, third party rights, and breach/remedies.
- Demonstrate a working knowledge of and the ability to analyze issues of law applied to relevant facts for: agency formation and termination, partnerships, LLC's, and corporate formation and operation.
- Apply ethical principles to legal problems.

IS 201 : Introduction to Management Information Systems. (3:3:1)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: IS 100 and IS 102.
DESCRIPTION: Using technology to solve business problems. Hands-on spreadsheet, database, and Internet software in a business context.

Course Outcomes
- Manipulate and analyze data to make appropriate recommendations for managerial decision-making.
- Design, build, and query a database to apply correct principles of data storage and extraction.
- Develop effective personal computer and Internet search skills.

And complete one course from the following:

BUS M 371R : Entrepreneurship Lecture Series. (1:1:0)
WHEN TAUGHT: Fall; Winter
DESCRIPTION: Lectures by successful entrepreneurs on subjects significant to entrepreneur-type opportunities.

Course Outcomes

Recognize and resolve ethical challenges and choices in specific organizational contexts.
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life

BUS M 380 : Executive Lectures. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: Lectures by top executives on subjects significant to executive leadership.

Course Outcomes
- Recognize and resolve ethical challenges and choices in specific organizational contexts.
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life.

BUS M 382 : Financial Services Lecture Series. (1:1:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Lectures by executives on financial services topics.

Course Outcomes
- · Recognize and resolve the typical ethical challenges that confront people working in financial services
- Strengthen one's commitment to living the principles of the restored gospel in all circumstances, personal and professional.
- Understand how leadership can be practiced at every level in an organization and at every stage of one's life.
- Understand the major career pathways that can be pursued with academic training in finance.

9. Complete the following after the Integrated Management Core has been completed:

BUS M 498 : Strategic Management. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Major status; Management Integrated Core.

DESCRIPTION: Concepts, tools, and approaches to understand competitive forces and to systematically and consistently develop sustainable competitive advantages.

Course Outcomes
- Demonstrate knowledge of and ability to apply key strategic management concepts (strategy framework, external analysis [industry, competition, customers], resource & capabilities analysis, and strategies for growth and innovation).
- Utilize concepts to develop coherent strategic plans and recommendations for a business or organization.
- Demonstrate the ability to implement a coherent strategy by utilizing information from all business areas and functions (strategy, marketing, finance, accounting, operations, and HR) and making decisions in each of those areas.
- Use appropriate analytical, critical thinking, and creative problem solving skills when confronted with a business situation or problem.
- Demonstrate the ability to communicate orally and in writing regarding strategy topics in ways that meet the MCOM 320 criteria.
- Work effectively as a part of a team.
